Q1

CRAFT AND STRUCTURE

Horizontal gene transfer occurs when an organism of one species acquires genetic material from an organism of another species through nonreproductive means. The genetic material can then be transferred “vertically” in the second species—that is, through reproductive inheritance. Scientist Atma Ivancevic and her team have hypothesized infection by invertebrate parasites as a mechanism of horizontal gene transfer between vertebrate species: while feeding, a parasite could acquire a gene from one host, then relocate to a host from a different vertebrate species and transfer the gene to it in turn.

Which choice best describes the function of the underlined portion in the text as a whole?

- A. It explains why parasites are less susceptible to horizontal gene transfer than their hosts are.
- B. It clarifies why some genes are more likely to be transferred horizontally than others are.
- C. It contrasts how horizontal gene transfer occurs among vertebrates with how it occurs among invertebrates.
- D. It describes a means by which horizontal gene transfer might occur among vertebrates.

Like the 1945 play it reimagines—Federico García Lorca’s *The House of Bernarda Alba*—Marcus Gardley’s 2014 play *The House That Will Not Stand* prominently features women. In both plays, the all-female cast _____ blank an array of female characters, including a strong mother and several daughters dealing with individual struggles.

Which choice completes the text with the most logical and precise word or phrase?

- A. engulfs
- B. encourages
- C. comprises
- D. provokes

Researchers have long hypothesized that woolly mammoths were hunted to extinction in North America by humans using spears with grooved tips known as Clovis points. One anthropologist set out to test this hypothesis. Using a mechanical spear-thrower, he launched spears with Clovis points into mounds of clay—substitutes for the animals’ large bodies. The projectiles generally penetrated only a few inches into the clay, an amount insufficient to have harmed most woolly mammoths. This led the anthropologist to conclude that hunters using spears with Clovis points likely weren’t the principal drivers of the extinction.

Which choice best states the main purpose of the text?

- A. To argue for the significance of new findings amid an ongoing debate among researchers
- B. To discuss the advantages and disadvantages of the method used in an experiment
- C. To summarize two competing hypotheses and a major finding associated with each one
- D. To describe an experiment whose results cast doubt on an established hypothesis

Stars form in cloudlike swirls of gas and dust that cannot be touched, but astrophysicist Nia Imara believes these formations need not remain completely _____ blank to researchers: she uses simulation data and sophisticated 3D printers to produce interactive models of these stellar nurseries.

Which choice completes the text with the most logical and precise word or phrase?

- A. repeatable
- B. explicable
- C. regrettable
- D. intangible

Very little is known about the role nocturnal insects, such as moths, play in flower pollination because it is difficult to monitor insects at night. To address this problem, a team of scientists used time-lapse cameras to record pollinator visits to red clover all day and night. The recordings showed that while most pollinator visits were by bumblebees, one-third of visits were by moths. Additionally, flowers that were visited by both moths and bees produced more seeds than flowers that were only visited by bees.

Which choice best states the function of the underlined sentence?

- A. To describe an approach a team of scientists used to study pollinators
- B. To question a claim scientists make about pollinators
- C. To explain why moths prefer red clover to other flowers
- D. To announce an unexpected research finding about red clover

In a 2019 study, Jeremy Gunawardena and colleagues found that the single-celled protozoan *Stentor roeseli* not only uses strategies to escape irritating stimuli but also switches strategies when one fails. This evidence of protozoans sophisticatedly “changing their minds” demonstrates that single-celled organisms may not be limited to _____ blank behaviors.

Which choice completes the text with the most logical and precise word or phrase?

- A. aggressive
- B. rudimentary
- C. evolving
- D. advantageous

Many archaeologists assume that large-scale engineering projects in ancient societies required an elite class to plan and direct the necessary labor. However, recent discoveries, such as the excavation of an ancient canal near the Gulf Coast of Alabama, have complicated this picture. Using radiocarbon dating, a team of researchers concluded that the 1.39-kilometer-long canal was most likely constructed between 576 and 650 CE by an Indigenous society that was relatively free of social classes.

Which choice best describes the overall structure of the text?

- A. It describes a common view among archaeologists, then discusses a recent finding that challenges that view.
- B. It outlines a method used in some archaeological fieldwork, then explains why an alternative method is superior to it.
- C. It presents contradictory conclusions drawn by archaeologists, then evaluates a study that has apparently resolved that contradiction.
- D. It identifies a gap in scientific research, then presents a strategy used by some archaeologists to remedy that gap.

Domesticated thousands of years ago by Indigenous people in South America, cacao, the plant from which chocolate is made, deviates structurally from the wild plant it is descended from. Maize (corn), another crop domesticated by Indigenous Americans, shows so little resemblance to any wild plant that genetic research was necessary to _____ blank teosinte grass as its ancestor.

Which choice completes the text with the most logical and precise word or phrase?

- A. acquire
- B. develop
- C. attract
- D. confirm

Today composer Scott Joplin is mainly celebrated for his catchy ragtime pieces “Maple Leaf Rag” and “The Entertainer.” However, by overlooking his less famous works, listeners will miss the full range of Joplin’s creativity. For instance, his waltz “Pleasant Moments” and his opera *Treemonisha* skillfully blend ragtime and classical music. These masterpieces deserve as much fame as Joplin’s biggest hits.

Which choice best states the main purpose of the text?

- A. To describe the similarities and differences between ragtime music and opera
- B. To argue that more attention should be given to Joplin’s lesser-known works
- C. To encourage music lovers to listen to music by many different composers
- D. To explain how Joplin learned to compose and perform ragtime music

Although science fiction was dominated mostly by white male authors when Octavia Butler, a Black woman, began writing, she did not view the genre as _____ blank: Butler broke into the field with the publication of several short stories and her 1976 novel *Patternmaster*, and she later became the first science fiction writer to win a prestigious MacArthur Fellowship.

Which choice completes the text with the most logical and precise word or phrase?

- A. legitimate
- B. impenetrable
- C. compelling
- D. indecipherable
