Q1**D**

- D. The broths in the 2007 experiment most likely did not have a substantial amount of the dipeptides that played a key part in the 2022 experiment.

Choice D is the best answer. Ishii and O'Mahony were trying to isolate the pure umami flavor, while Jünger was trying to recreate soy sauce, which has a mix of flavors that includes umami. Accordingly, the broths from Text 1 are not described as having any soy sauce in them—just “shiitake mushrooms and kombu seaweed.” So they probably don't have as much of the dipeptides described in Text 2, which were found to be a key part of soy sauce's umami-ness and its saltiness.

Choice A is incorrect. Neither text supports this. Neither text gets into the diets of people in the United States, nor the diets of people in Japan. Choice B is incorrect. Neither text supports this. Text 2 does talk about the molecular weights of chemical compounds, but there isn't enough information provided about molecular weights in Text 1 to make an inference about what the scientists in Text 1 would say. Choice C is incorrect. Neither text supports this. Text 1 briefly mentions that soy sauce is “made from fermented soybeans,” but it never claims that fermentation is responsible for its flavor in any way. And Text 2 never mentions fermentation at all.

Q2

D

D. It helps explain Cruse's position with respect to the community of civil rights thinkers.

Choice D is the best answer. The text as a whole claims that Cruse disagreed with virtually all other Civil Rights scholars and activists. The underlined sentence describes one way that Cruse both did and didn't fit in with those thinkers: he criticized Black nationalists, even though he identified as one.

Choice A is incorrect. The underlined sentence doesn't do this. It describes Cruse's criticisms—it never mentions what Cruse did want the movement to do instead. Choice B is incorrect. This conflicts with the text, which argues that Cruse did disagree with almost all other scholars of the Civil Rights Movement. Choice C is incorrect. This is a step too far. The text never says that Cruse's work caused controversy within the Black nationalist movement.

Q3

B

B. superseded

Choice B is the best answer because it most logically completes the text's discussion of the fork fern's enormous genome. In this context, "superseded" means surpassed or exceeded by something else. The text establishes that this plant has "the largest known" genome among eukaryotes and mentions "the high biological costs of extremely large genomes," suggesting there are natural constraints that make it biologically disadvantageous to maintain such massive genetic material. This context supports the idea that it's unlikely another organism will evolve an even larger genome that would replace this plant's record—that is, its status as having the largest genome is unlikely to be superseded.

Choice A is incorrect because in this context, "protracted" would mean drawn out over time or space, and the text focuses on the record size of the New Caledonian fork fern's genome and the fact that extremely large genomes carry "high biological costs." This information suggests that the biological upper limit for genome size may have been reached and that the New Caledonian fork fern's genome is therefore unlikely to be surpassed, or superseded, not that it's unlikely to be protracted. Choice C is incorrect because in this context, "curtailed" would mean cut short or reduced, and the text focuses on the record size of the New Caledonian fork fern's genome and the fact that extremely large genomes carry "high biological costs." This information suggests that the biological upper limit for genome size may have been reached and that the New Caledonian fork fern's genome is therefore unlikely to be surpassed, or superseded, not that it's unlikely to be curtailed. Choice D is incorrect because in this context, "obviated" would mean made unnecessary or redundant, and the text focuses on the record size of the New Caledonian fork fern's genome and the fact that extremely large genomes carry "high biological costs." This information suggests that the biological upper limit for genome size may have been reached and that the New Caledonian fork fern's genome is therefore unlikely to be surpassed, or superseded, not that it's unlikely to be obviated.

Q4

B

- B. Text 1 presents findings by Wang and colleagues and gives another research team's attempt to explain those findings, whereas Text 2 provides additional detail that calls that explanation into question.
-

Choice B is the best answer. Text 1 introduces Wang and colleagues' study and its surprising results, and then mentions Miller and Simpson's hypothesis as a possible way to explain them. Text 2, however, challenges Miller and Simpson's hypothesis by pointing out the difficulties of preserving mammoth carcasses on the surface for thousands of years: "scavengers and weathering" are the additional details that complicate the Miller/Simpson hypothesis.

Choice A is incorrect. Neither text compares two different approaches for studying mammoth extinction. Text 1 describes one study and one hypothesis pertaining to it. Text 2 critiques that hypothesis. Choice C is incorrect. Text 1 does not describe a critique of Wang and colleagues' methodology, but rather an interpretation of their results by Miller and Simpson. Text 2 does not offer additional details showing that methodology to be sound, but rather casts doubt on the Miller/Simpson explanation. Choice D is incorrect. Both components mentioned here (the new "undermining" research and the theory for reconciling this discovery) are contained in Text 1. Text 2 then shows how the attempt to reconcile the standard view and new research is flawed, and still fails to explain the discrepancy.

Q5

B

- B. It identifies a conflict between research findings and recent events that the text goes on to suggest is a consequence of a complicating factor in the data used to generate those findings.
-

Choice B is the best answer because it best describes how the underlined sentence functions in the text as a whole. The underlined sentence explains that contrary to what several studies would suggest, recent European governments suffered electorally after the launch of fiscal austerity programs. The text goes on to indicate that the researchers generated their findings from data that didn't reveal the true political risk of austerity measures because the data were based on cases in which governments had set austerity programs to take effect after the next election, a practice the European governments that recently suffered electorally didn't adhere to, thus introducing a complicating factor resulting in a conflict between the research findings and recent events.

Choice A is incorrect because the underlined sentence doesn't indicate that the discrepancy described in the text is between observations made in study settings and observations made in real-world settings. Rather, the underlined sentence indicates that the outcome of recent events is contrary to what would be expected based on the findings of several studies. Additionally, there is nothing in the text to suggest that the studies mentioned did not use real-world data; instead, the text indicates that the data used was generated under potentially different circumstances than the recent events. Choice C is incorrect because the underlined sentence doesn't present a long-standing divergence in research findings but rather a discrepancy between past research findings and recent events that the text goes on to attribute to researchers' use of data that didn't reveal the true political risk of austerity measures. Choice D is incorrect because while the underlined sentence notes that there have been some recent exceptions to a general pattern observed in several research studies, it does not go on to attribute this exception to the researchers underestimating inconsistencies in the data. Rather, the text goes on to attribute this to a circumstance (fiscal austerity measures being implemented before an election rather than after) which adds a complicating factor into the data not accounted for in past studies.

Q6

C

C. an exhaustive

Choice C is the best answer because it most logically completes the text's discussion of historical evidence about ancient Egypt under the reign of the pharaoh Hatshepsut. In this context, "an exhaustive" account would be a thorough one. The text states that much of the evidence from her reign was purposely destroyed—in other words, there is a lack of surviving records. This context conveys that unless there are major new archaeological discoveries, an exhaustive account of Hatshepsut's reign is unlikely.

Choice A is incorrect because in this context, "an imaginative" account would be an account based on imagination, or ideas and speculation, rather than facts. The text indicates that much of the evidence of Hatshepsut's reign was deliberately destroyed, and a lack of evidence actually makes it more likely that accounts will be imaginative to some degree and not strictly factual. Choice B is incorrect because in this context, "a superficial" account would be one that is lacking in depth or concerned only with what is obvious. The text indicates that most evidence of Hatshepsut's reign was purposely destroyed, which suggests that accounts of that time are likely already somewhat superficial, since there is little information available to support deeper knowledge. Further, it would be illogical to suggest that discovering major new evidence would make it more likely that accounts would be superficial. Choice D is incorrect because "a questionable" account would be one likely to be challenged or doubted, and since the text suggests that little evidence of Hatshepsut's reign has survived, accounts of that time probably involve some speculation and thus may already be open to doubt. Further, it would be illogical to suggest that discovering major new evidence would make it more likely that accounts would be questionable.

Q7

A

A. John Fletcher's writing has a unique, readily identifiable style.

Choice A is the best answer. Text 1 states that Sykes felt Fletcher's contributions to the play were obvious because he had a distinct style in his other plays. Text 2 states that scholars generally agree "on the basis of style" that Fletcher wrote most of the three middle acts. Both texts imply that Fletcher's writing has a unique, readily identifiable style that can be used to distinguish his work from others.

Choice B is incorrect. While Text 1 refers to the women in Massinger plays, neither text compares the women of Fletcher's plays to the women of Massinger's plays. Text 2 doesn't mention Massinger at all. Choice C is incorrect. Text 1 states that Sykes disputed that Shakespeare coauthored the play, and implied that it was coauthored by Fletcher and Massinger instead. Sykes, therefore, would disagree that *The Two Noble Kinsmen* belongs in a Shakespeare compilation. Choice D is incorrect. Text 1 doesn't suggest that Massinger was inspired by Shakespeare, and Text 2 doesn't mention Massinger at all.

Q8

C

- C. It summarizes a finding suggesting that some mechanisms in the brains of certain insects resemble mechanisms in mammalian brains.
-

Choice C is the best answer because it most accurately describes the main purpose of the text, which is to summarize a finding suggesting that some mechanisms in the brains of certain insects resemble mechanisms in mammalian brains. The text begins by explaining that feelings such as pleasure and displeasure are linked to chemical processes in the brain, such as the release of dopamine when one receives a reward. The text then indicates that such processes have been seen in mammals but that researchers have recently observed similar processes involving dopamine in honeybees. Taken together, this information serves to sum up the discovery that some mechanisms in the brains of certain insects may resemble mechanisms linked to feelings such as pleasure and displeasure in mammals.

Choice A is incorrect because the text doesn't describe any experiments or experimental methods. Instead, the text describes a phenomenon that has been observed in mammals and then presents the recent observations of Huang and colleagues that this phenomenon is also seen in honeybees. Choice B is incorrect because there's nothing in the text to suggest that certain insects can express how they're feeling through particular processes. The text does indicate that certain honeybee behaviors such as foraging are linked to dopamine, but it doesn't suggest that these behaviors enable honeybees to communicate feelings or sensations. Choice D is incorrect because the text presents research showing that certain honeybee behaviors such as foraging are linked to dopamine and therefore may be motivated by similar mechanisms to those in mammalian brains, not that honeybees and mammals behave similarly when there is the possibility of reward for their actions.

Q9

A

A. negating

Choice A is the best answer. "Negating" means "reversing" or "making invalid." Proving that Vermeer worked with students would reverse the view of him as a solitary artist.

Choice B is incorrect. "Prefiguring" means "being an early indicator of." There already existed views of Vermeer as a solitary painter, so a new painting would not be an early indicator of those views. Rather, a painting proving that Vermeer had a student would contradict those earlier views. Choice C is incorrect. "Entrenching" means "solidifying." A painting proving that Vermeer had a student would not solidify views of him as solitary, but would rather contradict those views. Choice D is incorrect. "Substantiating" means "supporting with proof." A painting proving that Vermeer had a student would not support views of him as solitary, but would rather contradict those views.

Q10

A

A. As failing to consider Ellison's and Morrison's equivalent uses of the sermon within the wider cultural context in which they wrote

Choice A is the best answer. The author of Text 2 argues that Morrison's use of the sermon is not only influenced by Ellison, but also by a "community-wide strategy of resistance" to literary conventions practiced by Black American authors. Ellison, Text 2 alleges, is only one of many influences on Morrison.

Choice B is incorrect. Neither text specifically mentions sermons in works by authors other than Morrison or Ellison, only a tendency towards eroding "the division between oral and written forms" among Black American writers. Choice C is incorrect. Both texts describe similarities between the works of Ellison and Morrison, and neither points out instances of divergence. Text 2 simply suggests that Morrison was influenced by more than just Ellison. Choice D is incorrect. While Text 2 does discuss Morrison's resistance to certain literary conventions, it's unclear what it would mean for the underlined claim to be "indebted" to that tradition. This choice recycles language from the text, but not in a way that makes any coherent point.

Notes

Accept equivalent forms (e.g. $0.25 \equiv 1/4$). For grid-in items, decimal and fraction answers are both valid.
