Q1**B**

- B. the source of some of the raw materials used to make bronze was exploited only until the end of the Shang dynasty.

Choice B is the best answer. The passage tells us that Shang dynasty bronze artifacts contained "a rare form of lead," but that bronze artifacts after this time did not contain that lead. Although we don't know where that specific type of bronze came from, we can conclude that that source was not used after the end of the Shang dynasty—otherwise, post-Shang dynasty pieces would also contain that rare form of lead.

Choice A is incorrect. Despite these pieces containing "a rare form of lead," there is no direct claim in the passage that Shang dynasty bronze is itself more rare or valuable than bronze pieces from other periods. Therefore, there's no basis for this inference. Choice C is incorrect. Although the passage mentions that the nature of the bronze in Chinese artifacts changed after the Shang dynasty, bronze was still used to create artifacts after this time. The passage in fact explicitly states "bronze artifacts from China dated after the Shang dynasty..." indicating that bronze was still used in China after the Shang dynasty. Choice D is incorrect. There's no mention in the passage of methods used to analyze bronze artifacts, so there's no basis for this inference.

Q2

D

- D. As the director of the FTP, Flanagan succeeded in creating many jobs and introducing people to theater.
-

Choice D is the best answer because it most accurately states the main idea of the text. The text begins by stating that Flanagan was chosen in 1935 to lead the Federal Theatre Project (FTP), which was part of a program created by President Franklin D. Roosevelt. The text then explains that as the director of the FTP, Flanagan created jobs for more than 12,500 theater professionals and ensured that ticket prices stayed low so that many people could afford to experience theater for the first time. Thus, the main idea of the text is that as the FTP's director, Flanagan succeeded in creating many jobs and introducing people to theater.

Choice A is incorrect. The text does suggest that jobs provided by the FTP were intended mainly for theater professionals, but this isn't the text's main idea. The focus of the text is Hallie Flanagan's work as the director of the FTP, with the text's main point being that Flanagan succeeded in creating many jobs and introducing people to theater. Choice B is incorrect. The text does state that President Roosevelt created the WPA to provide jobs for unemployed people, but this is supporting information, not the text's main idea. The focus of the text is Hallie Flanagan's work as the director of the FTP, which was part of the WPA, and the text's main point is that Flanagan succeeded in creating many jobs and introducing people to theater. Choice C is incorrect. It's true that many people couldn't afford to buy theater tickets during the Great Depression, but this isn't the text's main idea. The focus of the text is Hallie Flanagan's work as the director of the FTP, with the text's main point being that Flanagan succeeded in creating many jobs and introducing people to theater.

Q3

A

- A. the number of cars produced increased but the number of companies producing cars decreased.
-

Choice A is the best answer because it most effectively uses data from the table to complete the statement about the US auto industry in the early twentieth century. The table shows the number of cars produced annually and number of companies producing cars in the United States between 1910 and 1925 in increments of five years. According to the table, the number of cars produced consistently increased from one increment to the next, going from 123,990 cars in 1910 to 3,185,881 cars in 1925. At the same time, the table shows that the number of companies producing cars consistently decreased, going from 320 companies in 1910 to only 80 companies in 1925. Thus, the table shows that the number of cars produced increased from 1910 to 1925, even as the number of companies producing cars decreased.

Choice B is incorrect. The table shows that the number of cars produced in the US increased, going from 123,990 in 1910 to 3,185,881 in 1925, instead of remaining unchanged, and the table also shows that the number of companies producing cars decreased from 320 to 80 instead of remaining unchanged. Choice C is incorrect because the table indicates that the number of cars produced consistently increased from 1910 to 1925, going from 123,990 cars to 3,185,881 cars, instead of decreasing; moreover, the table shows that the number of companies producing cars from 1910 to 1925 declined from 320 to 80 instead of remaining unchanged. Choice D is incorrect because the table indicates that the number of companies producing cars consistently decreased from 1910 to 1925, going from 320 companies to only 80 companies.

Q4

B

- B. in-person shopping may make products seem more valuable than they seem if only viewed online.
-

Choice B is the best answer. The text tells us that “people who got to touch the items were willing to pay much more money for them than people who weren’t allowed to touch” them. This suggests that being able to interact with a product in person may make it seem more valuable to a shopper.

Choice A is incorrect. The text doesn’t discuss how much people spend each month, so there’s not much basis for this claim. Furthermore, since being able to touch a product tends to make people “willing to pay much more money” for it, we might predict that an online shopper would be willing to spend less on the same purchases as an in-person shopper. Choice C is incorrect. The text doesn’t discuss what retailers “should charge,” so there’s not much basis for this claim. Furthermore, the study in the text suggests that in-person stores may actually be able to charge more for a given product, since shoppers can touch it. Choice D is incorrect. The text doesn’t discuss products that are only available online, so there’s not much basis for this claim. Furthermore, products only available online would still have the problem of shoppers not being able to touch them, and the study suggests that this lowers the prices shoppers are willing to pay.

Q5

D

D. Elinor is remarkably mature for her age.

Choice D is the best answer because it provides a detail about Elinor that is established in the text. The text indicates that although Elinor is “only nineteen,” she gives good advice and exhibits such a high level of understanding and judgment that she serves as “the counsellor of her mother.” Thus, Elinor is mature beyond her years.

Choice A is incorrect because it isn’t supported by the text: although the text says that Elinor advises her mother and often counteracts her mother’s impulses, there’s no mention of Elinor arguing with her mother or failing to change her mother’s mind. Choice B is incorrect because it isn’t supported by the text: although the text mentions that Elinor has strong feelings, it doesn’t indicate that she’s excessively sensitive when it comes to family issues. Choice C is incorrect because it isn’t supported by the text: there’s no mention of what Elinor thinks about her mother and no suggestion that she thinks her mother is a bad role model. Because she’s described as having “an excellent heart,” Elinor likely doesn’t think ill of her mother.

Q6

C

C. Yellowstone National Park.

Choice C is the best answer because it most effectively uses data from the graph to complete the statement about the US national park with the highest number of recreation visits during a three-month period. The line graph shows the number of recreation visits to four US national parks for the months of June, July, and August 2021. According to the graph, the number of recreation visits to Yellowstone National Park in June was approximately 940,000; in July, the number of visits was approximately 1,080,000; and in August, the number of visits was approximately 920,000. In all three months, the number of visits to Yellowstone was higher than the number of visits to any other park in each month.

Choice A is incorrect. According to the graph, the number of recreation visits to Zion National Park was approximately 680,000 in June, about 580,000 in July, and about 470,000 in August, each of which is lower than the number of visits to Yellowstone in the same months. Choice B is incorrect. According to the graph, the number of recreation visits to Rocky Mountain National Park was approximately 670,000 in June, about 900,000 in July, and about 750,000 in August, each of which is lower than the number of visits to Yellowstone in the same months. Choice D is incorrect. According to the graph, the number of recreation visits to Grand Canyon National Park was approximately 540,000 in June, about 560,000 in July, and about 430,000 in August, each of which is lower than the total visits to Yellowstone in the same months.

Q7

B

- B. the gene variant that results in black fur may be linked to immunity to the distemper virus.
-

Choice B is the best answer. The text tells us that the black-furred wolves are more common in areas with regular outbreaks of distemper virus and are more likely to be immune to distemper than the gray-furred wolves. This suggests that the gene variant that results in black fur may be linked to immunity to the distemper virus.

Choice A is incorrect. The text never compares North American gray wolves to other wolf species—in fact, it never discusses other wolf species at all, so there's no basis for this inference. Choice C is incorrect. The life span of gray wolves is never mentioned in this text, so we have no basis for this inference. Choice D is incorrect. This is too extreme. The text says that "black-furred wolves are more likely to be immune to distemper than the gray-furred wolves," but that alone doesn't mean that black-furred wolves will replace gray-furred wolves across North America.

Q8

B

B. A previously unseen behavior of gray seals

Choice B is the best answer because it most accurately states the main topic of the text. The text begins by noting that few animals are known to spit, and then it focuses on Clare Jacobs's January 2022 observation of a gray seal spitting water at a white-tailed eagle. The text explicitly notes that this behavior had never before been observed in seals, highlighting that this was a previously unseen behavior. The text concludes with biologist Sean Twiss's hypotheses about why the seal might have been spitting. Thus, the main topic is the observation of a previously unseen behavior (spitting) of gray seals.

Choice A is incorrect because while the text does mention bird-watcher Clare Jacobs making an observation in southern England, bird-watching itself is not the main topic. The reference to bird-watching is incidental to the central focus of the novel behavior of a gray seal spitting water at an eagle. Choice C is incorrect because the text only mentions a white-tailed eagle as the target of a seal's spitting behavior; it doesn't provide any information about how these eagles typically behave when defending territory or interacting with other predators. Choice D is incorrect because the text doesn't discuss differences between gray seals and white-tailed eagles. While both animals are mentioned, the text is focused on the seal's unusual spitting behavior rather than comparing the two animals in any way.

Q9

A

A. 170 electoral college votes.

Choice A is the best answer because it most effectively uses data from the table to complete the statement about the 15th US presidential election. The table shows the total number of electoral college votes and the total number of popular votes received by each of three candidates. The table shows that Polk received 170 electoral college votes.

Choice B is incorrect because the table shows that Polk received 170 electoral college votes, not 103. According to the table, none of the candidates received a total of 103 votes of either type (electoral college or popular). Choice C is incorrect because the table shows that Polk received 170 electoral college votes, not 62. According to the table, none of the candidates received a total of 62 votes of either type (electoral college or popular). Choice D is incorrect because the table shows that Polk received 170 electoral college votes, not 44. According to the table, none of the candidates received a total of 44 votes of either type (electoral college or popular).

Q10

C

C. producing adaptations will become easier and less expensive.

Choice C is the best answer. The text tells us that because of the copyright, adapting Sherlock Holmes stories used to be expensive and difficult. This suggests that after the copyright ends, it will be less expensive and less difficult to adapt these stories.

Choice A is incorrect. This inference isn't supported. The text never suggests that the copyright ending will make Sherlock Holmes stories harder to find. Instead, it suggests that adaptations of these stories will be easier and less expensive to make. Choice B is incorrect. This inference isn't supported. The text never discusses people's interest in detective stories, so there is no basis to make this inference. Choice D is incorrect. This inference isn't supported. The text never suggests that copyright fees from the past are returned after a copyright ends, so there is no basis to make this inference.

Notes

Accept equivalent forms (e.g. $0.25 \equiv 1/4$). For grid-in items, decimal and fraction answers are both valid.
