Q1

GRID-IN ALGEBRA

The equation $7g + 7b = 840$ represents the number of blue tiles, b , and the number of green tiles, g , an artist needs for an 840-square-inch tile project. The artist needs 71 blue tiles for the project. How many green tiles does he need?

Write the answer above. Fill the matching bubble for each digit, plus the fraction bar or decimal point if needed.

Line k is defined by $y = 7x + \frac{1}{8}$. Line j is perpendicular to line k in the xy -plane. What is the slope of line j ?

A. -8

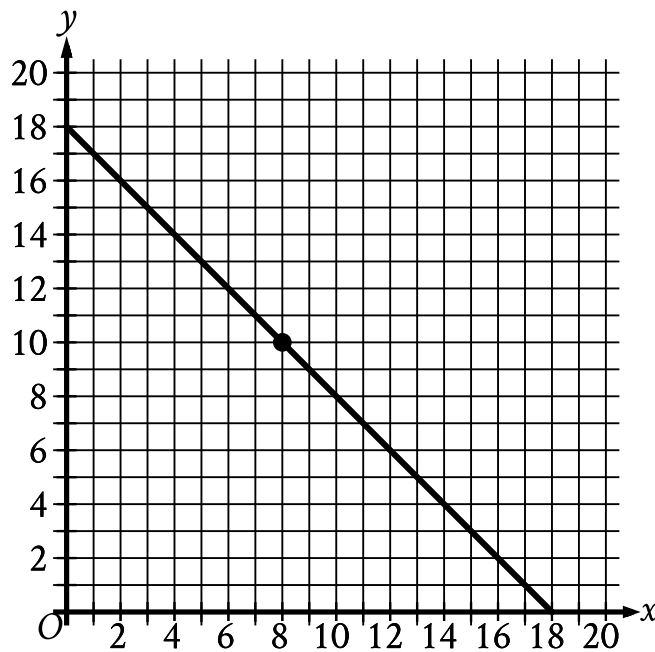

B. $-\frac{1}{7}$

C. $\frac{1}{8}$

D. 7

If the graph of $27x + 33y = 297$ is shifted down 5 units in the xy -plane, what is the y -intercept of the resulting graph?

- A. 0,4
- B. 0,6
- C. 0,14
- D. 0,28

- The line slants gradually down from left to right.
- The line passes through the following points:
 - (8 comma 10)
 - (9 comma 9)

The graph in the xy -plane models the possible combinations of length x , in meters (m), and width y , in meters, for a rectangle with a perimeter of 36 m. Which statement is the best interpretation of the point 8, 10 in this context?

- A. The length is 10 m less than the perimeter, and the width is 8 m less than the perimeter.
- B. The length is 10 m, and the width is 8 m.
- C. The length is 8 m, and the width is 10 m.

- D. The length is 8 m less than the perimeter, and the width is 10 m less than the perimeter.

On a 210-mile trip, Cameron drove at an average speed of 60 miles per hour for the first x hours. He then completed the trip, driving at an average speed of 50 miles per hour for the remaining y hours. If $x = 1$, what is the value of y ?

Write the answer above. Fill the matching bubble for each digit, plus the fraction bar or decimal point if needed.

Q6

GRID-IN ALGEBRA

What is the slope of the graph of $y = \frac{1}{4}27x + 15 + 7x$ in the xy -plane?

Write the answer above. Fill the matching bubble for each digit, plus the fraction bar or decimal point if needed.

Line t in the xy -plane has a slope of $-\frac{1}{3}$ and passes through the point $9, 10$. Which equation defines line t ?

A. $y = 13x - \frac{1}{3}$

B. $y = 9x + 10$

C. $y = -\frac{x}{3} + 10$

D. $y = -\frac{x}{3} + 13$

A store sells two different-sized containers of blueberries. The store's sales of these blueberries totaled 896.86 dollars last month. The equation $4.51x + 6.07y = 896.86$ represents this situation, where x is the number of smaller containers sold and y is the number of larger containers sold. According to the equation, what is the price, in dollars, of each smaller container?

Write the answer above. Fill the matching bubble for each digit, plus the fraction bar or decimal point if needed.

x	1	2	3
y	11	16	21

The table shows three values of x and their corresponding values of y . Which equation represents the linear relationship between x and y ?

- A. $y = 5x + 6$
- B. $y = 5x + 11$
- C. $y = 6x + 5$
- D. $y = 6x + 11$
