Q1**B****B. comparable to**

Choice B is the best answer because it most logically completes the text’s discussion of the fossilized bones of the hominin known as Little Foot. As used in this context, “comparable to” would mean similar to. The text indicates that the relationship between the fossilized clavicle and shoulder bones of Little Foot and the clavicle and shoulder bones of “frequent climbers,” such as chimpanzees and gorillas, suggests that Little Foot had adapted to moving around in trees. This context suggests that the relationship between the fossilized bones of Little Foot and the bones of chimpanzees and gorillas is one of similarity—the Little Foot fossils are likely comparable to the modern ape bones.

Choice A is incorrect because if the fossilized bones of Little Foot were “surpassed by,” or exceeded by or made inferior to, the bones of modern apes that are frequent climbers, it wouldn’t suggest, as the text says, that Little Foot was adapted to moving around in trees. If anything, learning that Little Foot’s clavicle and shoulder bones were surpassed by those of chimpanzees and gorillas would suggest that Little Foot was poorly adapted to climbing. Choice C is incorrect because if Little Foot’s fossilized clavicle and shoulder bones were “independent of,” or not influenced by or affiliated with, the bones of modern apes that climb often, it wouldn’t suggest, as the text says, that Little Foot was adapted to moving around in trees. Choice D is incorrect because the text indicates that Little Foot’s fossilized bones date to 3.6 million years ago, so they couldn’t have been “obtained from,” or acquired from, the bones of modern apes.

Q2

C

- C. The text describes a general situation, then illustrates that situation with specific examples.
-

Choice C is the best answer. The first three sentences describe the general situation: these early films have been lost, and we only know about them from small pieces of evidence. The rest of the text offers specific examples of the small pieces of evidence.

Choice A is incorrect. This isn't the overall structure. The fact that we only know about these lost early films from small pieces of evidence isn't presented as a "complex problem"—that's too extreme. And the examples presented are not "unsuccessful attempts" to solve it. If anything, the examples represent a success, because we discovered that these films existed in the first place. Choice B is incorrect. This isn't the overall structure. There's no "debate" presented in the text, so there's no "side" for the text to support. Choice D is incorrect. This isn't the overall structure. The text doesn't discuss any "differences" between the filmmakers.

Q3

D

- D. The author of Text 1 believes that the moon formed more slowly than the author of Text 2 believes.
-

Choice D is the best answer. Text 1 states that the moon was formed from the debris "over the course of thousands of years," while Text 2 states that the moon's formation happened "immediately after impact, taking just a few hours." This shows a clear difference in how the authors view the evidence for the speed of the moon's formation.

Choice A is incorrect. While Text 2 suggests that the moon formed over "just a few hours" and Text 1 says it took "thousands of years," neither one mentions when that formation occurred. Choice B is incorrect. While Theia isn't mentioned in Text 2, neither text describes or disputes evidence of Theia's existence. Choice C is incorrect. Neither text makes any claims about the similarity or difference between the moon's surface and Earth's surface.

Q4

C

C. interpret

Choice C is the best answer because it most logically completes the text’s discussion of John Ashbery’s poems. As used in this context, “interpret” would mean decipher the meaning of. The text indicates that Ashbery’s poems have many unusual features, that it’s difficult to tell what exactly the poems’ subject matter is, and that scholars strongly disagree about the poems. This context conveys the idea that it’s difficult to interpret Ashbery’s poems.

Choice A is incorrect because “delegate” means to assign someone as a representative of another person or to entrust something to someone else, neither of which would make sense in context. The text is focused only on the difficulty that readers have interpreting Ashbery’s poems due to their many unusual features; it doesn’t suggest anything about the poems being difficult to delegate. Choice B is incorrect because describing Ashbery’s poems as difficult to “compose,” or put together or produce, would make sense only if the text were about Ashbery’s experience of writing the poems. It could be true that it was difficult for Ashbery to compose his poems, but the text doesn’t address this; it instead discusses how readers interpret and engage with the poems. Choice D is incorrect because describing Ashbery’s poems as being difficult to “renounce,” or give up or refuse, wouldn’t make sense in context. The text focuses on the idea that features of Ashbery’s poems are odd or unclear and have caused heated scholarly debate. This context suggests that the poems are difficult to interpret, not that the poems are difficult to renounce.

Q5

A

A. To discuss von Ahn's invention of reCAPTCHA

Choice A is the best answer because it most accurately states the main purpose of the text. After providing a brief introduction to computer scientist Luis von Ahn, the text focuses on discussing how von Ahn's digitization work led to the invention of a digital security test known as reCAPTCHA.

Choice B is incorrect because the text doesn't address how digital scanners work. Choice C is incorrect. Although the text mentions von Ahn's book-digitizing project, that information is provided as a detail, not as the main purpose of the text. Choice D is incorrect because the text doesn't provide any indication of reCAPTCHA's popularity; instead, it describes reCAPTCHA's origin.

Q6

C

C. State a preference about where to eat.

Choice C is the best answer because it directly applies the research findings described in Text 2 to the situation underlined in Text 1. The underlined sentence in Text 1 describes a common scenario in which two friends are deciding on a lunch location. Text 1 goes on to explain that people often don't reveal their true preferences in such situations, instead claiming they're fine with any option so that they can appear more easygoing and likable. Text 2 presents research that advises against this approach, stating that people who don't express their preferences aren't viewed as more likable and that this behavior actually makes decisions more difficult for others. Since Text 2 specifically argues against the strategy of concealing preferences and indicates negative outcomes from doing so, the author of Text 2 would most likely recommend stating a preference about where to eat.

Choice A is incorrect because nothing in Text 2 suggests that canceling plans is a good solution. The author of Text 2 is addressing how to make joint decisions effectively (through stating your own preference), not advocating for avoiding such decisions entirely. Choice B is incorrect because asking where the friend typically likes to eat still avoids stating one's own preference. While this approach might seem considerate, it continues the pattern of not revealing true preferences that Text 2 identifies as problematic. Choice D is incorrect because changing the subject would avoid making any decision altogether, which contradicts the implied advice in Text 2. The author of Text 2 presents research suggesting that directly engaging with the decision by stating preferences helps others make decisions and makes you appear more likable.

Q7

B

B. melodic

Choice B is the best answer. Based on the text, we're looking for a word that means something similar to "pleasant musical quality." That's exactly what "melodic" means.

Choice A is incorrect. This isn't a logical word choice. Based on the text, we're looking for a word that means something similar to "pleasant musical quality." "Scholarly" would suggest something that is academic or well-researched, which doesn't match the meaning we're looking for. Choice C is incorrect. This isn't a logical word choice. Based on the text, we're looking for a word that means something similar to "pleasant musical quality." "Jarring" would suggest the opposite: something unpleasant or discordant. Choice D is incorrect. This isn't a logical word choice. Based on the text, we're looking for a word that means something similar to "pleasant musical quality." "Personal" would suggest something that is expressive or intimate, which doesn't match the meaning we're looking for.

Q8

B

- B. It mentions the elimination of the gray wolf from Yellowstone National Park and then explains why the wolf was eventually restored to the park.
-

Choice B is the best answer because it most accurately describes the overall structure of the text. The text begins by stating that the gray wolf was eradicated from Yellowstone National Park in 1926. It then explains the consequences of this elimination—namely that the elk population grew too large and overgrazing occurred, negatively affecting other animals in the area. The text then states that once scientists realized the importance of the gray wolf to the Yellowstone food chain, they undertook efforts leading to the wolves’ reintroduction to the park in 1996. Thus, the structure of the text can be accurately described as mentioning the elimination of the gray wolf from Yellowstone and then explaining why the wolf was later restored to the park.

Choice A is incorrect. While the text does summarize a problem associated with an event in the 1920s (the eradication of gray wolves from Yellowstone in 1926), the problems discussed arose after that event—namely, the subsequent elk overpopulation, resultant overgrazing, and then further impacts to other animals in Yellowstone. Furthermore, the text doesn’t present multiple potential solutions. Instead, it describes one solution that was actually implemented: the reintroduction of gray wolves in 1996. Choice C is incorrect because the text doesn’t make a claim about the health of the gray wolf population apart from pointing out that the wolves had been eradicated from, and then subsequently restored to, Yellowstone. Instead, the text focuses on outcomes associated with the gray wolf’s eradication and reintroduction. Choice D is incorrect. Though the text does mention that the ecosystem of Yellowstone rebounded after the gray wolf was reintroduced in 1996, the text never explains why the park allowed the wolves to be eradicated in 1926. It simply states that this eradication occurred without elaborating on the decision-making process behind it.

Q9

C

- C. Requiring people to vote does not necessarily lead to election outcomes that better represent the preferences of the country as a whole.
-

Choice C is the best answer. Text 1 claims that mandatory voting results in elections that "better reflect the preferences of the country." Singh and Roy disagree. They claim that more voters doesn't equal more quality votes—instead, they argue that forced voting may lead to less-informed votes that "may not reflect [voters'] actual preferences."

Choice A is incorrect. Neither text mentions the population size of countries that require voting, or how that might affect election outcomes. Choice B is incorrect. Neither text discusses the effects of mandatory voting on other forms of political engagement. Choice D is incorrect. Neither text discusses the ease or difficulty of the voting process in countries that require voting.

Q10

A

A. responsive

Choice A is the best answer because it most logically completes the text's discussion of oysters and ocean recordings. As used in this context, "responsive" means reacting positively. The text presents a finding and describes it as suggesting that healthy ocean sounds may encourage oyster larvae to establish a reef (a permanent home): groups of oyster larvae that heard recorded sounds of a healthy oyster reef were two times more likely to show signs of forming their own reef than groups that heard different ocean recordings were. This context conveys that the groups that heard healthy reef sounds had a more positive reaction than the other groups did—that is, they were the most responsive.

Choice B is incorrect because the text doesn't indicate that hearing sounds of a healthy oyster reef caused some groups of oyster larvae to become "inactive," or to stop engaging in work or activity. Instead, the text conveys that the groups that heard those sounds were observed engaging in activity: they were two times more likely to create a reef (a permanent home) than groups that heard different ocean sounds were. Choice C is incorrect because describing the groups of oyster larvae that heard sounds of a healthy oyster reef as most "liked," or regarded with pleasure, wouldn't make sense in context. The text focuses on the idea that a study found that healthy reef sounds may encourage groups of oyster larvae to form reefs (permanent homes), not on the idea that some of the groups in the study were liked more than others. Choice D is incorrect because the text doesn't indicate that hearing sounds of a healthy oyster reef caused some groups of oyster larvae to be "distressed," or to experience difficulty or begin to decline. Instead, the text indicates that the sounds increased the likelihood that groups of larvae would establish a reef (a permanent home), suggesting that the sounds had a positive effect on the larvae.

Notes

Accept equivalent forms (e.g. $0.25 \equiv 1/4$). For grid-in items, decimal and fraction answers are both valid.
