Q1**D**

D. Accordingly,

Choice D is the best answer. "Accordingly" logically signals that this sentence states a result or consequence of the previous information about the 2003 Human Genome Project. Taking into account an important lesson of the 2003 project (that a gene is affected by interactions with the protein products of other genes), research has begun to consider the human proteome instead of just the genome.

Choice A is incorrect because "in other words" illogically signals that the information in this sentence is a paraphrase or restatement of the previous information about the 2003 Human Genome Project. Instead, this sentence states a result or consequence of that information. Choice B is incorrect because "that said" illogically signals that the information in this sentence qualifies or contrasts with the previous information about the 2003 Human Genome Project. Instead, this sentence states a result or consequence of that information. Choice C is incorrect because "for example" illogically signals that this sentence provides an example supporting the previous information about the 2003 Human Genome Project. Instead, this sentence states a result or consequence of that information.

Q2**C**

C. Humans may have first arrived in the Americas by sea, traveling between Pacific Ocean islands and coastlines and subsisting on a variety of resources.

Choice C is the best answer. This choice summarizes the main idea of the kelp highway hypothesis, providing a high-level overview of how the hypothesis explains human migration to the Americas.

Choice A is incorrect. This choice describes one aspect of the proposed scenario but doesn't discuss human migration, which is the main focus of the kelp highway hypothesis. Choice B is incorrect. This choice introduces the kelp highway hypothesis but doesn't explain what it entails. Choice D is incorrect. This choice describes one element of the proposed scenario but doesn't discuss human migration, which is the main focus of the kelp highway hypothesis.

Q3

D

D. for instance,

Choice D is the best answer. “For instance” logically signals that the details in this sentence—that Mexican conductor Alondra de la Parra and Colombian conductor Lina Gonzalez-Granados took new conducting positions—are examples supporting the previous claim about the new generation of artists.

Choice A is incorrect because “in addition” illogically signals that the details in this sentence about de la Parra and Gonzalez-Granados are merely additional facts related to the previous claim about the new generation of artists. Instead, they are examples supporting that claim. Choice B is incorrect because “lastly” illogically signals that the details in this sentence about de la Parra and Gonzalez-Granados are the last step or a concluding summary of the previous claim about the new generation of artists. Instead, they are examples supporting that claim. Choice C is incorrect because “granted” illogically signals that the details in this sentence about de la Parra and Gonzalez-Granados are exceptions to the previous claim about the new generation of artists. Instead, they are examples supporting that claim.

Q4

B

B. Seeking to understand how ducklings swimming in a line behind their mother save energy, Zhiming Yuan used computer simulations to study the effect of the mother duck’s wake.

Choice B is the best answer. The sentence presents both the study and its methodology (that is, the researcher’s approach to the problem), explaining that Yuan used computer simulations to study the effect of the mother duck’s wake on the ducklings’ energy expenditure.

Choice A is incorrect. The sentence describes the findings of Yuan’s study; it doesn’t present the study and its methodology. Choice C is incorrect. While the sentence provides general information about Yuan’s study, it doesn’t present the study’s methodology. Choice D is incorrect. The sentence describes the findings of Yuan’s study; it doesn’t present the study and its methodology.

Q5

C

C. Granted,

Choice C is the best answer. “Granted” logically signals that the following information—that iconicity is not as highly correlated with acquisition as sign frequency—is true in spite of the information about the correlation between iconicity and acquisition in the previous sentence.

Choice A is incorrect because “in fact” illogically signals that the sentence that follows either emphasizes or refutes the information in the previous sentence regarding the correlation between iconicity and acquisition. Instead, the sentence that follows provides additional information that is true in spite of the preceding information; it neither emphasizes nor refutes that information. Choice B is incorrect because “in other words” illogically signals that the sentence that follows is a restatement of the information in the previous sentence; instead, the sentence that follows provides additional information that is true in spite of the preceding information. Choice D is incorrect because “as a result” illogically signals that the sentence that follows is a result of the information in the previous sentence regarding the correlation between iconicity and acquisition; instead, the sentence that follows is true in spite of the preceding information.

Q6

A

- A. In considering some but not all cognitive systems modular, Fodorian modularity is not as expansive in its definition of modularity as MMH is.
-

Choice A is the best answer. The sentence compares Fodor's hypothesis with Carruthers's, noting that because Fodorian modularity considers some but not all cognitive systems modular, it is not as expansive in its definition of modularity as Carruthers's MMH, which includes all cognitive systems.

Choice B is incorrect. The sentence describes Carruthers's hypothesis—that modularity of mind includes all cognitive systems—but indicates only that this hypothesis followed Fodor's 1983 hypothesis rather than making a comparison between the hypotheses. Choice C is incorrect. The sentence misrepresents a difference between Fodor's and Carruthers's hypotheses. According to the information in the notes, both Fodor and Carruthers consider low-level cognitive systems modular, and their difference lies in whether they also consider high-level systems modular. Choice D is incorrect. The sentence misrepresents a difference between Fodor's and Carruthers's hypotheses. According to the information in the notes, both Fodor and Carruthers consider the mind to be at least partly composed of innate neural structures (modules). Their difference lies in whether they consider high-level systems modular.

Q7

C

C. Again and again,

Choice C is the best answer. "Again and again" logically signals that the information in this sentence—that new calculations revealed increasingly precise coordinates for the location of the prime meridian—refers to events that occurred multiple times in the decades after the establishment of the prime meridian in 1884 (which is described in the preceding sentence).

Choice A is incorrect because "specifically" illogically signals that the information in this sentence provides specific, precise details elaborating on the description of the prime meridian's establishment in the previous sentence. Instead, the sentence indicates that increasingly precise coordinates were revealed on multiple occasions in the decades following the meridian's establishment. Choice B is incorrect because "to that end" illogically signals that the information in this sentence is a means of accomplishing a goal established in the previous sentence about the prime meridian's establishment. Instead, the sentence indicates that increasingly precise coordinates were revealed on multiple occasions in the decades following the meridian's establishment. Choice D is incorrect because "granted" illogically signals that the information in this sentence is in opposition to the information about the prime meridian's establishment in the previous sentence. Instead, the sentence indicates that increasingly precise coordinates were revealed on multiple occasions in the decades following the meridian's establishment.

Q8

B

B. *Pacha, Llaqta, Wasichay: Indigenous Space, Modern Architecture, New Art*, an exhibition at the Whitney Museum of American Art, featured works by seven emerging Latino artists.

Choice B is the best answer. The sentence describes the 2018 exhibition Guerrero curated, noting that the exhibition, which was titled *Pacha, Llaqta, Wasichay: Indigenous Space, Modern Architecture, New Art*, featured the works of seven emerging Latino artists.

Choice A is incorrect. The sentence describes the exhibition Guerrero curated in 2020; it doesn't describe her 2018 exhibition. Choice C is incorrect. The sentence emphasizes a similarity between the two exhibitions Guerrero curated; it doesn't describe her 2018 exhibition. Choice D is incorrect. The sentence emphasizes a difference between the two exhibitions Guerrero curated; it doesn't describe her 2018 exhibition.

Q9

D

D. therefore,

Choice D is the best answer. This sentence is arguing that new evidence contradicting popular beliefs about “tulip mania” should cast doubt on those beliefs. “Therefore” is a cause-and-effect transition, which fits perfectly in this context.

Choice A is incorrect. This choice uses an exemplification transition, which doesn’t make sense here. Skepticism about the popular beliefs is not an example of recent evidence contradicting those beliefs—rather, skepticism is an effect of that recent evidence. Choice B is incorrect. This choice uses a disagreement transition. But this sentence doesn’t disagree with the previous sentence. Instead, it connects a cause from the previous sentence (new evidence that tulip mania was not as disastrous as thought) to an effect (that we should look with skepticism upon the myth about its disastrousness). Choice C is incorrect. This choice uses a disagreement transition. But this sentence doesn’t disagree with the previous sentence. Instead, it connects a cause from the previous sentence (new evidence that tulip mania was not as disastrous as thought) to an effect (that we should look with skepticism upon the myth about its disastrousness).

Q10

D

- D. Awarding more points per unit of land than points per resident, the formula for distributing Storting seats overrepresents less populated rural districts with large tracts of land.
-

Choice D is the best answer. By noting that the formula for distributing Storting seats overrepresents less populated rural districts, the sentence effectively refutes a claim that malapportionment in the Storting favors small urban districts.

Choice A is incorrect because the sentence claims that malapportionment in the Storting favors small urban districts; it doesn't refute such a claim. Moreover, it misrepresents information in the notes. According to the notes, the formula for distributing seats overrepresents less populated, not more populated, districts. Choice B is incorrect. While the sentence appears to refute a claim that malapportionment in the Storting favors small urban districts, it misrepresents information in the notes. According to the notes, the formula for distributing seats overrepresents less populated, not more populated, districts. Choice C is incorrect. The sentence explains what malapportionment is but doesn't address malapportionment in the Storting specifically.

Notes

Accept equivalent forms (e.g. $0.25 \equiv 1/4$). For grid-in items, decimal and fraction answers are both valid.
