Q1**D**

- D. By asserting that a more definitive form of evidence than the computer models suggests a different timeline for the onset of plate tectonics on Earth

Choice D is the best answer because it reflects how the author of Text 2 would most likely respond to what the researchers mentioned in Text 1 contend. Text 1 discusses the lack of knowledge of how plate tectonics on Earth began. Text 1 also mentions researchers who contend that movements of tectonic plates began around 3 billion years ago. As support for this assertion, these researchers cite computer models (which are simulations, not empirical evidence) of the temperature in Earth's mantle that show that at that time, the mantle would have been sufficiently molten for plates to move. However, the author of Text 2 asserts that empirical evidence from the geological record is necessary to make plausible claims about when tectonic movement began. Text 2 mentions an analysis performed by Wriju Chowdhury and his team of the geochemistry of zircon crystals (which would constitute empirical evidence). Chowdhury and his team argue, based on this analysis, that tectonic plates may have begun to move as early as 4.2 billion years ago. Therefore, since the author of Text 2 would consider Chowdhury et al.'s empirical evidence to be more conclusive than the computer models cited in Text 1, the author of Text 2 would most likely assert that a more definitive form of evidence than the computer models suggests a different timeline for the onset of plate tectonics on Earth.

Choice A is incorrect because the author of Text 2 makes no claims about the temperature of Earth's mantle and therefore wouldn't argue that the temperature of Earth's mantle 3 billion years ago was insufficient to allow tectonic movement. Choice B is incorrect because the author of Text 2 claims that empirical evidence is needed to fix the earliest date of tectonic movement. Computer models are simulations, not empirical evidence, so the author of Text 2 wouldn't distinguish between different kinds of computer models but would instead argue that no computer models can reliably predict the onset of plate tectonics. Choice C is incorrect because the author of Text 2 wouldn't consider any computer model to be able to provide evidence to support a plausible claim about tectonic movement, no matter how much such models were improved. The author of Text 2 would only accept empirical evidence.

Q2

C

C. It describes part of the Tule geese's typical winter migration journey.

Choice C is the best answer because it best states how the underlined portion functions in the text as a whole. The first sentence states that Tule geese typically take four days to migrate south. Then in the next sentence, which contains the underlined portion, the text describes the first part of that journey, which begins with the geese flying over the Gulf of Alaska while keeping about 100 miles from the Canadian shore. The rest of the text details the remainder of the geese's typical journey and then mentions circumstances in 2020 that resulted in the geese taking an unusually long time to complete it. Thus, the underlined portion describes part of the Tule geese's typical winter migration journey.

Choice A is incorrect. Although the text concludes by stating that in 2020, Tule geese took twice as long to complete their typical migration, which suggests a change in their usual flight behavior, the underlined portion doesn't discuss this. Instead, the underlined portion describes the first part of the Tule geese's typical winter migration journey over the Gulf of Alaska. Choice B is incorrect. Although the sentence containing the underlined portion mentions that Tule geese breed in Alaska, the underlined portion doesn't explain why the geese breed in that location. Rather, the text mentions Alaska to explain that it's the starting point of the Tule geese's typical winter migration. Choice D is incorrect because the underlined portion doesn't discuss any other birds that migrate south for the winter. In fact, the text is only concerned with the migration of Tule geese.

Q3

B

B. irrelevant

Choice B is the best answer because it most logically completes the text's discussion about people's tendency to dismiss claims from sources perceived as self-interested, or acting for their own advantage. In this context, "irrelevant" means not applicable to the matter at hand. The text explains that as a matter of logical reasoning, the source of a claim has nothing to do with the claim's truthfulness—a claim is either true or false in actuality, regardless of where it originates. This context suggests that even though people may distrust a claim based on its source, the source of the claim is actually irrelevant.

Choice A is incorrect because in this context, "indistinct" would mean uncertain or not clearly recognizable. Instead of suggesting that the source of a claim can't be determined with certainty, the text suggests that recognizing a source and having an opinion of it simply doesn't matter because as a matter of logic, a claim is true or false in actuality, regardless of where it originates. Choice C is incorrect because in this context, "indisputable" would mean impossible to question or deny. Although the text suggests that it isn't logical to assume a claim is false just because its source appears to be self-interested, it doesn't go so far as to suggest that the source of a claim can't be questioned—the text instead makes the point that from a logical standpoint, the source of a claim doesn't matter because the claim is either true or false in and of itself. Choice D is incorrect because in this context, "implicit" would mean suggested or understood without being directly expressed. Nothing in the text suggests that logically, the source of a claim is only suggested; instead of addressing whether sources can be directly identified, the text focuses on the idea that sources don't matter because a claim is true or false in actuality, regardless of where it originates.

Q4

C

C. Changing consumer behaviors are leading to changes in music-related businesses.

Choice C is the best answer. Both authors mention how consumer behaviors have shifted, and how this affects different aspects of the music industry. Text 1 states that consumers enjoy purchasing “lived experiences,” and that this influences how organizers design music festivals. Text 2 states that consumers are using streaming services more, and that this reduces album sales and increases the importance of live performances for musicians.

Choice A is incorrect. Neither text claims that consumers prefer streaming to festivals, or that these are mutually exclusive options. Text 1 implies that festivals are popular and profitable, and Text 2 never suggests that streaming services diminish the demand for live music. Choice B is incorrect. This choice misreads Text 1, which identifies music festivals as just one example of a broader trend of purchasing “lived experiences.” Text 2 doesn’t mention growing interest in purchasing experiences, in the music industry or otherwise. Choice D is incorrect. Neither text establishes a cause/effect relationship between the demand for festivals and the demand for streaming platforms. Text 1 does not mention streaming platforms at all, and Text 2 does not imply that streaming platforms benefit from the popularity of festivals.

Q5

A

A. To examine how Derksen's musical compositions blend cultures

Choice A is the best answer because it most accurately describes the main purpose of the text, which is to discuss how Derksen's compositions incorporate elements from both Indigenous and classical music. After introducing Derksen, the text describes how the songs Derksen composed for her album *Orchestral Powwow* feature aspects of the two musical traditions. Specifically, the text notes that Derksen wrote songs in the style of traditional powwow music but accompanied them with classical arrangements played by an orchestra that followed the beat of a powwow drum rather than the directions of a conductor. In this way, Derksen's compositions blend different cultures.

Choice B is incorrect because although the text suggests that Derksen's songs contain innovative elements since they blend styles from two different musical traditions, it doesn't discuss whether her compositions constitute a new style of music, let alone whether Derksen should be recognized for creating a new style of music. Choice C is incorrect because the text doesn't mention any difficulties Derksen encountered when producing her album. Rather, the text describes how the songs on the album exemplify how Derksen combines music from two different cultures. Choice D is incorrect because although the text mentions Derksen's Cree heritage and suggests that she relies on knowledge of both Indigenous and classical music when she composes her songs, it doesn't discuss her musical training. Additionally, the text is primarily focused on how Derksen combines different cultural traditions, not on contrasting Derksen's training with her heritage.

Q6

B

B. hampered

Choice B is the best answer because it most logically completes the text’s discussion of a scientific paradox regarding water and life during Earth’s early history. In this context, “hampered” means hindered or impeded. The text discusses a paradox, or a situation that seems to contradict itself, and indicates that one half of the paradox is that the presence of water is necessary to support most biochemical reactions that enable life. The contradictory idea, then, would be a case of the presence of water not supporting such reactions; this context suggests that the other half of the paradox is that when oceans covered most of the planet, the water likely hindered or impeded a biochemical process (the formation of biomolecules) that is important for all living organisms.

Choice A is incorrect. In this context, “reflected” would mean showed or gave an indication. The text focuses on a paradox, or a seemingly self-contradictory situation, having to do with the role of water in supporting life; since the first part of the paradox has to do with water usually being essential for enabling life, the second part of the paradox should have to do with water having a negative effect on life, and water being an indication of a biomolecular process important for life wouldn’t be a negative thing. Choice C is incorrect. In this context, “imitated” would mean mimicked or copied, and it isn’t clear what it would mean to say that water being present on early Earth’s surface somehow copied the creation of biomolecules in living organisms. Choice D is incorrect. In this context, “exploited” would mean used or took advantage of, and it isn’t clear what it would mean to say that the presence of water—the fact of water being present—on early Earth’s surface somehow took advantage of a biomolecular process occurring in living organisms.

Q7

A

- A. It is understandable because the fossil does look like it could be related to birds, even though *O. khaungraae* is probably a lizard.
-

Choice A is the best answer because it reflects what the paleontologists in Text 2 would most likely say about what the researchers in Text 1 initially thought. Text 1 focuses on the discovery of a strange fossil consisting of the skull of the extinct species *Oculudentavis khaungraae*. According to Text 1, the fossil has features that appear to be avian, or related to birds, which led researchers to initially think that the fossil might be a very small avian dinosaur. Text 2 begins by noting the discovery of a second fossil similar to the one discussed in Text 1, then explains that based on detailed studies of both fossils, paleontologists think that the two creatures were probably unusual lizards, even though the skulls appeared avian at first. This suggests that the paleontologists in Text 2 recognize that the fossils do indeed look like they could be related to birds. For this reason, the paleontologists in Text 2 would most likely say that the initial thought of the researchers in Text 1—that the fossil was avian—is understandable, even if the fossil is probably not avian but rather is from a lizard.

Choice B is incorrect because Text 2 indicates that the fossils initially looked avian, so the paleontologists described in Text 2 wouldn't be confused by the researchers in Text 1 initially thinking that *O. khaungraae* might be related to birds. The paleontologists would find that initial thought understandable, not confusing. Choice C is incorrect because Text 1 never mentions lizards, so it wouldn't make sense for the paleontologists in Text 2 to say that the researchers in Text 1 mistakenly assumed that *O. khaungraae* must be a lizard. Choice D is incorrect. Although the paleontologists in Text 2 might agree that the initial thought of the researchers in Text 1 was reasonable, nothing in Text 2 suggests that the two skulls were shaped differently.

Q8

D

D. It explains how certain birds promote seed germination in Atacama Desert soil.

Choice D is the best answer because it most accurately describes how the underlined portion functions in the text as a whole. The first two sentences establish a natural phenomenon: there is a richness of plant life found in the Atacama Desert despite the hard soil that makes it challenging for seeds to germinate. The next sentence, which contains the underlined portion, offers a potential explanation for the phenomenon: local birds dig ground nests exposing seeds to moisture and materials in the soil necessary for germination. The last sentence summarizes a study that compared the fertility of mounds of dirt dug up by birds to mounds that were undisturbed to support the explanation in the underlined portion. Thus, the underlined portion mainly functions to explain how certain birds promote seed germination in the Atacama Desert soil.

Choice A is incorrect because the underlined portion doesn't address the topic of the soil's tough crust or its formation. Instead, the text elaborates on the idea that local birds that build ground nests may help seeds germinate in the hard soil. Choice B is incorrect because the underlined portion describes how some birds may support seed germination in Atacama Desert soil but doesn't describe how the seeds are deposited into the soil before germination begins. Choice C is incorrect because neither the underlined portion nor the text as a whole identifies a reason that a particular bird species may choose to dig ground nests in the Atacama Desert soil.

Q9

C

C. advantageous

Choice C is the best answer because it most logically completes the text's discussion of businesses being featured in *The Illustrated History of San Mateo County*. In this context, "advantageous" means beneficial or providing a favorable position. The text explains that being included in the book "suggested that a business was an important part of the community," and it can be inferred that an enhanced reputation within the local community would benefit a business, commercially or otherwise. This context supports the idea that being featured in this publication would be advantageous.

Choice A is incorrect because in this context, "risky" would suggest that being featured in *The Illustrated History of San Mateo County* might have negative consequences for a business. However, the text implies only positive outcomes since inclusion indicated importance within the local community. Choice B is incorrect because "misleading" would mean deceptive or deliberately giving a wrong impression, but the text doesn't indicate there was something deceptive about being featured in *The Illustrated History of San Mateo County*; rather, it suggests that inclusion indicated community importance. Choice D is incorrect because "unremarkable" would mean common or ordinary, which doesn't make sense in context. The text suggests that inclusion in *The Illustrated History of San Mateo County* instead conferred a special status on a business by conveying its importance in the local community.

Q10

D

D. By noting that a possible solution to the problem is available

Choice D is the best answer because Text 2 presents a possible solution to the problem identified in Text 1—that is, how disparities in the criteria used by different countries to define urban settlements make it "difficult for researchers to compare aspects of urbanization in different countries." Text 2 describes the creation of a shared framework for studying global urbanization: "global definitions of common types of settlements" and a "new measure called the 'degree of urbanization'" that "allows researchers to better understand global urbanization rates."

Choice A is incorrect. Although Text 2 mentions "a group of six international organizations" that developed criteria and a measure related to settlements and urbanization, no organization or institution is singled out to perform further research. Choice B is incorrect because both texts are about urbanization research and neither mentions any other fields of study. Choice C is incorrect. Text 2 discusses a possible solution to the terminological problem in global urbanization research, not additional areas of difficulty in the field.

Notes

Accept equivalent forms (e.g. $0.25 \equiv 1/4$). For grid-in items, decimal and fraction answers are both valid.
