Q1**D****D. regions**

Choice D is the best answer. The convention being tested is punctuation between coordinates in a sentence. The two elements "how...regions" and "what...ocean" work together as coordinates to complete the description of what the team was able to determine. Because there are only two coordinates in this case (as opposed to a series of three or more), no punctuation is needed between them.

Choice A is incorrect because no punctuation is needed between the coordinates "how...regions" and "what...ocean." Choice B is incorrect because no punctuation is needed between the coordinates "how...regions" and "what...ocean." Choice C is incorrect because no punctuation is needed between the coordinates "how...regions" and "what...ocean."

Notes

Accept equivalent forms (e.g. $0.25 \equiv 1/4$). For grid-in items, decimal and fraction answers are both valid.
