Q1**B****B. Dictate**

Choice B is the best answer because as used in the text "determine" most nearly means "dictate." The text describes the relationship between the main character and those who exhibit, praise, and purchase his artwork. The text states that the main character is often asked to change his art or himself based on outside influences, and he usually acquiesces. Because the main character admits that those who support his work often shape it based on their demands, it follows that those outside influences dictate, or guide or dominate, the direction his work takes.

Choice A is incorrect because the text doesn't suggest that outside influences "conclude," or end, the main character's work. The text states that many supporters of the main character's art "demand its proliferation," not its conclusion. Choice C is incorrect because the text doesn't suggest that outside influences are "evaluating," or judging the main character's work.

According to the text, the main character's art has already achieved great commercial success, with many people exhibiting, purchasing, and praising his work. Thus, outsiders have already supported the main character's work and are not questioning or evaluating its success or worth. They are instead influencing its initial direction. Choice D is incorrect because the text doesn't suggest that outside influences "select," or choose the main character's work. According to the text, the main character's art has already achieved great commercial success, with many people exhibiting, purchasing, and praising his work. Thus, outsiders have already supported the main character's work and are not selecting it. They are instead influencing its initial direction.

Q2

D

D. Providing resistance to

Choice D is the best answer because as used in the text, "disputing" most nearly means providing resistance to. The narrator is in a taxi as it drives down a street lined with so many food vendors and shoppers that the narrator describes them as "the multitude of Paris," meaning an immense group of people. The street is essentially a large open-air market, and there are so many people pushing small wagons of goods and carrying shopping baskets that "every inch" of the taxi's progress is impeded. In other words, the people are providing resistance to the taxi's attempt to drive down the street.

Choice A is incorrect. Although in some contexts, "disputing" can mean arguing, the narrator doesn't portray the shoppers and vendors as arguing with the driver of the taxi or, indeed, arguing at all. Choice B is incorrect. Although in some contexts, "disputing" can mean expressing disapproval, the narrator doesn't suggest that the shoppers and vendors necessarily disapprove of the taxi's attempt to drive down the street. Instead, their combined presence along the street has the effect of impeding the taxi's progress. Choice C is incorrect because, as the narrator explains, both the multitude of people and the taxi are using a public space (a street) at the same time. The narrator doesn't go so far as to suggest that the people feel that they, and not the taxi, possess exclusive access to the street.

Q3

D

D. exploited

Choice D is the best answer because it most logically completes the text's discussion of using magnetism to detect stress in buried metal pipes. In this context, "exploited" means made productive use of. The text indicates that the magnetic fields of some metals change under stress and that Saleem and colleagues showed that it is possible to measure those changes from a distance, thereby demonstrating that the integrity of underground metal pipes can be evaluated without having to unearth them. This context thus indicates that Saleem and colleagues made productive use of, or exploited, this tendency of the metals' magnetic fields.

Choice A is incorrect because in this context, "hypothesized" would mean made a tentative assumption to be evaluated in a study or experiment. Although Saleem and colleagues may have had one or more hypotheses for these experiments, the text presents the information about the tendency of some metals' magnetic fields to change under stress as a known fact that the researchers made productive use of, not as a hypothesis to be evaluated. The text after the colon indicates that the researchers were not evaluating whether such changes occur but whether those changes can be measured at a distance. Choice B is incorrect because in this context, "discounted" would mean downplayed or ignored, but the text does not suggest that Saleem and colleagues minimized or ignored the tendency of the magnetic fields of some metals to change under stress. Rather, the text indicates that this tendency is the basis for Saleem and colleagues' method of assessing the pipes' integrity. Choice C is incorrect because nothing in the text indicates that Saleem and colleagues "redefined," or reevaluated or reformulated, the tendency of some metals' magnetic fields to change under stress. Instead, the text indicates that the researchers made use of that tendency to demonstrate that it is possible to evaluate the integrity of underground pipes without unearthing them.

Q4

B

B. paucity of

Choice B is the best answer because it most logically and precisely completes the text's discussion of studies of altitude's effect on blood chemistry. In this context, "paucity of" means lack of. In describing the inspiration behind Al-Sweedan and Alhaj's research, the text uses the word "though" to suggest a contrasting relationship between two types of studies: those examining the effect on blood chemistry of living at a high altitude and those examining the effect on blood chemistry of living in locations below sea level. This contrasting relationship and the text's use of the word "many" provide context suggesting that there are few, if any, examples of the second type of study, whereas there are numerous examples of the first type.

Choice A is incorrect because it wouldn't make sense in context for there to be a "quarrel about," or open disagreement about, studies of the effect on blood chemistry of living in locations below sea level. The text's use of the words "though" and "many" suggests a contrasting relationship in terms of amount between two types of studies: those examining the effect on blood chemistry of living at a high altitude and those examining the effect on blood chemistry of living in locations below sea level. There's nothing in the text to suggest that the contrast between the two types of studies involves the extent to which researchers broadly agree or disagree about the contents of either type. Choice C is incorrect because it wouldn't make sense in context for there to be a "profusion of," or great abundance of, studies of the effect on blood chemistry of living in locations below sea level. The text's use of the words "though" and "many" suggests a contrasting relationship in terms of amount between two types of studies: those examining the effect on blood chemistry of living at a high altitude and those examining the effect on blood chemistry of living in locations below sea level. Rather than logically completing this contrast, "profusion of" would indicate that the two types of studies are similar in terms of amount, with many examples existing of both types. Choice D is incorrect because it wouldn't make sense in context for there to be a "verisimilitude in," or appearance of truth in, studies of the effect on blood chemistry of living in locations below sea level. The text's use of the words "though" and "many" suggests a contrasting relationship in terms of amount between two types of studies: those examining the effect on blood chemistry of living at a high altitude and those examining the effect on blood chemistry of living in locations below sea level. There's nothing in the text to suggest that the contrast between the two types of studies involves the extent to which either type of study presents an appearance of truth.

Q5

A

A. surmised

Choice A is the best answer because it most logically completes the text’s discussion of late nineteenth- and early twentieth-century household food purchases. In this context, “surmised” means formed an idea or assumption with little evidence. The text explains that certain economic historians “assumed” that large and small households spent different amounts on food per person, but that another economist found this supposition to be false based on evidence from available data. This context suggests that the economic historians made an incorrect assumption without enough consideration of evidence.

Choice B is incorrect. In this context, “contrived” would mean brought about or created through trickery. Nothing in the text suggests that the economic historians were deliberately trying to trick people with a claim about food purchasing behaviors in late nineteenth- and early twentieth-century households; the text simply suggests that they made an assumption about those behaviors that another historian believes isn’t supported by the available data. Choice C is incorrect because the text indicates that it’s Logan and not the economic historians who “questioned,” or doubted, the assumption that large and small households in the late nineteenth and early twentieth centuries spent different amounts on food per person; the economic historians are the ones who made that assumption to begin with. Choice D is incorrect because nothing in the text suggests that some economic historians “regretted,” or felt sad or remorseful about, the food purchasing behaviors of late nineteenth- and early twentieth-century households. The text focuses on the idea that the economic historians made an assumption about those behaviors that may not be supported by available data, not on the historians’ emotional response to what households did in the past.

Q6

C

C. supposition

Choice C is the best answer because it most logically completes the text's discussion of testing hypotheses regarding usage by means of text corpora. In this context, "supposition" refers to an assumption or hypothesis that is not yet proven. The text explains that text corpora can be used for "empirical testing of hypotheses regarding the frequency of typical word usage" and then provides a specific example of using corpus analysis to support a claim about the word "get." The word "supposition" precisely conveys this idea of an assumption or hypothesis about word frequency that can then be tested against empirical data.

Choice A is incorrect because it wouldn't make sense to say that someone has a "recognition" that the word "get" has a high incidence in English. Recognition implies acknowledging something already established as true or valid, but the text indicates that corpus analysis is needed to support the claim about "get," suggesting its high frequency wasn't already established or previously known. Choice B is incorrect because it wouldn't make sense to say that someone has a "scheme" that the word "get" has a high incidence in English. A scheme is a plan or systematic arrangement, but the context indicates what's needed is a preliminary hypothesis that can be tested with corpus data, not a plan related to word frequency. Choice D is incorrect because it wouldn't make sense to say that someone has a "synopsis" that the word "get" has a high incidence in English. A synopsis is a summary or outline, but the text is discussing an initial hypothesis about word frequency that requires testing, not a condensed statement of existing information.

Q7

C

C. unimportant

Choice C is the best answer because it most logically completes the sentence about the influences on Banisadr's work. In context, "It is by no means" followed by "unimportant" conveys how it is relevant to recognize Bosch's influence on Banisadr. The text points out that the artist himself cites Bosch as an inspiration, and then goes on to claim that *The Epic of Gilgamesh* has had a more significant influence than Bosch.

Choice A is incorrect because "substantial," which means weighty or meaningful, incorrectly suggests that it wouldn't be meaningful to acknowledge Bosch's influence on Banisadr. The phrase "indeed, Banisadr himself cites Bosch as an inspiration" doesn't support this suggestion. Choice B is incorrect because "satisfying," which means pleasing, incorrectly suggests that it wouldn't be pleasing to acknowledge Bosch's influence on Banisadr. The phrase "indeed, Banisadr himself cites Bosch as an inspiration" doesn't support this suggestion. Choice D is incorrect because "appropriate," which means suitable, incorrectly suggests that it wouldn't be proper to acknowledge Bosch's influence on Banisadr. The phrase "indeed, Banisadr himself cites Bosch as an inspiration" doesn't support this suggestion.

Q8

C

C. Tolerate

Choice C is the best answer because as used in the text, “endure” most nearly means tolerate. In the text, Cecily and Algernon discuss parting, or saying goodbye. Cecily remarks on the deep pain of saying goodbye to people whom one has only known briefly and then comments on the equanimity, or calm steadiness, one experiences when separated from old friends. The text sets up an ironic contrast: one can easily tolerate, or put up with, the absence of close friends, but even a very short separation from a new acquaintance is unbearable.

Choice A is incorrect. Nothing in the text suggests that Cecily associates regret, or a feeling of sorrow, with the absence of old friends. Rather, the text sets up an ironic contrast between the feeling of calm steadiness one feels when separated from old friends and the unbearable pain of being separated from new acquaintances. Choice B is incorrect. Although in some contexts “endure” can mean persist, or proceed stubbornly, it doesn’t have that meaning in this context because what is being endured is the absence of old friends. Whereas one can persist *despite* the absence of someone else, one can’t persist the absence itself. Choice D is incorrect because the text doesn’t convey that Cecily encourages, or urges, old friends to be absent. Although it may be that Cecily prefers new acquaintances to friends she has known for a long time, the text focuses on her feelings as a result of others’ absences, not on her treatment of others.

Q9

B

B. innocuous

Choice B is the best answer because it most logically completes the text’s discussion of Ward and colleagues’ findings. As used in this context, “innocuous” means mild or unarmful. The text describes the vibration and warming that Ward and colleagues used to alleviate itching as “harmless applications” and goes on to contrast these applications with another stimulus that actually offers more relief even though it seems to be stronger and “less benign.” This context conveys the idea that vibration and warming were innocuous stimuli.

Choice A is incorrect because the text focuses on a distinction between harmless stimuli and those that seem to be less benign. Nothing in the text suggests that any of the treatments are “deceptive,” or misleading; indeed, even the less effective ones are described as offering some relief. Choice C is incorrect because the text focuses on the amount of relief from itching offered by harmless stimuli and those that seem to be less benign. The text doesn’t suggest that any of these stimuli are “novel,” or original and new; heat, vibration, and electricity aren’t new inventions. Choice D is incorrect because it wouldn’t make sense to describe an application of vibration or warming as “impractical,” or not suitable for use. The text indicates that these harmless applications are useful in that they offer at least some temporary relief.

Q10

D

D. an arduous

Choice D is the best answer because it most logically completes the text's discussion of the creation of *The Adventures of Prince Achmed*. In this context, "arduous" means that the process is marked by great labor or effort. According to the text, the creation of the 1926 animated film *The Adventures of Prince Achmed* took three years and was a painstaking process. Since the process was so long and required great efforts by Lotte Reiniger and her team, the creation of the film was therefore an arduous process.

Choice A is incorrect because the text doesn't indicate that the creation of Reiniger's film was "a haphazard," or disorganized, process. In fact, the text suggests that the creation process was quite meticulous and the team worked hard together to produce the envisioned effects. Choice B is incorrect. While the text does suggest that the creation of Reiniger's film was a long and difficult process, it doesn't suggest that the process was "a contentious" one, or one causing controversy or argument. The text suggests that the team worked together to produce the envisioned effects. Choice C is incorrect because rather than describing the process of creating the film as "ineffectual," or not having the effect it was intended to have, the text describes the process as ultimately successful despite the difficulty it involved.

Notes

Accept equivalent forms (e.g. $0.25 \equiv 1/4$). For grid-in items, decimal and fraction answers are both valid.
