**Text 1**

A team led by Bernardo Strassburg has found that rewilding farmland (returning the land to its natural state) could help preserve biodiversity and offset carbon emissions. The amount of farmland that would need to be restored, they found, is remarkably low. Rewilding a mere 15% of the world's current farmland would prevent 60% of expected species extinctions and help absorb nearly 299 gigatons of carbon dioxide—a clear win in the fight against the biodiversity and climate crises.

**Text 2**

While Strassburg's team's findings certainly offer encouraging insight into the potential benefits of rewilding, it's important to consider potential effects on global food supplies. The researchers suggest that to compensate for the loss of food-producing land, remaining farmland would need to produce even more food. Thus, policies focused on rewilding farmland must also address strategies for higher-yield farming.

Which choice best describes a difference in how the author of Text 1 and the author of Text 2 view Strassburg's team's study?

- A. The author of Text 2 approaches the study's findings with some caution, whereas the author of Text 1 is optimistic about the reported potential environmental benefits.
- B. The author of Text 2 claims that the percentage of farmland identified by Strassburg's team is too low for rewilding to achieve meaningful results, whereas the author of Text 1 thinks the percentage is sufficient.
- C. The author of Text 2 believes that the results described by Strassburg's team are achievable in the near future, whereas the author of Text 1 argues that they likely aren't.

- D. The author of Text 2 focuses on rewilding's effect on carbon emissions, whereas the author of Text 1 focuses on its effect on biodiversity.

Q2

CRAFT AND STRUCTURE

The fashion resale market, in which consumers purchase secondhand clothing from stores and online sellers, generated nearly \$30 billion globally in 2019. Expecting to see continued growth, some analysts \_\_\_\_\_blank that revenues will more than double by 2028.

Which choice completes the text with the most logical and precise word or phrase?

- A. produced
- B. denied
- C. worried
- D. predicted

The following text is adapted from Jean Webster’s 1912 novel *Daddy-Long-Legs*. The narrator is a young college student writing letters detailing her weekly experiences.

[The college is] organizing the Freshman basket-ball team and there’s just a chance that I shall make it. I’m little of course, but terribly quick and wiry and tough. While the others are hopping about in the air, I can dodge under their feet and grab the ball.

Which choice best states the main purpose of the text?

- A. To compare basketball with other sports
- B. To provide details of how to play basketball
- C. To state how players will be chosen for the basketball team
- D. To explain why the narrator thinks she might make the basketball team

**Text 1**

Some animal species, like the leopard, can be found in many kinds of areas. On the other hand, tropical mountain bird species tend to be limited in the types of spaces they can call home. This is because many mountain bird species are only able to survive at very specific elevations. Over time, these species have likely become used to living at a specific temperature. Therefore, these species struggle to survive at elevations that are warmer or colder than they are used to.

**Text 2**

A new study reviewed observations of nearly 3,000 bird species to understand why tropical mountain bird species live at specific elevations. They noted that when a mountain bird species was found in an area with many other bird species, it tended to inhabit much smaller geographic areas. It is thus likely that competition for resources with other species, not temperature, limits where these birds can live.

Based on the texts, both authors would most likely agree with which statement?

- A. Tropical mountain bird species are restricted in where they can live.
- B. Scientists have better tools to observe tropical mountain birds than they did in the past.
- C. Little is known about how tropical mountain birds build their nests.
- D. Tropical mountain bird species that live at high elevations tend to be genetically similar.

The process of mechanically recycling plastics is often considered \_\_\_\_\_ blank because of the environmental impact and the loss of material quality that often occurs. But chemist Takunda Chazovachii has helped develop a cleaner process of chemical recycling that converts superabsorbent polymers from diapers into a desirable reusable adhesive.

Which choice completes the text with the most logical and precise word or phrase?

- A. resilient
- B. inadequate
- C. dynamic
- D. satisfactory

The following text is from Ameen Rihani's 1921 poem "The Wanderer."

I wander among the hills of alien lands  
Where Nature her prerogative resigns  
To Man; where Comfort in her shack reclines  
And all the arts and sciences commands.  
But in my soul  
The eastern billows roll—  
I hear the voices of my native strands.

Which choice best describes the function of the underlined lines in the text as a whole?

- A. It establishes that the speaker's enthusiasm about current travels conflicts with the growing urge to return home.
- B. It illustrates the speaker's uncertainty about maintaining strong links with relatives in distant places.
- C. It conveys the speaker's sense of feeling a pull toward home while traveling in an unfamiliar place.
- D. It reveals that upon returning after an extended absence, the speaker longs for the way a location once felt.

**Text 1**

In a study of insect behavior, Samadi Galpayage and colleagues presented bumblebees with small wooden balls and observed many of the bees clinging to, rolling, and dragging the objects. The researchers provided no external rewards (such as food) to encourage these interactions. The bees simply appeared to be playing—and for no other reason than because they were having fun.

**Text 2**

Insects do not have cortexes or other brain areas associated with emotions in humans. Still, Galpayage and her team have shown that bumblebees may engage in play, possibly experiencing some kind of positive emotional state. Other studies have suggested that bees experience negative emotional states (for example, stress), but as Galpayage and her team have acknowledged, emotions in insects, if they do indeed exist, are likely very rudimentary.

Based on the texts, how would the author of Text 2 most likely respond to the underlined portion of Text 1?

- A. By objecting that the bees were actually experiencing a negative feeling akin to stress rather than a positive feeling
- B. By arguing that some insects other than bumblebees may be capable of experiencing complex emotional states
- C. By pointing out that even humans sometimes struggle to have fun while engaging in play
- D. By noting that if the bees were truly playing, any positive feelings they may have experienced were probably quite basic

In the mid-nineteenth century, some abolitionist newspapers \_\_\_\_\_ blank westward migration in the United States; by printing a letter that described the easy fortunes and high salaries miners could make in California during the Gold Rush, Frederick Douglass's newspaper *North Star* was one such publication that inspired readers to relocate.

Which choice completes the text with the most logical and precise word or phrase?

- A. stimulated
- B. assigned
- C. opposed
- D. disregarded

Companies are providing consumers with more opportunities to purchase customized products than ever before. Whether buying customized sneakers, jewelry, or clothing, consumers can participate in the design of products to meet their specific needs and tastes. In turn, companies profit too: studies have shown that consumers are willing to pay more and wait longer for a customized product. Still, it can be difficult for companies to offer customization while keeping costs low, as the standard methods of mass production may not be able to accommodate making a unique product each time.

Which choice best describes the overall structure of the text?

- A. It discusses several recent innovations in product manufacturing and then suggests some potential applications of those innovations.
- B. It describes a company's recent success with new products and then explains multiple factors that may have contributed to that success.
- C. It introduces a trend in consumer products and then explains how the trend both benefits and poses a challenge to companies.
- D. It presents two contrasting product-marketing techniques and then provides examples of one of those techniques.

**Text 1**

Historians studying pre-Inca Peru have looked to ceramic vessels to understand daily life among the Moche people. These mold-made sculptures present plants, animals, and human faces in precise ways—vessels representing human faces are so detailed that scholars have interpreted facial markings to represent scars and other skin irregularities. Some historians have even used these objects to identify potential skin diseases that may have afflicted people at the time.

**Text 2**

Art historian and archaeologist Lisa Trever has argued that the interpretation of Moche “portrait” vessels as hyper-realistic portrayals of identifiable people may inadvertently disregard the creativity of the objects’ creators. Moche ceramic vessels, Trever argues, are artworks in which sculptors could free their imagination, using realistic objects and people around them as inspiration to explore more abstract concepts.

Based on the texts, what would Lisa Trever (Text 2) most likely say about the interpretation presented in the underlined portion of Text 1?

- A. Depictions of human faces are significantly more realistic than depictions of plants and other animals are.
- B. It is likely that some depictions of human faces with extensive markings are intended to portray the same historical individual.
- C. Some vessels may have been damaged during their excavation and thus provide little insight into Moche culture.
- D. Markings on depictions of human faces are not necessarily intended to portray particular details about the physical appearance of individuals.
