10 answers · Rationale-rich · Teach from doc

Q1**B**

B. Soto would see in her neighborhood.

Choice B is the best answer. The convention being tested is end-of-sentence punctuation. This choice correctly uses a period to punctuate a declarative sentence ("For example...neighborhood").

Choice A is incorrect. It's unconventional to use a question mark in this way to punctuate a declarative sentence. Choice C is incorrect. The structure requires a declarative clause at the end of the sentence that states where Soto saw the steel panels, not an incomplete interrogative clause that asks a direct question, such as "would Soto see in her neighborhood." Choice D is incorrect. The structure requires a period and a declarative clause at the end of the sentence that states where Soto saw the steel panels, not an incomplete interrogative clause asking a direct question, such as "would Soto see in her neighborhood?"

Q2**A**

A. configurations. TMAO

Choice A is the best answer. The convention being tested is punctuation use between sentences. In this choice, the period after "configurations" is used correctly to mark the boundary between one sentence ("The intense...configurations") and another ("TMAO...fish"). The supplementary phrase ("ensuring...configurations") modifies the main clause of the first sentence ("The chemical...effect"), and "TMAO" is the subject of the second sentence.

Choice B is incorrect because it results in a run-on sentence. The sentences ("The intense... configurations" and "TMAO...fish") are fused without punctuation and/or a conjunction. Choice C is incorrect because it results in a comma splice. A comma can't be used in this way to mark the boundary between sentences. Choice D is incorrect. Without a comma preceding it, the conjunction "and" can't be used in this way to join sentences.

Q3

D

D. fibers, but

Choice D is the best answer. The convention being tested is the coordination of main clauses within a sentence. This choice correctly uses a comma and the coordinating conjunction “but” to join the first main clause (“Human-made...fibers”) and the second main clause (“the manufacture...water”).

Choice A is incorrect because it results in a comma splice. Without a conjunction following it, a comma can’t be used in this way to join two main clauses. Choice B is incorrect because when coordinating two longer main clauses such as these, it’s conventional to use a comma before the coordinating conjunction. Choice C is incorrect because it results in a run-on sentence. The two main clauses are fused without punctuation and/or a conjunction.

Q4

B

B. time, but

Choice B is the best answer. The convention being tested is the coordination of main clauses within a sentence. This choice correctly uses a comma and the coordinating conjunction "but" to join the first main clause ("Scientists...time") and the second main clause ("the Lund...otherwise").

Choice A is incorrect because when coordinating two longer main clauses such as these, it’s conventional to use a comma before the coordinating conjunction. Choice C is incorrect because it results in a comma splice. Without a conjunction following it, a comma can’t be used in this way to join two main clauses. Choice D is incorrect because it results in a run-on sentence. The two main clauses are fused without punctuation and/or a conjunction.

Q5

C

C. advance;

Choice C is the best answer. The clause “A subseasonal...advance” and the clause “its predictions...forecast” are both independent clauses, so using a semicolon to separate them is grammatically correct.

Choice A is incorrect. This choice creates a run-on sentence error. The clause “A subseasonal...advance” and the clause “its predictions...forecast” are both independent clauses, so a comma is not enough to separate them. Choice B is incorrect. This choice creates a run-on sentence error. The clause “A subseasonal...advance” and the clause “its predictions...forecast” are both independent clauses, so they need to be separated with specific punctuation (a period, a semicolon, a colon, a dash, or a comma + a coordinating conjunction). Choice D is incorrect. This choice creates a run-on sentence error. The clause “A subseasonal...advance” and the clause “its predictions...forecast” are both independent clauses, so the word “and” by itself is not enough to separate them. There would need to be a comma before “and” for this choice to work.

Q6

D

D. will Umuofia’s traditions be affected?

Choice D is the best answer. The clause before the colon tells us that the novel “asks a question,” so the clause after the colon should be in the conventional form of a question: with the verb before the subject, and a question mark at the end.

Choice A is incorrect. This choice ends the sentence with a period, which isn’t right. The clause before the colon tells us that the novel “asks a question,” so the clause after the colon should be that question. Choice B is incorrect. This choice ends the sentence with a period, which isn’t right. The clause before the colon tells us that the novel “asks a question,” so the clause after the colon should be that question. In Standard English, questions place the verb before the subject and end with a question mark. Choice C is incorrect. This choice doesn’t conform to the conventions of Standard English. In Standard English, questions place the verb before the subject.

Q7

B

B. asteroids, several

Choice B is the best answer. This choice uses a comma to correctly separate the dependent clause "although...asteroids" from the independent clause "several hundred have been...Mars."

Choice A is incorrect. This choice results in a sentence fragment. "Although...asteroids" is a dependent clause. It can't stand on its own as a sentence, which means it can't end in a period.

Choice C is incorrect. This choice results in a punctuation error. "Although...asteroids" is a dependent clause and can't be joined to the independent clause "several hundred have been...Mars" with a semicolon. A semicolon can only join two independent clauses. Choice D is incorrect. This choice creates a punctuation error. A colon can only come after an independent clause, but "although...asteroids" is a dependent clause.

Q8

C

C. not, aerobic

Choice C is the best answer. A comma is the appropriate way to link the dependent clause "While...not" and the independent clause that follows.

Choice A is incorrect. This choice creates a run-on sentence error. "While...not" is a dependent clause, which must be separated from the independent clause that follows with some sort of punctuation. Choice B is incorrect. This choice creates a sentence fragment. "While one requires oxygen and one does not" isn't an independent clause, so it can't stand alone as a complete sentence. Choice D is incorrect. This choice creates a punctuation error. "While one requires oxygen and one does not" isn't an independent clause, so it can't be linked to the clause that follows with a semicolon.

Q9**C**

C. do they affect our weather?

Choice C is the best answer. The convention being tested is end-of-sentence punctuation. This choice correctly uses a question mark to punctuate the coordinated interrogative clauses "What are atmospheric rivers" and "how do they affect our weather," both of which ask direct questions.

Choice A is incorrect because a period can't be used in this way to punctuate an interrogative clause, such as "how do they affect our weather," at the end of a sentence. Choice B is incorrect because the structure requires an interrogative clause and a question mark at the end of the sentence. Choice D is incorrect because the structure requires an interrogative clause at the end of the sentence.

Q10**D**

D. could the blueberries thrive?

Choice D is the best answer. The convention being tested is end-of-sentence punctuation. This choice correctly uses a question mark to punctuate the interrogative clause "could the blueberries thrive," which asks a direct question at the end of the sentence.

Choice A is incorrect because a period can't be used in this way to punctuate an interrogative clause, such as "could the blueberries thrive," at the end of a sentence. Choice B is incorrect because the context requires an interrogative clause. The declarative clause "the blueberries could thrive" incorrectly indicates that it was known that the blueberries could thrive in alkaline soil, whereas Michel had yet to find this out. Choice C is incorrect because a question mark can't be used in this way to punctuate a declarative clause, such as "the blueberries could thrive," at the end of a sentence.

Notes

Accept equivalent forms (e.g. $0.25 \equiv 1/4$). For grid-in items, decimal and fraction answers are both valid.
