Q1**D**

D. Additionally,

Choice D is the best answer. “Additionally” logically signals that the painting analysis discussed in this sentence is an additional part of the botany research discussed in the previous sentence. That is, to research which fruits Umbrians grew in the past, the botanist analyzes old paintings in addition to looking at old lists of ingredients.

Choice A is incorrect because “in sum” illogically signals that the painting analysis discussed in this sentence is a concluding summary of the botany research discussed in the previous sentence. Instead, the painting analysis is an additional part of that research. Choice B is incorrect because “instead” illogically signals that the painting analysis discussed in this sentence is an alternative to the botany research discussed in the previous sentence. Rather, the painting analysis is an additional part of that research. Choice C is incorrect because “thus” illogically signals that the painting analysis discussed in this sentence is a result of the botany research discussed in the previous sentence. Instead, the painting analysis is an additional part of that research.

Q2**D**

D. In Kang’s portrait of her, Fung is seated on the floor, with five of her paintings resting against the wall behind her.

Choice D is the best answer. The sentence describes Fung’s location in Kang’s photograph, noting that Fung is seated on the floor. Additionally, because the sentence is intended for an audience already familiar with the artists, it omits the artists’ first names and other biographical information about them.

Choice A is incorrect. The sentence indicates that Fung appears in Kang’s photograph; it doesn’t describe Fung’s location in Kang’s photograph. Choice B is incorrect. The sentence identifies Kang and where she is based; it doesn’t describe Fung’s location in Kang’s photograph. Choice C is incorrect. The sentence describes the background of Kang’s photograph; it doesn’t describe Fung’s location in Kang’s photograph.

Q3

B

- B. Greenland's glaciers and icebergs both melt during the year, contributing to rising sea levels.
-

Choice B is the best answer. The sentence emphasizes a similarity between glaciers and icebergs in Greenland, noting that both melt and thereby contribute to rising sea levels.

Choice A is incorrect. The sentence provides information about the melting rate of icebergs in Greenland; it doesn't emphasize a similarity between glaciers and icebergs in Greenland. Choice C is incorrect. The sentence emphasizes a difference between glaciers and icebergs in Greenland, noting that their melting rates depend on different factors; it doesn't emphasize a similarity. Choice D is incorrect. The sentence explains the conditions under which glaciers in Greenland melt; it doesn't emphasize a similarity between glaciers and icebergs in Greenland.

Q4

C

- C. Each of the three sponges was inhabited by at least one male *A. fasciatus* and at least one female *A. fasciatus*.
-

Choice C is the best answer because it accurately describes data from the graph that support the claim that the team found that male and female *Atelomycterus fasciatus* (banded sand catsharks) share the same sponge. The graph presents the number of male, female, and undetermined banded sand catsharks found in each of three sponges—sponge 1, sponge 2, and sponge 3. The graph shows that approximately 17 male sharks and 13 female sharks were found in sponge 1, approximately 1 male shark and 2 female sharks were found in sponge 2, and approximately 2 male sharks and 1 female shark were found in sponge 3. Thus, the graph shows that male and female sharks were found sharing the same sponges.

Choice A is incorrect because the graph shows that one of the sponges (sponge 1) was *not* inhabited by any undetermined banded sand catsharks. Additionally, this choice doesn't give any information about female sharks, so it can't support the claim that male and female sharks are actually found in the same sponge. Choice B is incorrect because it doesn't give any information about female sharks. The graph does show that approximately 17 male banded sand catsharks inhabited sponge 1, but that information alone can't support the claim that male and female sharks are found in the same sponge. Choice D is incorrect because it doesn't give any information about male banded sand catsharks. The graph does show that approximately 13 female banded sand catsharks inhabited sponge 1, but that information alone can't support the claim that male and female sharks are found in the same sponge.

Q5

A

A. logging may be useful for maintaining healthy forests, provided it is limited.

Choice A is the best answer because it most logically completes the text's discussion of the potential effects of logging on forest conservation. The text begins by stating that logging practices are often thought of as being contrary to forest conservation efforts. Then, the text presents the results of a research study examining the effect of limited logging practices on specific forest plots, finding that the plots with limited logging may be "more robust" (healthier) than the plots that hadn't been logged at all. Given these results, it follows that logging may be a useful practice for maintaining healthy forests if it is practiced in a limited way.

Choice B is incorrect because the study referenced in the text only provides information on limited logging as a potential forest management strategy. There is no information in the text about how other forest management strategies support forest conservation efforts. Therefore, the text does not support the assertion that other forest management strategies are more successful than limited logging. Choice C is incorrect because the text presents a research study with findings that specific plots of forest with limited logging may be more robust than the forest plots that were not logged. Rather than suggesting that it is hard to know whether limited logging might be beneficial, the text suggests that the practice could be useful in forest conservation efforts. Choice D is incorrect. The text discusses the results of a research study that compares the health of forest plots with limited logging to forest plots that were not logged. It does not take a position on the best way to support forest health but rather presents a research study with findings that question conventionally held thoughts regarding the practice of logging.

Q6

B

- B. Barve found an association between habitat temperature and feather structure among Himalayan songbirds, lending new support to a general prediction.
-

Choice B is the best answer. The text describes how Barve found an association between habitat temperature and feather structure among Himalayan songbirds, which supports the general prediction that birds' feather structures vary with habitat temperature.

Choice A is incorrect. Barve's study isn't said to contradict previous predictions. In fact, the study supports the prediction described in the first sentence, which is that birds' feather structures vary with habitat temperature. Choice C is incorrect. Barve's study isn't said to "complicate an earlier hypothesis." In fact, the study supports the earlier prediction described in the first sentence, which is that birds' feather structures vary with habitat temperature. Choice D is incorrect. The text doesn't compare the importance of feather length and feather structure, and it doesn't say that Barve's study challenges any established beliefs. In fact, the study supports the prediction described in the first sentence, which is that birds' feather structures vary with habitat temperature.

Q7

C

- C. CE, making
-

Choice C is the best answer. The phrase "making...at the time" provides additional information about Cahokia that's not required for the sentence to make sense or function grammatically. As a nonessential supplement, this phrase should be separated from the rest of the sentence with a comma.

Choice A is incorrect. This choice results in a run-on sentence. The nonessential descriptive aside "making...at the time" needs to be separated from the rest of the sentence with a comma. Choice B is incorrect. This choice results in a sentence fragment. "Making...at the time" doesn't have a subject and can't stand on its own as a sentence. Thus, it can't be separated from the rest of the sentence with a period. Choice D is incorrect. This choice results in a punctuation error. "Making...at the time" doesn't have a subject and can't stand on its own as an independent clause. Since a semicolon can only link two independent clauses, using one here creates an error.

Q8

C

C. falsework,

Choice C is the best answer. The convention being tested is the use of punctuation within a sentence. The comma after "falsework" pairs with the comma after "supports" to separate the supplementary element "a construction system known as falsework" from the rest of the sentence. This supplementary element functions to clarify the term "these temporary supports," and the pair of commas indicates that this element could be removed without affecting the grammatical coherence of the sentence.

Choice A is incorrect because a semicolon can't be paired with a comma in this way to separate the supplementary element from the rest of the sentence. Choice B is incorrect because it fails to use appropriate punctuation to separate the supplemental element from the rest of the sentence. Choice D is incorrect because a colon can't be paired with a comma in this way to separate the supplementary element from the rest of the sentence.

Q9

D

D. The speaker describes attempts to control nature and then offers a reminder that not all nature is controllable.

Choice D is the best answer. This best describes the overall structure of the text. In the first half of the text, the speaker describes our attempts to control nature: cultivating, taming, and irrigating different kinds of land. In the second half, the speaker states that we can never tame the sea or the beach.

Choice A is incorrect. This doesn't describe the overall structure of the text. The speaker never argues that we should not interfere with nature. Rather, the speaker says that we are able to tame many different kinds of land, but we are unable to tame the sea or beaches. Choice B is incorrect. This doesn't describe the overall structure of the text. The speaker never describes our cultivation, taming, and irrigation of land as "temporary." Rather, the speaker says that we are able to tame many different kinds of land, but we are unable to tame the sea or beaches. Choice C is incorrect. This doesn't describe the overall structure of the text. The speaker never describes our cultivation, taming, and irrigation of land as an "admirable" approach to nature." Rather, the speaker says that we are able to tame many different kinds of land, but we are unable to tame the sea or beaches.

Q10

A

- A. It summarizes research findings on Matabele ants and then identifies an area for further research.
-

Choice A is the best answer because it most accurately describes the overall structure of the text. The text first presents what researchers found from studying Matabele ants: the ants can tell when colony members have infected wounds and can largely successfully treat those infections with their antimicrobial secretions. The text then indicates that the findings about the ants could help with the future development of antibiotics for humans. Thus, the text summarizes research findings and then identifies an area for further research.

Choice B is incorrect. Although the text introduces a study about Matabele ants, it never discusses how the researchers did their work or any methods they used to produce their findings. Choice C is incorrect. Although the text does describe properties of Matabele ants—their ability to detect and largely successfully treat infected wounds in colony members—it never addresses evolution or how these properties might have changed. Choice D is incorrect because the text doesn't present anything about Matabele ants as an issue or problem to be solved. Instead, it discusses beneficial abilities the ants have (detecting and treating infected wounds) and suggests that understanding those abilities might be useful for human medicine.

Notes

Accept equivalent forms (e.g. $0.25 \equiv 1/4$). For grid-in items, decimal and fraction answers are both valid.
