Q1**C**

C. 32.4 square miles.

Choice C is the best answer because it most effectively uses data from the table to complete the comparison between Pueblo tribal nations. The student identifies that the total area of Taos Pueblo is 156.2 square miles and needs to complete the comparison with the total area of Nambé Pueblo. According to the table, Nambé Pueblo has a total area of 32.4 square miles.

Choice A is incorrect because according to the table, 47.3 square miles is the area of Pueblo de San Ildefonso, not of Nambé Pueblo. Choice B is incorrect because according to the table, 77.1 square miles is the area of Santa Clara Pueblo, not of Nambé Pueblo. Choice D is incorrect because according to the table, 595.7 square miles is the area of Pueblo of Acoma, not of Nambé Pueblo.

Q2

C

C. Researchers discover that earthworms from surface soils are a major part of olms' diet.

Choice C is the best answer because it presents a finding that, if true, would most strongly support Manenti and team's claim that olms regularly come to the surface to find food. The text explains that scientists previously believed olms remained in their underwater caves throughout their lives, but Manenti's team claims that olms actually surface regularly to perform important activities like finding food. Since earthworms from surface soils would not be present in underwater caves, the finding that such earthworms constitute a major part of olms' diet would provide compelling evidence that olms regularly leave their underwater cave environment to obtain food from the surface, thus supporting the underlined claim.

Choice A is incorrect because information about olms' breeding frequency wouldn't support the claim about their leaving their underwater habitats to obtain food. While breeding patterns might be relevant to understanding olm behavior in general, this finding doesn't address whether olms surface to find food, which is the specific behavior that the underlined claim addresses. Choice B is incorrect because learning that olms live in only a few cave systems wouldn't support the claim about their regular visits to the surface. This finding would provide information about the geographic distribution of olm habitats but wouldn't address whether olms leave these caves to find food or perform other activities on the surface. Choice D is incorrect because the differences between olms' brains and other salamanders' brains have no clear connection to olms' movement beyond their underwater habitats or to their feeding habits. A finding about the uniqueness of olms' brains wouldn't address whether olms leave their caves to find food or support Manenti and team's claim about olms' motivation for coming to the surface.

Q3

C

- C. “Kelly’s grandmother, who would repair clothing when he was a child, frequently added mismatched buttons to the clothes to draw attention away from any flaws in the garments.”
-

Choice C is the best answer. This quotation draws a direct connection between the use of buttons and Kelly’s stylish female relatives.

Choice A is incorrect. This choice mentions Kelly’s use of buttons, but it doesn’t connect that design choice to the influence of women in Kelly’s family. Choice B is incorrect. This choice discusses how other designers were inspired by Kelly, which doesn’t provide evidence that Kelly was inspired by his family. Choice D is incorrect. While this choice does refer to fashionable women in Kelly’s family, it doesn’t connect their influence to Kelly’s use of buttons.

Q4

C

- C. 40 meters tall.
-

Choice C is the best answer because it most effectively uses data from the table to complete the text about the el Castillo pyramid. The table presents information for the location, height, and age of four pyramids, and the task is to use the data from the table to complete the text by choosing the correct height for el Castillo, which the table shows is 40 meters.

Choice A is incorrect because, according to the table, el Castillo is 40 meters tall, not 33 meters, which is the height of the Great Pyramid in Mexico. Choice B is incorrect because, according to the table, el Castillo is 40 meters tall, not 47 meters, which is the height of the Pyramid of Sahure in Egypt. Choice D is incorrect because, according to the table, el Castillo is 40 meters tall, not 60 meters, which is the height of the Pyramid of Djoser in Egypt.

Q5

A

- A. “She had never known before how much the country meant to her. The chirping of the insects down in the long grass had been like the sweetest music. She had felt as if her heart were hiding down there, somewhere, with the quail and the plover and all the little wild things that crooned or buzzed in the sun. Under the long shaggy ridges, she felt the future stirring.”
-

Choice A is the best answer because it presents the quotation that most directly illustrates the claim that Cather portrays Alexandra as having a deep emotional connection to her natural surroundings. This quotation states that the country meant a great deal to Alexandra and then goes on to detail several ways in which her natural surroundings affect her emotionally: the insects sound like “the sweetest music,” she feels as though “her heart were hiding” in the grass “with the quail and the plover,” and near the ridges she feels “the future stirring.”

Choice B is incorrect because the quotation doesn’t suggest that Alexandra had a deep emotional connection to her natural surroundings but instead describes how she interacts with the people around her to learn more about crops, poultry, and experiments with clover hay. Choice C is incorrect because the quotation doesn’t suggest that Alexandra has a deep emotional connection to her natural surroundings but instead describes her nighttime departure in a wagon. The quotation says nothing about Alexandra’s emotional state. Choice D is incorrect because the quotation doesn’t convey Alexandra’s deep emotional connection to her natural surroundings; instead, this quotation describes how well she understands the markets and livestock.

Q6

A

A. “After I came out of the haunted house, I felt very accomplished and less stressed.”

Choice A is the best answer. This choice illustrates both “feeling frightened in controlled situations” (the haunted house) and the benefit of a boosted mood (“less stressed”) and confidence (“very accomplished”).

Choice B is incorrect. This choice isn’t the best illustration of the claim. While laughing may indicate a good mood, this choice provides no evidence of “feeling frightened” or boosted confidence. Another choice provides better evidence. Choice C is incorrect. This choice isn’t the best illustration of the claim. This choice demonstrates “feeling frightened” in a controlled environment, but it doesn’t provide strong evidence of boosted mood or confidence. Another choice provides better evidence. Choice D is incorrect. This choice isn’t the best illustration of the claim. While a “sense of relief” could be interpreted as a boosted mood, this choice doesn’t provide direct evidence of “feeling frightened” or of increased confidence. This choice simply suggests that haunted houses and scary movies have a similar effect. Another choice provides better evidence for the researcher’s claim.

Q7

C

C. “*Yao Drum* was inspired by a ceremonial dance Dai witnessed during her time performing field research among the Yao people in the province of Guizhou in 1941 or 1942.”

Choice C is the best answer. This choice clearly states that *Yao Drum* was inspired by a ceremonial dance of the Yao people. This directly supports the curator’s claim that some of Dai’s pieces “represent the dances of local communities” she visited.

Choice A is incorrect. This choice discusses the sound and music in *Yao Drum*, but it doesn’t connect these elements to “the dances of local communities,” which is the focus of the claim. Choice B is incorrect. This choice doesn’t mention the dances of local communities, but instead discusses how *Yao Drum* is different from some of Dai’s earlier works. Choice D is incorrect. This choice describes the choreography of *Yao Drum*, but it doesn’t connect these elements to “the dances of local communities,” which is the focus of the claim.

Q8

B

- B. a listening child “knows that Aunt Sue / Never got her stories out of any book at all, / But that they came / Right out of her own life.”
-

Choice B is the best answer because it most effectively illustrates the speaker of the poem’s claim that the stories Aunt Sue tells are based on Aunt Sue’s personal experiences. In the quotation, the speaker conveys the listening child’s point of view that Aunt Sue’s stories originate from her personal experiences and are not taken from books or other external sources. The listening child explicitly contrasts two possible sources for Aunt Sue’s stories: a book (whose potentially fictitious stories are implied to be written by someone else) or “her own life.” By having the child confidently assert that Aunt Sue “never got her stories out of any book at all,” the speaker indicates that Aunt Sue’s stories are instead informed by her lived experiences.

Choice A is incorrect because it describes an element or image that recurs within Aunt Sue’s stories rather than indicating that these stories have a real-life basis. The reference to dark shadows that “cross and recross” the stories functions as imagery on a literal, visual level and may also evoke figurative darkness, but this detail by itself doesn’t suggest that the stories are based on Aunt Sue’s personal experiences. Choice C is incorrect because it identifies the setting of Aunt Sue’s storytelling rather than describing the real-life basis of the stories themselves. The quotation states that Aunt Sue tells her stories on “summer nights on the front porch,” which establishes when and where the storytelling occurs; however, no information is provided about the origins of the stories that Aunt Sue tells within this setting. Choice D is incorrect because it describes the movement or circulation of characters in the stories as Aunt Sue speaks rather than establishing that these stories have a real-life basis. The quotation primarily evokes the sounds of Aunt Sue’s voice and the seemingly easy “flow” of this voice in her storytelling. Although the characters who “mingle...in the flow of old Aunt Sue’s voice” are to some extent created or animated by her voice, no information is provided about the characters themselves or their relationship to Aunt Sue’s actual experiences.

Q9

D

- D. More of the drawings had an example of a mammal than either an example of a bird or an example of an insect.
-

Choice D is the best answer because it accurately describes data from the graph that support the researchers' conclusion that children may be more aware of mammals than of other animals. The graph presents the percent of drawings by schoolchildren that contained an example of an animal from a certain group (mammals, birds, or insects). The graph shows that approximately 80% of the drawings contained an example of a mammal, while only approximately 69% contained an example of a bird and only about 55% contained an example of an insect. The fact that mammals were included in more drawings than either birds or insects were supports the idea that children may be particularly aware of mammals in their environments.

Choice A is incorrect because the graph shows that there were not "about as many" drawings with insects as there were drawings with birds (approximately 69% of the drawings included an example of a bird, while only about 55% included an example of an insect). Further, comparing only the numbers for birds and insects wouldn't indicate anything about the schoolchildren's awareness of mammals. Choice B is incorrect because the graph shows that insects, not birds, were the group that appeared in the fewest number of drawings (approximately 69% of the drawings included an example of a bird but only about 55% included an example of an insect). Further, stating that examples from one nonmammal group appeared in the fewest number of drawings would provide no evidence about the schoolchildren's awareness of mammals. Choice C is incorrect because the graph shows that more drawings had an example of a mammal than an example of an insect, not the other way around (approximately 80% of the drawings included an example of a mammal, while only about 55% included an example of an insect). Further, examples of a nonmammal group appearing in more drawings than examples of mammals did would actually weaken the claim that schoolchildren may be more aware of mammals than of other animals.

Q10

C

C. red maple.

Choice C is the best answer because it most effectively uses data from the table to complete the statement about the forestry student's project. The table shows five types of maple trees, each tree's maximum height, and whether each tree is native to North America. The text indicates that the student needs to recommend a maple tree that's native to North America and won't reach a height greater than 60 feet. The red maple is the only tree listed in the table that meets these criteria: its maximum height is 60 feet—meaning that it won't grow higher than 60 feet—and it's native to North America.

Choice A is incorrect because the text states that the student needs to recommend a tree that's native to North America and won't grow higher than 60 feet, but the table shows that the maximum height of the silver maple is 70 feet. Choice B is incorrect because the text states that the student needs to recommend a tree that's native to North America and won't grow higher than 60 feet, but the table shows that the maximum height of the sugar maple is 75 feet. Choice D is incorrect because the text states that the student needs to recommend a tree that's native to North America and won't grow higher than 60 feet, but the table shows that the Norway maple isn't native to North America.

Notes

Accept equivalent forms (e.g. $0.25 \equiv 1/4$). For grid-in items, decimal and fraction answers are both valid.
