Q1**C**

- C. *The New York Times* had a 20% revenue change, while the *Denver Post* had a –1%negative 1% revenue change.

Choice C is the best answer. The conclusion is that paywalls are more beneficial for large newspapers. This data supports that conclusion by comparing the revenue increase of a large newspaper to the revenue decrease of a small newspaper.

Choice A is incorrect. This choice doesn't support the conclusion. It doesn't include any small newspapers for comparison. Choice B is incorrect. This choice doesn't support the conclusion. It doesn't include any small newspapers for comparison. Choice D is incorrect. This choice doesn't support the conclusion. It doesn't include any large newspapers for comparison.

Q2

C

C. 0.26 million metric tons of copper in 1995.

Choice C is the best answer because it most effectively uses data from the table to complete the statement about copper mining. The table shows the amount of copper mined in each of four countries in 1995 and 2020. According to the text, a student who consults the table notes that the country that mined 0.55 million metric tons of copper in 2020 had mined a different amount in 1995. The table indicates that Kazakhstan is the country that mined 0.55 million metric tons of copper in 2020 and 0.26 million metric tons of copper in 1995.

Choice A is incorrect because it doesn't provide the amount of copper mined in 1995 by Kazakhstan, the country that mined 0.55 million metric tons of copper in 2020. According to the table, Canada mined 0.73 million metric tons of copper in 1995 and 0.59 million metric tons in 2020. It didn't mine 0.55 million metric tons in either year. Choice B is incorrect because it doesn't provide the amount of copper mined in 1995 by Kazakhstan, the country that mined 0.55 million metric tons of copper in 2020. According to the table, Indonesia mined 0.44 million metric tons of copper in 1995 and 0.51 million metric tons in 2020. It didn't mine 0.55 million metric tons in either year. Choice D is incorrect because it doesn't provide the amount of copper mined in 1995 by Kazakhstan, the country that mined 0.55 million metric tons of copper in 2020. According to the table, Chile mined 2.49 million metric tons of copper in 1995 and 5.73 million metric tons in 2020. It didn't mine 0.55 million metric tons in either year.

Q3

C

C. Ramah's average highest temperature was 83°, while Cameron's was 99°.

Choice C is the best answer because it effectively uses data from the table to complete the statement, providing an example of how the people of the Navajo Nation can experience different climate conditions depending on where they live. The table shows the average highest temperatures and average lowest temperatures in four locations in the Navajo Nation in July. According to the table, Ramah's average highest temperature for July was 83°, whereas Cameron's average highest temperature was much higher, at 99°. This difference illustrates the statement that the people of the Navajo Nation can experience different climate conditions depending on where they live.

Choice A is incorrect because it states that Cameron and Teec Nos Pos had the same average lowest temperature (65°) for July, which suggests a similarity in climate conditions in those locations rather than a difference. Choice B is incorrect because it misrepresents the data from the table, which shows that the average highest temperature in July for Tuba City was 83°, not 94°, and for Teec Nos Pos it was 94°, not 93°. Even if the cited data accurately reflected the data in the table, the similarity between the two values for average highest temperature would suggest that people in the two locations likely experience similar climate conditions, not different climate conditions. Choice D is incorrect because it states that Ramah and Tuba City had the same average lowest temperature (50°) for July, which suggests a similarity in climate conditions in those locations rather than a difference.

Q4

C

C. 32.4 square miles.

Choice C is the best answer because it most effectively uses data from the table to complete the comparison between Pueblo tribal nations. The student identifies that the total area of Taos Pueblo is 156.2 square miles and needs to complete the comparison with the total area of Nambé Pueblo. According to the table, Nambé Pueblo has a total area of 32.4 square miles.

Choice A is incorrect because according to the table, 47.3 square miles is the area of Pueblo de San Ildefonso, not of Nambé Pueblo. Choice B is incorrect because according to the table, 77.1 square miles is the area of Santa Clara Pueblo, not of Nambé Pueblo. Choice D is incorrect because according to the table, 595.7 square miles is the area of Pueblo of Acoma, not of Nambé Pueblo.

Q5

D

- D. More of the drawings had an example of a mammal than either an example of a bird or an example of an insect.
-

Choice D is the best answer because it accurately describes data from the graph that support the researchers' conclusion that children may be more aware of mammals than of other animals. The graph presents the percent of drawings by schoolchildren that contained an example of an animal from a certain group (mammals, birds, or insects). The graph shows that approximately 80% of the drawings contained an example of a mammal, while only approximately 69% contained an example of a bird and only about 55% contained an example of an insect. The fact that mammals were included in more drawings than either birds or insects were supports the idea that children may be particularly aware of mammals in their environments.

Choice A is incorrect because the graph shows that there were not "about as many" drawings with insects as there were drawings with birds (approximately 69% of the drawings included an example of a bird, while only about 55% included an example of an insect). Further, comparing only the numbers for birds and insects wouldn't indicate anything about the schoolchildren's awareness of mammals. Choice B is incorrect because the graph shows that insects, not birds, were the group that appeared in the fewest number of drawings (approximately 69% of the drawings included an example of a bird but only about 55% included an example of an insect). Further, stating that examples from one nonmammal group appeared in the fewest number of drawings would provide no evidence about the schoolchildren's awareness of mammals. Choice C is incorrect because the graph shows that more drawings had an example of a mammal than an example of an insect, not the other way around (approximately 80% of the drawings included an example of a mammal, while only about 55% included an example of an insect). Further, examples of a nonmammal group appearing in more drawings than examples of mammals did would actually weaken the claim that schoolchildren may be more aware of mammals than of other animals.

Q6**D****D. 2017.**

Choice D is the best answer because it most effectively uses data from the table to complete the statement about the year when both museums had the highest number of visits. The table shows the number of visits (in millions) from 2016 to 2019 to two museums: the National Museum of the American Indian and the National Museum of African American History and Culture. It indicates that the highest number of visits to the National Museum of the American Indian was 1.2 million in 2017 and that the highest number of visits to the National Museum of African American History and Culture was 2.4 million, also in 2017.

Choice A is incorrect because the table shows that in 2016, the National Museum of the American Indian had 1.1 million visits and that the National Museum of African American History and Culture had 0.73 million visits, both of which are lower than the number of visits these museums had in 2017. Choice B is incorrect because the table shows that in 2018, the National Museum of the American Indian had 1.1 million visits and that the National Museum of African American History and Culture had 1.9 million visits, both of which are lower than the number of visits these museums had in 2017. Choice C is incorrect because the table shows that in 2019, the National Museum of the American Indian had 0.96 million visits and that the National Museum of African American History and Culture had 2.0 million visits, both of which are lower than the number of visits these museums had in 2017.

Q7**C****C. sugar cookie cubes for meal B.**

Choice C is the best answer because it most effectively uses data from the table to complete the statement. The table shows that on day 1, the menu for NASA's Gemini missions included sugar cookie cubes for meal B.

Choice A is incorrect because according to the table, shrimp cocktail was served on day 4, not day 1; moreover, the item was served for meal C, not meal B, as this choice claims. Choice B is incorrect because according to the table, hot cocoa was served on day 3, not on day 1; moreover, the item was served for meal A, not for meal C, as this choice claims. Choice D is incorrect because according to the table, chicken and vegetables were served on day 2, not on day 1; moreover, the item was served for meal B, not for meal A, as this choice claims.

Q8

A

- A. strong enough to generate about 150 thousand more MWh of electricity from wind turbines.
-

Choice A is the best answer. The claim is that when winds are stronger than forecasted, wind turbines can generate more energy than predicted. The supporting graph shows the additional amount (above the predicted amount) that the turbines generated under those conditions, with the West generating about 150 thousand additional MWh.

Choice B is incorrect. This choice doesn't complete the example. The graph shows the additional amount of electricity that the wind turbines generated. The West bar is greater than 0, so the West generated more than the predicted amount. Choice C is incorrect. This choice doesn't complete the example. The graph shows the additional amount of electricity that the wind turbines generated. The West bar is greater than 0, so the West generated more than the predicted amount. Choice D is incorrect. This choice misreads the graph. The graph shows us that the West (the bar on the left) generated about 150 thousand additional MWh.

- B. a listening child “knows that Aunt Sue / Never got her stories out of any book at all, / But that they came / Right out of her own life.”
-

Choice B is the best answer because it most effectively illustrates the speaker of the poem’s claim that the stories Aunt Sue tells are based on Aunt Sue’s personal experiences. In the quotation, the speaker conveys the listening child’s point of view that Aunt Sue’s stories originate from her personal experiences and are not taken from books or other external sources. The listening child explicitly contrasts two possible sources for Aunt Sue’s stories: a book (whose potentially fictitious stories are implied to be written by someone else) or “her own life.” By having the child confidently assert that Aunt Sue “never got her stories out of any book at all,” the speaker indicates that Aunt Sue’s stories are instead informed by her lived experiences.

Choice A is incorrect because it describes an element or image that recurs within Aunt Sue’s stories rather than indicating that these stories have a real-life basis. The reference to dark shadows that “cross and recross” the stories functions as imagery on a literal, visual level and may also evoke figurative darkness, but this detail by itself doesn’t suggest that the stories are based on Aunt Sue’s personal experiences. Choice C is incorrect because it identifies the setting of Aunt Sue’s storytelling rather than describing the real-life basis of the stories themselves. The quotation states that Aunt Sue tells her stories on “summer nights on the front porch,” which establishes when and where the storytelling occurs; however, no information is provided about the origins of the stories that Aunt Sue tells within this setting. Choice D is incorrect because it describes the movement or circulation of characters in the stories as Aunt Sue speaks rather than establishing that these stories have a real-life basis. The quotation primarily evokes the sounds of Aunt Sue’s voice and the seemingly easy “flow” of this voice in her storytelling. Although the characters who “mingle...in the flow of old Aunt Sue’s voice” are to some extent created or animated by her voice, no information is provided about the characters themselves or their relationship to Aunt Sue’s actual experiences.

Q10

A

A. the cold-dry season for both females and males.

Choice A is the best answer. Females only traveled 9.28 km per day in the cold-dry season, versus 12.64 and 12.48 km per day in the monsoon and hot-dry seasons, respectively. Males only traveled 15.81 km per day per day in the cold-dry season, versus 18.93 and 18.87 km per day in the monsoon and hot-dry seasons, respectively. So, the cold-dry season was the season where both males and females had the least daily travel.

Choice B is incorrect. Although females traveled least in the cold-dry season, males didn't travel least in the hot-dry season. Instead, they traveled less per day in the cold-dry season as well. Choice C is incorrect. Females had less daily travel in the cold-dry season than in the hot-dry season (9.28 versus 12.48 km per day), and males had less daily travel in the cold-dry season than in the monsoon season (15.81 versus 18.93 km per day). Choice D is incorrect. In fact, both females and males traveled the most kilometers per day in the monsoon season.

Notes

Accept equivalent forms (e.g. $0.25 \equiv 1/4$). For grid-in items, decimal and fraction answers are both valid.
