**Q1****C**

- C. there was one guild for every 661 inhabitants in Rouen but one guild for every 4,511 inhabitants in Paris.

Choice C is the best answer. The claim we're trying to prove is that guilds were much more numerous relative to population in some cities than others. This choice describes the guilds per number of inhabitants in two cities (Rouen and Paris), showing significant differences between guilds relative to population in these cities.

Choice A is incorrect. This choice misreads the table. Bordeaux had 80,000 inhabitants, according to the table, while Lyon had 143,000, so it isn't correct to say that they had "nearly equal numbers of inhabitants." Lyon had almost twice as many inhabitants. Choice B is incorrect. This choice misreads the table. Although Lyon did have fewer inhabitants than Paris, it didn't have more guilds—Paris had 133 guilds versus Lyon's 72. Choice D is incorrect. This choice doesn't support the claim. To show that guilds were more numerous relative to population in some cities than others, we would need to compare at least two cities, and this choice only mentions one.

Q2

B

- B. Sea stars in the tank with only seawater climbed to the top of the tank, but sea stars in the other tank stopped climbing just below the layer of fresh water.
- 

Choice B is the best answer because it presents a finding that, if true, would support Garza and Robles's hypothesis that a layer of fresh water forms a barrier to ochre sea stars. The text explains that the sea stars tend to move to higher shore levels at night in search of prey, but after a heavy rain, the sea stars stay at lower shore levels. Garza and Robles hypothesize that rainfall results in a layer of fresh water that the sea stars don't cross. To determine whether fresh water forms a barrier to sea stars, Garza and Robles observed how sea stars behaved in a tank of only seawater and in a tank of seawater with a layer of fresh water on top. If the sea stars climbed to the top of the tank with only seawater but stopped climbing just below the layer of fresh water in the other tank, that would suggest that fresh water does indeed serve as a barrier to the sea stars, thereby supporting Garza and Robles's hypothesis.

Choice A is incorrect because finding that sea stars in the tank with only seawater moved around the bottom of the tank more than sea stars in the other tank did but that none of the stars in either tank climbed to the top would be irrelevant to Garza and Robles's hypothesis. Such a finding would reveal nothing about whether fresh water serves as a barrier to sea stars. Choice C is incorrect because finding that sea stars climbed to the top of both tanks would weaken, not support, Garza and Robles's hypothesis, since it would indicate that the layer of fresh water wasn't a barrier to the sea stars. Choice D is incorrect because finding that sea stars in the tank with only seawater mostly stayed near the bottom of the tank but sea stars in the other tank climbed into the layer of fresh water wouldn't support Garza and Robles's hypothesis. Instead, such a finding would suggest that the layer of fresh water wasn't a barrier to the sea stars, thereby weakening Garza and Robles's hypothesis.

---

Q3

C

C. "I felt it like a wall / Behind which I was sheltered from a wind."

Choice C is the best answer because it most effectively uses a quotation from "The Mountain" to illustrate the claim that the speaker feels protected by the mountain. In the quotation, the speaker recounts that the mountain felt like a wall that offers shelter from the wind. That the speaker felt sheltered by the mountain suggests that it offered the speaker a sense of being protected.

Choice A is incorrect because this quotation doesn't express the speaker's feeling of being protected by the mountain. Instead, it notes that the speaker has seen a dry ravine and a pasture. Choice B is incorrect because this quotation doesn't express the speaker's feeling of being protected by the mountain. Instead, it simply states that there is a mountain, which is meant to be viewed. Choice D is incorrect because this quotation doesn't express the speaker's feeling of being protected by the mountain. Instead, it indicates that the speaker has gone around the mountain.

Q4

A

A. the Philippines increased dramatically from 1908 to 1918.

Choice A is the best answer because it most effectively uses data from the graph to complete the example. According to the graph, fewer than 10,000 sewing machines were sold in the Philippines in both 1903 and 1908, but nearly 30,000 were sold in 1913 and around 45,000 were sold in 1918. This increase illustrates the statement in the text that demand for Singer sewing machines grew significantly in the early twentieth century in overseas countries other than Russia, Germany, and the United Kingdom.

Choice B is incorrect because consistent sales of Singer sewing machines in New Zealand from 1903 to 1918 do not indicate that demand for the product increased but rather that demand remained relatively the same. Choice C is incorrect because it does not accurately describe the data in the graph. Although sales in Australia did increase somewhat between 1903 and 1908, there was very little change between 1908 and 1913, and then sales declined between 1913 and 1918. The data for Australia, then, do not show a steady increase from 1903 to 1918.

Choice D is incorrect because declining sales of Singer sewing machines in Turkey from 1913 to 1918 do not point to an increase in demand for the product but rather to a decline in demand.

**Q5**

**B**

**B.** common dandelion.

---

Choice B is the best answer because it most effectively uses data from the table to complete the example of a neighboring species that has a negative effect value. The table lists neighboring species, target species, and effect values. The table shows that only one neighboring species, the common dandelion, has a negative effect value ( $-0.6254$ ).

Choice A is incorrect because the table shows that the neighboring species Himalayan balsam has a positive effect value,  $0.7905$ , so it isn't an example of a neighboring species with a negative effect value. Choice C is incorrect because the table shows that star chickweed is a target species, so it isn't an example of a neighboring species with a negative effect value. Choice D is incorrect because the table shows that the neighboring species Virginia spring beauty has a positive effect value,  $0.4853$ , so it isn't an example of a neighboring species with a negative effect value.

---

**Q6**

**C**

**C.** 40 meters tall.

---

Choice C is the best answer because it most effectively uses data from the table to complete the text about the el Castillo pyramid. The table presents information for the location, height, and age of four pyramids, and the task is to use the data from the table to complete the text by choosing the correct height for el Castillo, which the table shows is 40 meters.

Choice A is incorrect because, according to the table, el Castillo is 40 meters tall, not 33 meters, which is the height of the Great Pyramid in Mexico. Choice B is incorrect because, according to the table, el Castillo is 40 meters tall, not 47 meters, which is the height of the Pyramid of Sahure in Egypt. Choice D is incorrect because, according to the table, el Castillo is 40 meters tall, not 60 meters, which is the height of the Pyramid of Djoser in Egypt.

---

**Q7**

**C**

C. 304 square miles

---

Choice C is the best answer because it states the total area of Bahrain that is indicated in the table. The table presents the total area (in square miles) and population for Bahrain, Qatar, and Kuwait, and it indicates that the total area of Bahrain is 304 square miles.

Choice A is incorrect because the table indicates that 4,268,873 is the population of Kuwait, not the total area of Bahrain. Choice B is incorrect because the table indicates that 4,471 square miles is the total area of Qatar, not of Bahrain. Choice D is incorrect because the table indicates that 6,880 square miles is the total area of Kuwait, not of Bahrain.

---

**Q8**

**C**

C. “Kelly’s grandmother, who would repair clothing when he was a child, frequently added mismatched buttons to the clothes to draw attention away from any flaws in the garments.”

---

Choice C is the best answer. This quotation draws a direct connection between the use of buttons and Kelly’s stylish female relatives.

Choice A is incorrect. This choice mentions Kelly’s use of buttons, but it doesn’t connect that design choice to the influence of women in Kelly’s family. Choice B is incorrect. This choice discusses how other designers were inspired by Kelly, which doesn’t provide evidence that Kelly was inspired by his family. Choice D is incorrect. While this choice does refer to fashionable women in Kelly’s family, it doesn’t connect their influence to Kelly’s use of buttons.

---

Q9

D

- D. The highest number of medicine and health topic submissions during the period shown is approximately 285 in 2019.
- 

Choice D is the best answer because it effectively uses data from the graph to support the underlined claim that more medicine and health topics were submitted to a national science fair in 2019 than in any of the other years shown. This choice indicates that the approximately 285 medicine and health topics submitted in 2019 are more than the number of medicine and health submissions in any other year shown—a description that is supported by information in the graph, which shows that medicine and health topic submissions were below 250 in 2016, 2017, and 2018, but above 250 (approximately 285 submissions) in 2019.

Choice A is incorrect because it doesn't support the underlined claim or accurately reflect the information in the graph. This choice refers to 2016 and discusses cellular and molecular biology and animal science, whereas the underlined claim refers to 2019 and discusses medicine and health. Moreover, the claim that in 2016 there were equal numbers of submissions in the cellular and molecular biology category and in the animal science category is contradicted by the graph, which shows approximately 200 submissions and 50 submissions, respectively, for those categories in 2016. Choice B is incorrect because it doesn't accurately reflect the information in the graph. This choice claims that in 2019 there were more physics and space submissions than there were medicine and health submissions, but the graph shows that there were approximately 100 space and science submissions that year and approximately 285 medicine and health submissions. Choice C is incorrect because it doesn't accurately reflect the information in the graph or support the underlined claim about medicine and health research topics. This choice claims that there were approximately 95 submissions for the animal science category in 2016, but the graph shows that the number was closer to 50 in 2016.

---

## Q10

D

- D. "How [the sailor] haunted my dreams, I need scarcely tell you. On stormy nights, when the wind shook the four corners of the house and the surf roared along the cove and up the cliffs, I would see him in a thousand forms, and with a thousand diabolical expressions."
- 

Choice D is the best answer because it most effectively illustrates the claim that the narrator was frightened of the sailor. The quotation describes the sailor haunting the narrator's dreams, appearing in "a thousand forms" with "a thousand diabolical expressions." This vivid imagery conveys the intense psychological fear the narrator experienced when thinking about the sailor. Furthermore, the quotation evokes the narrator's terror and dread by describing a stormy night setting with wind shaking the house and a roaring surf.

Choice A is incorrect because this quotation does not provide any details to suggest that the narrator was afraid of the sailor. It simply describes the narrator's memory of the sailor arriving at the inn with his sea chest. Choice B is incorrect because this quotation does not effectively illustrate the claim that the narrator was frightened of the sailor. The quotation provides several details about the sailor, including that it was his custom to remain silent. However, the quotation does not relate these details to the narrator's experience of being frightened of the sailor. Choice C is incorrect because this quotation focuses on aspects of the sailor's appearance and dress. There is no connection made in the quotation between these physical details and the narrator's sense of being frightened of the sailor.

---
