Q1**D**

- D. “When [the banker] got home he lay on his bed, but his tears and emotion kept him for hours from sleeping.”
-

Choice D is the best answer because it most effectively uses a quotation from "The Bet" to illustrate the claim that the banker was very upset about something. The quotation indicates that the banker shed tears, which suggests that he was likely unhappy about something, and that his emotions were so strong that they kept him from sleeping for hours. These details suggest that the banker was very upset.

Choice A is incorrect because this quotation mainly describes the banker cautiously unlocking a door; it doesn't suggest that he was particularly upset about anything. Choice B is incorrect because this quotation doesn't mention whether the banker was experiencing any particularly strong negative feelings; instead, the quotation focuses on the quietness of the setting. Choice C is incorrect because this quotation states that the banker was feeling "delighted," not that he was upset.

Q2

A

A. help improve yields of harvested corn by being more likely to survive in severe winds.

Choice A is the best answer because it presents the conclusion that most logically completes the text's discussion about a trade-off in growing shorter varieties of corn. The text explains that plant specialists are working to develop shorter corn varieties in an effort to improve yields. The text points out that although greater height in corn plants can lead to more ears of corn per plant, it also makes the stalks more likely to be damaged by strong winds before there is a chance to harvest the corn. This presents a clear trade-off between potential yield (taller plants producing more ears per plant) and harvest reliability (shorter plants surviving until harvest time). Given this information, it is reasonable to infer that shorter corn varieties, while possibly producing fewer ears per plant, would be more likely to survive until harvest time. This survival advantage would result in improved yields of harvested corn because more plants would remain intact, thus offsetting the potential reduction in ears per shorter plant.

Choice B is incorrect. According to the text, greater height makes cornstalks vulnerable to snapping or being uprooted in strong winds, implying that taller plants—not shorter ones—have greater stability problems. The text provides no basis for inferring that shorter corn varieties would be more likely to be uprooted due to corn weight; in fact, the text suggests the opposite relationship between height and stability. Choice C is incorrect because the text doesn't provide information about the land requirements of either shorter corn varieties or shorter wheat and rice varieties, much less make any comparisons. The text mentions that plant breeders in the 1950s and '60s created shorter varieties of wheat and rice with improved yields and that researchers are now exploring shorter corn varieties, but it doesn't compare land-use requirements of these crops. Choice D is incorrect because the idea that shorter cornstalks would yield more ears of corn would contradict the relationship between height and corn production described in the text. The text explicitly states that greater height allows individual plants to produce more ears of corn, which suggests that shorter varieties would produce fewer ears per plant, not more. The text therefore provides no basis for concluding that shorter varieties would begin developing more ears than the taller varieties currently do.

Q3

B

B. He would have struggled to meet the increasing demand for his bags.

Choice B is the best answer because it presents the most likely consequence if New had not begun using sewing machines. The text states that New gained new customers and that sewing machines allowed him to make bags more efficiently, or in less time than he could when sewing by hand. It's reasonable to conclude that if New hadn't reduced the time it took to make each bag by starting to use sewing machines, it would have been hard for him to keep up with the increased demand.

Choice A is incorrect because the text indicates that New added unique, handcrafted details to his bags before he started using sewing machines and continued to do so after he started using them. Choice C is incorrect because the text doesn't suggest that individually designing each bag would have been a consequence of not using sewing machines, since New was already designing unique details for each bag before he started using sewing machines and continued to do so after he started using them. Choice D is incorrect because the text indicates that people were already interested in New's bags before he started using sewing machines. Rather than allowing New to generate more interest in his bags, sewing machines helped New keep up with the interest that had already grown.

Q4

D

D. 29%.

Choice D is the best answer because it effectively uses data from the table to complete the student's claim about the highest percentage of bus stops with shaded shelter in the areas represented. The table shows the highest average surface temperature of five areas and the percentage of bus stops with shaded shelter in each area, and 29% is the highest percentage listed.

Choice A is incorrect because the list of percentages of bus stops with shaded shelter does not include 50%; the highest percentage in the table is 29%. Choice B is incorrect because 15% is the lowest value in the listed percentages of bus stops with shaded shelter, not the highest value. Choice C is incorrect because the list of percentages of bus stops with shaded shelter does not include 90%; the highest percentage in the table is 29%.

Q5

B

- B. determine the colors of the bird based on the appearance of the melanosomes in the feather.
-

Choice B is the best answer because it most logically completes the text's discussion of a hypothesis by one group of scientists about how to determine the colors of a long-extinct animal. The text explains that the scientists found melanosomes in the fossilized feather of an extinct bird and that melanosomes are responsible for producing color inside cells. The text also explains that melanosomes have different shapes depending on the colors they produce. Given this information, it follows that the scientists hypothesized that they could determine the colors of the extinct bird by examining the shapes of the melanosomes in the feather.

Choice A is incorrect because the text never suggests that the scientists were seeking to show how melanosomes can be found in fossils belonging to animals from other extinct species. Rather, the text indicates that the scientists were seeking to identify an extinct bird's colors, and the text strongly suggests that the scientists hypothesized that they could achieve their goal by examining the shapes of the melanosomes in the bird's fossilized feather. Choice C is incorrect because the text never suggests that the scientists were seeking to explain why the melanosomes in the feather were so well preserved. Rather, the text indicates that the scientists were seeking to identify an extinct bird's colors, and the text strongly suggests that the scientists hypothesized that they could achieve their goal by examining the shapes of the melanosomes in the bird's fossilized feather. Choice D is incorrect because the text suggests only one method of identifying the colors of extinct animals: by examining the shapes of melanosomes found in fossils. The text doesn't discuss other methods for learning the colors of extinct animals and therefore provides no support for the idea that the scientists could identify the colors of extinct animals whose fossils lack melanosomes.

Q6

B

B. Fossil evidence can contribute to the understanding of the nervous system in ancient arthropods.

Choice B is the best answer because it most accurately states the main idea of the text. The text states that researchers have used fossils to learn about the nervous systems of ancient arthropods. It then provides a specific example of researchers studying fossils of *Mollisonia symmetrica* and finding evidence of a nerve cord and possibly a synganglion (a brain-like mass of nerves). The text concludes by noting that researchers hope to discover more features of prehistoric arthropods' nervous systems "as additional fossils are found." Thus, the main idea of the text is that fossil evidence can contribute to the understanding of the nervous system in ancient arthropods.

Choice A is incorrect because the text doesn't compare the brains of hawk moths and brine shrimp. These animals are merely mentioned as examples of arthropods in the opening sentence, and the text doesn't go on to discuss any similarities between their brains. Choice C is incorrect because the text discusses nervous systems, not spines, in ancient arthropods, and it doesn't specifically mention findings about ancient hawk moths or brine shrimp. Choice D is incorrect. While the text concludes by noting that researchers aim to discover additional characteristics of prehistoric arthropods' nervous systems as more fossils are uncovered, this statement doesn't suggest that researchers need to focus on finding more fossils. Rather, it simply indicates that researchers expect to learn more about this topic as additional fossils are discovered. Moreover, the statement is just a detail that supports the main idea; it's not the main idea itself.

Q7

B

B. 1995–1999.

Choice B is the best answer because it most effectively uses data from the table to complete the statement about video game availability. The text states that just a few games released in the past are available today and then indicates that there is a period of years from which only 14.22 percent of the games released are available. The table shows that 14.22 percent of games are still available from the years 1995–1999.

Choice A is incorrect because the years 2000–2004 are not represented in the table. Choice C is incorrect because the years 1970–1974 are not represented in the table. Choice D is incorrect because the years 1985–1989 correspond to a percentage of games still available of 15.38 percent, not 14.22 percent.

Q8

B

- B. many arts organizations recognize the importance of providing opportunities for young artists to learn from experienced mentors.
-

Choice B is the best answer because it presents the conclusion that most logically follows from the text's discussion of the relationship between the AACM's use of mentors to support young Black musicians and similar support that other organizations offer their young artists. According to the text, in service of AACM's goal to support new works by Black musicians, AACM mentors provide beneficial training and guidance to young artists. The text goes on to say that many other art organizations support new artists in similar ways, suggesting that these organizations recognize the importance of providing opportunities for young artists to learn from mentors who are established in their field.

Choice A is incorrect because the text gives no indication that technical training is more beneficial than creative guidance. The text states that AACM mentors offer both technical training and creative guidance to young artists and that other arts organizations offer similar kinds of support; however, nothing in the text suggests that young artists, or artists of any age, benefit more from technical training. Choice C is incorrect because the text is mainly concerned with the fact that established artists are mentoring young artists through AACM and other arts organizations. The text states that young musicians benefit from AACM mentors but does not address what mentors gain from the relationship, so there is no reason to conclude that most established artists could improve as artists by serving as mentors. Choice D is incorrect. Although the text indicates that mentors are beneficial to young musicians and that young people pursuing other kinds of art (including painting and writing) can also find mentors through arts organizations, the text gives no indication that mentors are more important for musicians than for other types of artists.

Q9

C

- C. Asawa's interest in art education prompted her to create art programs for students in San Francisco.
-

Choice C is the best answer because it most accurately states the main idea of the text. The text begins by establishing Ruth Asawa as an artist who worked in several art forms but emphasizes that she was interested in art for reasons other than her desire to create it. The text mentions two ways in which Asawa brought art to children through public schools: cofounding the Alvarado School Arts Workshop in 1968 and helping found a public arts high school in 1982. Thus, the main idea is that Asawa's interest in art education motivated her to establish arts programs for students in San Francisco.

Choice A is incorrect because the text doesn't mention Asawa inspiring other artists to share their work with students. While the text does note that the Alvarado School Arts Workshop brought works of art and artists into public schools, it doesn't state that Asawa motivated these artists. Choice B is incorrect because the text makes no comparison between local and national appreciation of Asawa's sculptures. While the text does mention that Asawa created unique tied-wire sculptures and was connected to San Francisco, it does not contrast her local and national critical receptions. Choice D is incorrect. Although the text emphasizes Asawa's educational initiatives, it doesn't state or imply that she abandoned her career as a sculptor to work as an art teacher. Instead, the text portrays her educational work as a complement to her career as a successful artist.

Q10

A

A. Eris and Makemake.

Choice A is the best answer because it most effectively uses data from the table to complete the statement about dwarf planets that have exactly one moon. The table lists several dwarf planets in one column and the number of moons that each of those dwarf planets has in another column. The text states that some dwarf planets have exactly one moon and indicates that there are two examples. Only two dwarf planets in the table have exactly one moon: Eris and Makemake.

Choice B is incorrect. According to the table, Eris has exactly one moon, but Haumea has two moons. Choice C is incorrect. According to the table, Haumea has two moons, and Pluto has five moons. Thus, they are not examples of dwarf planets with exactly one moon. Choice D is incorrect because while the table indicates that Makemake has exactly one moon, the table shows that Ceres has no moons at all.

Notes

Accept equivalent forms (e.g. $0.25 \equiv 1/4$). For grid-in items, decimal and fraction answers are both valid.
