Q1

CRAFT AND STRUCTURE

Anthropologist Kristian J. Carlson and colleagues examined the fossilized clavicle and shoulder bones of a 3.6-million-year-old early hominin known as “Little Foot.” They found that these bones were _____ blank the clavicle and shoulder bones of modern apes that are frequent climbers, such as gorillas and chimpanzees, suggesting that Little Foot had adapted to life in the trees.

Which choice completes the text with the most logical and precise word or phrase?

- A. surpassed by
- B. comparable to
- C. independent of
- D. obtained from

Many films from the early 1900s have been lost. These losses include several films by the first wave of Black women filmmakers. We know about these lost movies only from small pieces of evidence. For example, an advertisement for Jennie Louise Touissant Welcome's documentary *Doing Their Bit* still exists. There's a reference in a magazine to Tressie Souders's film *A Woman's Error*. And Maria P. Williams's *The Flames of Wrath* is mentioned in a letter and a newspaper article, and one image from the movie was discovered in the 1990s.

Which choice best describes the overall structure of the text?

- A. The text identifies a complex problem, then presents examples of unsuccessful attempts to solve that problem.
- B. The text summarizes a debate among researchers, then gives reasons for supporting one side in that debate.
- C. The text describes a general situation, then illustrates that situation with specific examples.
- D. The text discusses several notable individuals, then explains commonly overlooked differences between those individuals.

Text 1

Most scientists agree that the moon was likely formed after a collision between Earth and a large planet named Theia. This collision likely created a huge debris field, made up of material from both Earth and Theia. Based on models of this event, scientists believe that the moon was formed from this debris over the course of thousands of years.

Text 2

Researchers from NASA's Ames Research Center used a computer to model how the moon could have formed. Although simulations of the moon's formation have been done in the past, the team from NASA ran simulations that were much more detailed. They found that the formation of the moon was likely not a slow process that took many years. Instead, it's probable that the moon's formation happened immediately after impact, taking just a few hours.

Which choice best describes a difference in how the author of Text 1 and the author of Text 2 view the evidence for the formation of the moon?

- A. The author of Text 1 argues that the formation of the moon occurred much earlier than the author of Text 2 argues.
- B. The author of Text 1 suggests there is more evidence confirming the existence of Theia than the author of Text 2 suggests.
- C. The author of Text 1 claims that the moon's surface is more similar to Earth's surface than the author of Text 2 claims.
- D. The author of Text 1 believes that the moon formed more slowly than the author of Text 2 believes.

Due to their often strange images, highly experimental syntax, and opaque subject matter, many of John Ashbery's poems can be quite difficult to _____ blank and thus are the object of heated debate among scholars.

Which choice completes the text with the most logical and precise word or phrase?

- A. delegate
- B. compose
- C. interpret
- D. renounce

In 2007, computer scientist Luis von Ahn was working on converting printed books into a digital format. He found that some words were distorted enough that digital scanners couldn't recognize them, but most humans could easily read them. Based on that finding, von Ahn invented a simple security test to keep automated "bots" out of websites. The first version of the reCAPTCHA test asked users to type one known word and one of the many words scanners couldn't recognize. Correct answers proved the users were humans and added data to the book-digitizing project.

Which choice best states the main purpose of the text?

- A. To discuss von Ahn's invention of reCAPTCHA
- B. To explain how digital scanners work
- C. To call attention to von Ahn's book-digitizing project
- D. To indicate how popular reCAPTCHA is

Text 1

Imagine you and your friend are trying to decide where to eat lunch. When people try to make joint decisions like this, they often don't reveal their true preferences. Instead, they say they would be happy with all options because they think this response will help them appear more easygoing and likable to the other person.

Text 2

Research shows that people who don't state their preferences when making a decision with others aren't more likable in the eyes of others. In fact, stating that you have no preference actually makes the decision more difficult for other people. It can also cause them to feel less happy with their ultimate decision and with you.

Based on the texts, what response would the author of Text 2 most likely suggest for someone in the situation described in the underlined sentence in Text 1?

- A. Cancel the plan to have lunch together.
- B. Ask where the friend typically likes to eat.
- C. State a preference about where to eat.
- D. Change the subject to talk about something else.

In recommending Bao Phi's collection *Sông I Sing*, a librarian noted that pieces by the spoken-word poet don't lose their _____ blank nature when printed: the language has the same pleasant musical quality on the page as it does when performed by Phi.

Which choice completes the text with the most logical and precise word or phrase?

- A. scholarly
- B. melodic
- C. jarring
- D. personal

Following the eradication of the gray wolf in Yellowstone National Park in 1926, the population of elk—a primary prey of the gray wolf—exceeded a healthy size for the park’s ecosystem. Elk overpopulation led to overgrazing of areas that a multitude of other animals relied on for food and shelter. As scientists began to see how essential the gray wolf was to the Yellowstone food chain, ecological restoration strategies were employed to reintroduce the gray wolf to the park in 1996. The rebound effect in the park’s natural ecosystem was noticed almost immediately.

Which choice best describes the overall structure of the text?

- A. It summarizes a problem that developed in Yellowstone National Park in the 1920s and then offers potential solutions to that problem.
- B. It mentions the elimination of the gray wolf from Yellowstone National Park and then explains why the wolf was eventually restored to the park.
- C. It presents a claim about the health of the Yellowstone National Park gray wolf population and then gives specific examples to support that claim.
- D. It explains why Yellowstone National Park allowed the eradication of the gray wolf and then discusses the consequences of reintroducing the wolf to the park.

Text 1

Public policy researcher Anthony Fowler studied the history of elections in Australia, a country that requires citizens to vote. Fowler argues that requiring citizens to vote leads to a significant increase in voters who would otherwise not have the time or motivation to vote. Thus, election results in countries that require citizens to vote better reflect the preferences of the country as a whole.

Text 2

Governments in democratic countries function better when more people vote. However, forcing people to vote may have negative consequences. Shane P. Singh and Jason Roy studied what happens when a country requires its citizens to vote. They found that when people feel forced to vote, they tend to spend less time looking for information about their choices when voting. As a result, votes from these voters may not reflect their actual preferences.

Based on the texts, how would Singh and Roy (Text 2) most likely respond to the research discussed in Text 1?

- A. Only countries of a certain population size should implement mandatory voting.
- B. People who are forced to vote are likely to become politically engaged in other ways, such as volunteering or running for office.
- C. Requiring people to vote does not necessarily lead to election outcomes that better represent the preferences of the country as a whole.
- D. Countries that require voting must also make the process of voting easier for their citizens.

When marine biologist Brittany Williams played different ocean recordings to groups of oyster larvae, groups that heard sounds of a healthy oyster reef were the most _____ blank. They were twice as likely as other groups to show signs of making a permanent home. This suggests that playing recordings of a healthy ocean reef may encourage oysters to create such a reef.

Which choice completes the text with the most logical and precise word or phrase?

- A. responsive
- B. inactive
- C. liked
- D. distressed
