Q1**C**

- C. The text presents Mukerjee's critique of the social sciences and then provides an example of his attempts to address issues he identified in his critique.

Choice C is the best answer. The text does indeed present Mukerjee's critique of the social sciences—that they were too Eurocentric—and then provides an example of how he attempted to address the issues he identified: by suggesting a social science model based on the Indian village.

Choice A is incorrect. The text doesn't discuss Mukerjee's early training or his oversight of the implementation of social policies at all. Choice B is incorrect. The text never discusses any other Indian social scientists. Choice D is incorrect. The text never mentions other social scientists' responses to Mukerjee's work.

Q2

B

B. elasticity

Choice B is the best answer because it most logically completes the text’s discussion of black swan familial structures. In this context, “elasticity” means flexibility or adaptability. The text provides examples of flexible family arrangements among black swans: successful male-female breeding pairs are known to foster other pairs’ cygnets, and while they are less common, male-male pairs also successfully rear cygnets. This context therefore emphasizes the flexibility or elasticity of black swan familial structures, showing how this trait contributes to the success of the species.

Choice A is incorrect. Although close family units may show “cohesion,” which refers to unity or harmony within a group, the text’s focus is on the variety and adaptability of black swan family structures. The examples given—fostering other pairs’ cygnets and forming male-male as well as female-male pairs—highlight flexibility rather than cohesion, emphasizing family structures that vary from the model in which a breeding pair raises its own young. Choice C is incorrect. While “affection,” or fondness, might be present in black swan relationships, the text doesn’t focus on emotional bonds but rather on the structural flexibility of black swan familial arrangements. The examples provided demonstrate adaptable breeding and rearing practices rather than affectionate behaviors. Choice D is incorrect because “reciprocity” would suggest mutual exchange or cooperation between parties. Although the text mentions the fostering of cygnets by different successful breeding pairs, it doesn’t establish that this is based on reciprocal exchanges. The focus is instead on the flexibility of family structures and the effectiveness of these varied structures in rearing young.

Q3

D

- D. It discusses the findings of a study that evaluated the effects of exposing a plant species to lunar soil conditions.
-

Choice D is the best answer. The text describes an experiment wherein space scientists compared plant growth in terrestrial and lunar soil conditions. It then discusses the findings of the study, including the fact that all the seeds germinated but that the plants grown in lunar soil exhibited signs of stress.

Choice A is incorrect. The text doesn't address this question, and never describes any specific characteristics of either soil. It merely describes the outcome of an experiment that exposed a plant species to lunar soil conditions. Choice B is incorrect. The text never compares methods of assessing indicators of stress—instead, it simply mentions several stress indicators observed in the study (red pigmentation, reduced leaf size, and inhibited growth rates). Choice C is incorrect. The text doesn't present any evidence that we could never achieve seed germination in lunar habitats, and in fact states that the seeds in the lunar soil did germinate.

Q4

B

B. manifest in

Choice B is the best answer because it most logically completes the text's discussion of the Kelmscott Press's books. In this context, "manifest in" means evident or apparent from. The text states that the Kelmscott Press, which was cofounded by William Morris, produced its books using preindustrial methods. The text notes the similarity between those methods, which include the use of handmade materials and intricate ornamentation, and methods used in the creation of medieval manuscripts. This context suggests that Morris's repudiation of industrialization is apparent from, or manifest in, the methods and materials his company employed.

Choice A is incorrect because there is nothing in the text to suggest that Morris's repudiation of industrialization is "insensible to," or unaware of or lacking perception of, the use of handmade materials and intricate ornamentation in the production of the Kelmscott editions. Instead, the text suggests that the methods and materials used to produce the Kelmscott editions are evidence of Morris's repudiation of industrialization. Choice C is incorrect because it would not make sense to say that Morris's repudiation of industrialization was "scrutinized by," or examined closely by, the Kelmscott editions' use of handmade materials and intricate ornamentation. Although creating the Kelmscott editions may have involved examining the books closely, the text does not mention this aspect of Morris's work, and in any case, the action of using certain materials to create those editions cannot scrutinize Morris's attitude toward industrialization. Choice D is incorrect because the text gives no indication that Morris's repudiation of industrialization is "complicated by," or made more complex or difficult by, the Kelmscott Press's use of preindustrial methods and handcrafted elements to produce books. Instead, the text presents those methods as exemplifying Morris's repudiation of industrialization.

Q5

C

- C. It conveys Camillo's recognition that one benefit his presence may afford the king of Sicily is merely speculative.
-

Choice C is the best answer because it most accurately describes how the underlined portion functions in the text as a whole. In the text, Camillo explains to Polixenes that he wants to return home after his long absence and that Sicily's king has summoned him. In the underlined portion, Camillo adds that he also wants to return because he might provide comfort to the king's sorrows ("to whose feeling sorrows I might be some allay") but then clarifies that his belief about being able to comfort the king is a presumption—that is, something he thinks is true but can't be certain of. Thus, the underlined portion indicates that Camillo recognizes that one benefit his presence may offer is merely speculative.

Choice A is incorrect because the underlined portion conveys Camillo's hope that he might comfort the king of Sicily, which does suggest a personal choice contributing to Camillo's decision to leave; the idea that Camillo isn't choosing to leave is established in a different part of the text, when he says "the penitent king, my master, hath sent for me." Choice B is incorrect because the underlined portion doesn't suggest Camillo feels compelled to justify his decision to leave. Rather than expressing a need to persuade Polixenes that his departure is warranted, Camillo's statement simply reveals his awareness that he assumes rather than knows with certainty that his presence will comfort the king of Sicily. Choice D is incorrect because nothing in the text indicates that Camillo's primary motivation for returning to Sicily is his concern for the king's well-being; Camillo mentions first that he wants to return home because he has been away for so long, then adds that the king has summoned him and that he hopes his presence will comfort the king. The underlined portion simply conveys Camillo's awareness that offering comfort is a hope rather than a certainty; it doesn't suggest that the king's well-being is his main concern.

Q6

C

C. anomaly

Choice C is the best answer. An "anomaly" is something that deviates from norms or expectations. In this case, the elkhorn coral is an anomaly because it can pass on somatic mutations, whereas most other animals can't.

Choice A is incorrect. A "hypothesis" is "a theory about something," but no theories are provided about elkhorn coral in this text, just facts. Choice B is incorrect. "Affinity" represents "an inclination or liking toward something." As genetic mutations tend to occur without any conscious effort, you can't really have an inclination toward passing on somatic mutations.

Choice D is incorrect. "Corroboration" means "evidence to support or prove something." Because elkhorn coral do the opposite of what most animals do, they do not provide corroboration of the theory that somatic mutations can't be passed onto offspring. Rather, they show the opposite.

Q7

B

B. It presents an account of a misunderstanding.

Choice B is the best answer. The text tells a story of a first impression that turned out to be wrong: a serious American savant was dismissive of a goofy-looking, wisecracking guest at a British party, and then was shocked to learn that the guest was actually a prominent British chemist and inventor.

Choice A is incorrect. This is too strong and too narrow. Only at the very end is the savant "thrown aback" by the fact that the man was Sir Humphry Davy—he's not "embarrassed about his own behavior." Choice C is incorrect. This isn't the main purpose. The text never provides the history of how Sir Humphry Davy came to be famous. Nor does it provide any history for the American savant. Choice D is incorrect. This is too narrow. It doesn't include the second half of the text, where the savant gets into a conversation with the man and then finds out that the man is Sir Humphry Davy.

Q8

B

B. Perceptible

Choice B is the best answer because as used in the text, “manifest” most nearly means perceptible or detectable. The text indicates that the sun was “already down,” meaning it was below the horizon and not directly visible. However, the sun’s presence was nonetheless perceptible or manifest in the “tongues of fire” (or beams of light) that still flickered in the darkening sky.

Choice A is incorrect. Although in some contexts “manifest” can mean “realized” or “brought into being,” that is not the context here. Rather, the text is about how the sun’s presence was perceptible or manifest in the “darting” beams of light that could still be seen in the sky. Choice C is incorrect. This choice would suggest that the sun is situated, or located, in the light it emits, which is not supported by the surrounding context. Rather, the text is about how the sun’s presence was perceptible or manifest in the remaining light that could still be seen in the sky. Choice D is incorrect. Although the text is about the decreasing light in the scene at sunset, the text’s use of “manifest” is about how the sun’s presence was nonetheless perceptible or manifest in the “tongues of fire” still visible in the sky as night approached.

Q9

D

- D. It discusses the study by O'Brien and Ahmed to illustrate why caution is needed when making claims about the effects of posture on cognition.
-

Choice D is the best answer because it most accurately describes the main purpose of the text. The text notes that although some studies have suggested that posture may have an effect on cognition, this phenomenon should not be overstated. In other words, the text begins by urging caution and restraint when discussing the effects of posture on cognition, implying that even though some studies have shown posture to affect cognition, we should not assume that posture always affects cognition or does so in a strong way. The text goes on to discuss O'Brien and Ahmed's study as a "case in point" (that is, as an example of the point made previously). According to the text, O'Brien and Ahmed hypothesized that since standing is more cognitively demanding than sitting, standing subjects in their experiment would respond differently to decision-making tasks than sitting subjects would, which would show an effect of posture on cognition. What the researchers actually found, however, was that the standing and sitting subjects performed the same—posture did not affect cognition. By presenting a circumstance in which posture does not appear to affect cognition, the discussion of O'Brien and Ahmed's study shows why it is important not to overstate the phenomenon. The purpose of the text, therefore, is to discuss O'Brien and Ahmed's study to illustrate why caution is needed when making claims about posture's effects on cognition.

Choice A is incorrect because the text discusses O'Brien and Ahmed's study as an example of why caution is needed when discussing posture's effects on cognition, not as an example of how research findings related to posture and cognition are often misunderstood. Although the text does warn against misunderstanding the scope of the relationship between posture and cognition that has been reported in some previous studies, O'Brien and Ahmed's study is not one of those studies, and there is no suggestion that anyone has misunderstood O'Brien and Ahmed's findings. Choice B is incorrect because the text makes no mention of the methods used in previous studies of the effects of posture on cognition. Although the text does urge caution when discussing posture's effects on cognition, it does not critique the results of studies that suggested that posture can affect cognition. Instead, the text suggests that such results should not be exaggerated or taken too broadly. Choice C is incorrect because although the text implies that overstating posture's effects on cognition would be a problem, nothing in the text suggests that O'Brien and Ahmed share that view or that they attempted to solve that problem. O'Brien and Ahmed are presented as hypothesizing that posture would affect cognition in their study, not as trying to resolve the problem the text describes.

Q10

B

B. impending

Choice B is the best answer because it most logically completes the text's discussion of advance indications of solar flares. In this context the word "impending" means imminent or approaching. The text mentions a study by Leka and colleagues that found that the Sun's corona provides an advance indication of solar flares. The text then points out why such an advance indication would be useful—solar flares can interfere with communications on Earth—and concludes by describing the characteristic of the corona that gives warning of a solar flare. The text indicates that this characteristic—increased brightness in a particular region of the corona—comes before the appearance of the flare. Therefore, in context, the best answer would indicate that the flare is approaching, or impending.

Choice A is incorrect. The best answer would be one that indicates that the increased brightness of the Sun's corona precedes the appearance of the flare. But if the flare were "antecedent," or previous, then the flare would instead precede the appearance of the increased brightness of the corona, a statement that is logically inconsistent. Choice C is incorrect. The word "innocuous," or harmless, does not logically complete the text; since solar flares can interfere with communications on Earth, they cannot reasonably be described as innocuous. Choice D is incorrect. If the solar flares have an advance indication of their appearance, then there must therefore be a time before the appearance of the flares when they do not exist. But the word "perpetual," or never-ending, would in context indicate that the flare exists at the same time as the advance indication provided by the Sun's corona, which would not make logical sense.

Notes

Accept equivalent forms (e.g. $0.25 \equiv 1/4$). For grid-in items, decimal and fraction answers are both valid.
