Q1**B****B. POP biofuel.**

Choice B is the best answer because it most effectively uses data from the graph to complete the sentence about which fuel has the highest energy density. Of the four bars in the graph, the highest (indicating the greatest energy density in MJ/L) is for POP biofuel. According to the graph, the energy densities of the fuels shown are approximately 40 MJ/L for POP biofuel, 36 MJ/L for gasoline, 34 MJ/L for jet fuel, and 23 MJ/L for ethanol.

Choice A is incorrect. The task is to find the fuel in the graph with the highest bar (indicating the greatest energy density in MJ/L), and jet fuel has the third-highest bar in the graph, not the highest. According to the graph, the energy densities of the fuels shown are approximately 40 MJ/L for POP biofuel, 36 MJ/L for gasoline, 34 MJ/L for jet fuel, and 23 MJ/L for ethanol.

Choice C is incorrect. The task is to find the fuel in the graph with the highest bar (indicating the greatest energy density in MJ/L), and ethanol has the lowest bar in the graph, not the highest. According to the graph, the energy densities of the fuels shown are approximately 40 MJ/L for POP biofuel, 36 MJ/L for gasoline, 34 MJ/L for jet fuel, and 23 MJ/L for ethanol.

Choice D is incorrect. The task is to find the fuel in the graph with the highest bar (indicating the greatest energy density in MJ/L), and gasoline has the second-highest bar in the graph, not the highest. According to the graph, the energy densities of the fuels shown are approximately 40 MJ/L for POP biofuel, 36 MJ/L for gasoline, 34 MJ/L for jet fuel, and 23 MJ/L for ethanol.

C. shifts position in order to face outwards toward the audience.

Choice C is the best answer because it most logically completes the text's discussion of how a violist in a string quartet might behave to ensure their instrument can be heard clearly by the audience during a solo. According to the text, such quartets consist of two violins, a viola, and a cello, configured as follows: the cellist and one of the violinists both face the audience, while the other violinist and the violist face each other. In other words, the viola and its f-holes, or sound openings, are "angled away from the audience," just as the musician playing the instrument is. As the text implies, the f-holes are crucial for projecting sound, so this positioning reduces the volume of the viola as perceived by the audience and in turn presents a dilemma during a solo, in which the viola should be heard clearly above the other instruments in the quartet. Therefore, during a viola solo, the violist would most logically adjust their position and face the audience directly, thereby projecting the sound emerging from the instrument's f-holes toward listeners. This adjustment would maximize the viola's sound for the benefit of the audience for the duration of the solo.

Choice A is incorrect because the text's discussion is about how a violist in a string quartet behaves to ensure that their instrument can be heard clearly by the audience during a solo, given the orientation of this instrument in a typical string quartet configuration, and a soloist would want the viola to be more prominent relative to the other instruments in this context, not less prominent. Therefore, it wouldn't be sensible for the violist to instruct the other members of the quartet to play louder during the solo. Choice B is incorrect because the text's discussion is about how a violist behaves to ensure that their instrument can be heard clearly by the audience during a solo, given the orientation of this instrument in a typical string quartet configuration, and a violist would want the viola to be more prominent and therefore louder relative to all the other instruments. Therefore, it wouldn't be sensible for the violist to play at the same volume as the cellist during a solo. Choice D is incorrect. While a violist might very well look at the sheet music during a solo to ensure they are playing the piece correctly, the direction that a musician looks in doesn't determine how effectively the sound of their instrument is projected to the audience. If, as the text stipulates, a violist wants to ensure that their instrument can be heard clearly, given the orientation of the viola in the typical seating configuration of a string quartet, then the violist would likely change their physical orientation, facing toward the audience and therefore angling the viola's f-holes in that direction during the solo.

Q3

D

D. The cave's dimensions prevented the researchers from fully viewing the glyphs.

Choice D is the best answer. The text describes the very low ceiling of the cave, making it impossible to photograph the very wide glyphs all at once.

Choice A is incorrect. The text doesn't say this. It never suggests that the cave was remote or difficult to access, just that the cave itself was difficult to photograph well. Choice B is incorrect. The text doesn't say this. The glyphs were so wide that they couldn't be photographed completely. Choice C is incorrect. The text states the opposite of this. The researchers "used a technique called photogrammetry to assemble numerous photos of the walls into a 3D model."

Q4

A

A. \$31.78.

Choice A is the best answer because it most effectively uses data from the table to complete the text's discussion of how much a grower could have expected to receive on average for a box of lemons in July 2021. The table lists the average prices received by US citrus growers in dollars per box for grapefruits, oranges, and lemons in June 2020, June 2021, July 2020, and July 2021. According to the table, the average price of a box of lemons in July 2021 was \$31.78.

Choice B is incorrect because the text indicates that the employee of a citrus grower wishes to know the average price for a box of lemons in July 2021. According to the table, \$23.72 was the average price for a box of grapefruits in June 2021, not for a box of lemons in July 2021.

Choice C is incorrect because the text indicates that the employee of a citrus grower wishes to know the average price for a box of lemons in July 2021. According to the table, \$22.98 was the average price for a box of grapefruits in July 2021, not for a box of lemons in July 2021. Choice D is incorrect because the text indicates that the employee of a citrus grower wishes to know the average price for a box of lemons in July 2021. According to the table, \$28.94 was the average price for a box of lemons in June 2021, not in July 2021.

Q5

A

- A. the presence of some kinds of underwater plants like watermilfoil helps prevent methane from escaping shallow lakes and ponds.
-

Choice A is the best answer. The passage tells us that “tanks with duckweed (a floating plant) and algae released higher levels of methane than tanks with watermilfoil (an underwater plant) did.” This suggests that the presence of some kinds of underwater plants like watermilfoil may help prevent methane from escaping shallow lakes and ponds.

Choice B is incorrect. The passage doesn’t mention deeper bodies of water at all, so there’s no basis for this inference. Choice C is incorrect. The passage doesn’t compare the likelihood of shallow lakes and ponds containing algae, watermilfoil, or duckweed. Choice D is incorrect. The study didn’t include any tanks with a mix of plants, so there’s no basis for this inference.

Q6

C

- C. He hopes the photographs will help him recall what his aunt looked like.
-

Choice C is the best answer. The text states that the narrator couldn’t remember what his Radha Aunty looked like, so he went to look at the family photographs she was in.

Choice A is incorrect. There’s no mention of any story that the narrator is writing. Rather, we’re told that the narrator couldn’t remember what his aunt looked like, so he went to look at the family photographs she was in. Choice B is incorrect. The text doesn’t mention how the narrator’s father dressed. Rather, we’re told that the narrator couldn’t remember what his aunt looked like, so he went to look at the family photographs she was in. Choice D is incorrect. The text doesn’t mention any events shown in the photographs. Rather, we’re told that the narrator couldn’t remember what his aunt looked like, so he went to look at the family photographs she was in.

Q7

D

- D. “Although female pilots were typically expected to wear traditional but impractical attire that included dresses or skirts, photographs of Coleman show her wearing pants and leather jackets.”
-

Choice D is the best answer. This choice supports the claim of Coleman’s intentional defiance of social norms: female pilots were expected to wear skirts, but Coleman wore pants and leather jackets instead.

Choice A is incorrect. Coleman flew a well-known, common plane, which would not have defied social norms among pilots. Choice B is incorrect. Her complicated relationship with managers and staff would not have been a component of Coleman’s public persona. This choice also fails to mention any “social norms of the time.” Choice C is incorrect. While this quotation suggests that Coleman was careful and purposeful about her public image, it doesn’t directly mention anything about “social norms of the time.”

Q8

C

- C. they were too far from the other Nacional trees infected by the fungus to become infected themselves.
-

Choice C is the best answer because it most logically completes the text's discussion of the Nacional trees' survival in Piedra de Plata. The text states that the fungus that caused Nacional trees elsewhere to become diseased spreads from tree to nearby tree through the air. The text also mentions that the surviving Nacional trees were found in a hard-to-reach valley in Ecuador. Given this information, it's logical to conclude that these trees might have avoided infection because they were geographically isolated from infected Nacional trees, which prevented the airborne fungus from reaching them.

Choice A is incorrect because early twentieth-century scientists' lack of knowledge about the infection that affected many Nacionales doesn't explain how the trees in the Piedra de Plata coastal forest survived. The text is concerned with the physical factors that allowed certain trees to avoid infection, not with scientists' understanding of the disease. Choice B is incorrect. Although the text mentions that the fungus spreads through the air, it doesn't indicate when this ability was discovered. Moreover, even if the ability to move through the air was recently discovered, that wouldn't explain how the trees in Piedra de Plata avoided infection in the past. Choice D is incorrect because the value of the chocolate made from Nacional pods doesn't explain how the trees in the Piedra de Plata coastal forest avoided disease. The text focuses on the physical spread of the fungus that caused most Nacionales to become diseased, not on economic factors related to the trees' products.

Q9

B

B. They believe the scents could illuminate important aspects of ancient life.

Choice B is the best answer. The text states that archaeologists are interested in using scents to better understand "ancient rituals, trade, social hierarchies, and medicine," all of which are important aspects of ancient life.

Choice A is incorrect. The text doesn't say anything about investigating if people's sense of smell has declined in recent centuries. It says that scents fade over time—not that people have gotten worse at smelling scents. Choice C is incorrect. The text says that archaeologists are interested in using scents to better understand "ancient rituals, trade, social hierarchies, and medicine," but it doesn't say anything about ancient scents being enjoyable to people today. Choice D is incorrect. The text doesn't say anything about developing new medicines. Rather, it says that archaeologists are interested in using scents to better understand "ancient rituals, trade, social hierarchies, and medicine."

Q10

A

A. a larger area than either the Fiescher glacier or the Unteraar glacier.

Choice A is the best answer. The claim is that measurements such as total area can be used to compare glaciers. The graph shows us the area measurements for three glaciers. Of those, Gorner has the largest area.

Choice B is incorrect. This choice misreads the graph. The graph shows that Gorner has the largest area of the three. Choice C is incorrect. This choice misreads the graph. The graph shows that Gorner has the largest area of the three. Choice D is incorrect. This choice misreads the graph. The graph shows that Gorner has the largest area of the three.

Notes

Accept equivalent forms (e.g. $0.25 \equiv 1/4$). For grid-in items, decimal and fraction answers are both valid.
