Q1**D****D. exploited**

Choice D is the best answer because it most logically completes the text's discussion of using magnetism to detect stress in buried metal pipes. In this context, "exploited" means made productive use of. The text indicates that the magnetic fields of some metals change under stress and that Saleem and colleagues showed that it is possible to measure those changes from a distance, thereby demonstrating that the integrity of underground metal pipes can be evaluated without having to unearth them. This context thus indicates that Saleem and colleagues made productive use of, or exploited, this tendency of the metals' magnetic fields.

Choice A is incorrect because in this context, "hypothesized" would mean made a tentative assumption to be evaluated in a study or experiment. Although Saleem and colleagues may have had one or more hypotheses for these experiments, the text presents the information about the tendency of some metals' magnetic fields to change under stress as a known fact that the researchers made productive use of, not as a hypothesis to be evaluated. The text after the colon indicates that the researchers were not evaluating whether such changes occur but whether those changes can be measured at a distance. Choice B is incorrect because in this context, "discounted" would mean downplayed or ignored, but the text does not suggest that Saleem and colleagues minimized or ignored the tendency of the magnetic fields of some metals to change under stress. Rather, the text indicates that this tendency is the basis for Saleem and colleagues' method of assessing the pipes' integrity. Choice C is incorrect because nothing in the text indicates that Saleem and colleagues "redefined," or reevaluated or reformulated, the tendency of some metals' magnetic fields to change under stress. Instead, the text indicates that the researchers made use of that tendency to demonstrate that it is possible to evaluate the integrity of underground pipes without unearthing them.

Q2

C

C. commonalities with

Choice C is the best answer because it most logically completes the text’s discussion of architectural influences among Mesoamerican cities. In this context, “commonalities with” means similarities to or shared attributes with. The text indicates that a recently discovered citadel in Tikal includes a close imitation of a famous temple in Teotihuacán (another Mesoamerican city) and other evidence of Teotihuacán influence, which suggests that the citadel possesses features that resemble architectural features found in Teotihuacán. This context thus indicates that the Tikal citadel shows commonalities with Teotihuacán architecture.

Choice A is incorrect because there’s nothing in the text that suggests that the Tikal citadel shows “refinements of,” or improvements on, Teotihuacán architecture. Although the text suggests that the architecture of Teotihuacán influenced the architecture of the Tikal citadel, and although it’s possible that later architectural designs could make improvements on earlier designs, the text doesn’t discuss whether, in imitating Teotihuacán architecture, the Tikal citadel’s builders improved on it. Choice B is incorrect because describing the citadel in Tikal as showing “precursors of” Teotihuacán architecture—or features that preceded and foreshadowed those of Teotihuacán architecture—would imply the opposite of what the text suggests about the relationship between the architecture found in Tikal and Teotihuacán. The text claims that the discovery of similarities between the Tikal citadel and the architecture of Teotihuacán, including a replica of a temple in Teotihuacán, provides evidence of outside influences on Tikal architecture. If the Tikal citadel was influenced by Teotihuacán architecture, then the Teotihuacán architecture must predate the citadel, not the other way around. In this context, therefore, it wouldn’t make sense to say that the Tikal citadel shows precursors of Teotihuacán architecture. Choice D is incorrect because the text discusses how the citadel in Tikal indicates the influence of Teotihuacán architecture, which implies that the makers of the Tikal citadel likely admired aspects of Teotihuacán architecture enough to imitate it. Thus, there’s no reason to think that the Tikal citadel provides evidence of the Tikal people’s “animosities toward,” or feelings of strong dislike or hostility toward, Teotihuacán architecture.

Q3

B

B. tenuous

Choice B is the best answer because it most logically completes the text’s discussion of the author’s claim about the relationship between Neanderthals and *Homo sapiens*. As used in this context, “tenuous” means lacking substance. The end of the first sentence states that the author’s claim didn’t consider certain key pieces of evidence—“recent archaeological discoveries”—and is therefore weak.

Choice A is incorrect because it wouldn’t make sense in context to refer to the author’s claim as “disorienting,” or confusing. The text suggests that the author’s claim is insubstantial, not that it’s difficult to grasp. Choice C is incorrect because referring to the claim as “nuanced,” or subtle, wouldn’t make sense in context. According to the text, the claim is incomplete because it didn’t consider certain key information about recent archaeological finds; it doesn’t suggest that what’s in the claim lacks precision. Choice D is incorrect because saying that the claim is “unoriginal,” or imitative, wouldn’t make sense in context. The text faults the claim because it doesn’t consider certain key information about recent archaeological finds; it doesn’t suggest that the author’s claim lacks originality.

Q4

B

B. mediated by

Choice B is the best answer because it most logically completes the text's discussion of residential mobility decisions. In this context, "mediated by" means influenced or affected by something. The text establishes that increasing household spending power (an economic factor) produced "mixed effects" on mobility decisions. The text then explains that residential choices are "not fully reducible to economic factors," which means that these decisions don't simply rely on how much money is available to spend on a residential move but on other factors as well. According to the text, noneconomic considerations, such as access to social networks, also play a significant role. Thus, "mediated by" accurately captures this relationship where noneconomic factors influence what might otherwise be purely economic decisions.

Choice A is incorrect because "transposed with" would suggest that economic and noneconomic factors are being switched or interchanged when making residential mobility decisions, which wouldn't make logical sense in this context. The text indicates that these factors coexist and jointly influence such decisions. Choice C is incorrect. The phrase "decoupled from" means separated or disconnected from, which would suggest that economic factors are completely separate from noneconomic factors. This would contradict the text's main point that residential mobility decisions involve multiple factors being considered simultaneously rather than in isolation. Choice D is incorrect because "antecedent to," which means something prior or earlier, would indicate that noneconomic factors come before economic ones in time or sequence. The text doesn't establish this chronological relationship. Instead, the text indicates that economic factors (household spending power) and noneconomic factors (access to social networks) simultaneously influence residential mobility decisions.

Q5

B

B. a straightforward

Choice B is the best answer because it most logically completes the text’s description of efforts to explain the existence of planets in binary star systems. As used in this context, describing an explanation as “a straightforward” one would mean that the explanation is direct and uncomplicated. The text asserts that since it should be “nearly impossible” for planets to form in binary star systems, it’s “not surprising” that there isn’t a straightforward explanation for the existence of planets in such systems; the fact that one potential approach involves “complex” factors offers further contextual support for this idea.

Choice A is incorrect because it would not make sense in context to say that there isn’t “a discernible” explanation—meaning an explanation capable of being perceived—for the existence of planets in binary star systems. The text discusses just such an explanation offered by Roman Rafikov and Kedron Silsbee, which indicates that their explanation can be discerned. Choice C is incorrect because the text emphasizes how difficult it is to explain the existence of planets in binary star systems, suggesting that the situation isn’t marked by the lack of “an inconclusive” explanation—an explanation that does not resolve the issue—but rather that if any explanations have been offered, they’ve likely been inconclusive ones. Choice D is incorrect because nothing in the text suggests that there is a lack of “an unbiased,” or impartial and unprejudiced, explanation for the existence of planets in binary star systems. The text indicates that it’s difficult to explain the existence of planets in such systems and it describes one attempt to do so, but there is no evidence that explanations from Roman Rafikov and Kedron Silsbee or others are biased.

Q6

C

C. independent of

Choice C is the best answer. We're told that charities that pay donors back for nuisance costs will attract a few large donors instead of many small donors. This suggests that nuisance costs are not linked to donation size.

Choice A is incorrect. This doesn't fit the logic of the text. If nuisance costs are supplemental to (meaning in addition to) donation size, that wouldn't result in charities that compensate donors for those costs attracting a few large donors over many small donors. Choice B is incorrect. This doesn't fit the logic of the text. If nuisance costs can predict donation size, that wouldn't necessarily result in charities that compensate donors for those costs attracting a few large donors over many small donors. Choice D is incorrect. This doesn't fit the logic of the text. If nuisance costs are subsumed in (meaning included in) donation size, that wouldn't result in charities that compensate donors for those costs attracting a few large donors over many small donors.

Q7

C

C. ambiguity

Choice C is the best answer because it most logically completes the text's discussion of Gabriela González and team's detection of gravitational waves. In this context, "ambiguity" means uncertainty or doubtfulness. The text explains that although skeptics had thought that direct evidence of gravitational waves would be too faint to be detected, researchers led by González claimed that a chirping sound captured by Laser Interferometer Gravitational-Wave Observatory antennas nevertheless provided such evidence. The text goes on to say that detailed statistical analysis confirmed the observation of gravitational waves with a high degree of confidence—that is, with near certainty—a finding that helped to preclude, or rule out, any claims that the signal's attribution to gravitational waves might be ambiguous or doubtful.

Choice A is incorrect. In this context, "inconspicuousness" would mean the quality of being unnoticeable or difficult to detect. Although the text indicates that skeptics had doubted whether gravitational waves could be observed directly because of their presumed faintness (which suggests that gravitational waves were expected to be difficult to detect), the blank portion of the text isn't referring to the possibility that gravitational waves are unnoticeable or undetectable. Instead, the focus of the last sentence is González's team's observation of a chirping sound that they attributed to gravitational waves, and it wouldn't make sense to say that through statistical analysis, they ruled out the possibility that the sound they observed was undetectable. Rather, the skeptical view presented in the text suggests that there could be some ambiguity about the source of the chirping, but statistical analysis virtually eliminated this uncertainty. Choice B is incorrect because in this context, "discretion" would mean good judgment, and it wouldn't make sense to say that an event, such as the detection of gravitational waves, would show judgment, much less that the event's capacity to exercise good judgment would be precluded by statistical analysis confirming its attribution. Choice D is incorrect because in this context, "probability" would mean likelihood, and the text states that statistical analysis, which confirmed the signal with a high degree of confidence, suggests the likelihood that the chirping sound was produced by gravitational waves, not that the analysis helped to preclude this likelihood.

Q8

B

B. optimize

Choice B is the best answer because it most logically completes the text's discussion of business marketing practices. In this context, "optimize" means make the most effective possible use of available opportunities. The text indicates that though businesses typically try to promote themselves, they don't always make use of effective tools for doing so, pointing to research showing that 33 percent of restaurants failed to use a free listing service that increased revenue by 5 percent on average for restaurants that did use the service. The text therefore suggests that by foregoing a free and effective marketing tool, some businesses aren't making the best use of, or optimizing, marketing opportunities.

Choice A is incorrect because in this context, "adorn" would mean decorate or enhance the appearance of, and there's nothing in the text to suggest that by failing to use a free and effective promotional tool, some businesses aren't enhancing the appearance of their own marketing. The example in the text illustrates that some businesses aren't utilizing an effective marketing opportunity, not that they aren't improving the appearance of their marketing. Choice C is incorrect because in this context, "endorse" would mean openly approve or recommend, and the text's discussion of the fact that some businesses have overlooked an effective marketing tool doesn't support the idea that those businesses therefore don't approve of their own marketing. Choice D is incorrect because in this context, saying that businesses don't "counteract" their marketing would suggest that they don't actively undermine it or make it ineffective. The text begins by stating that businesses typically try to promote themselves but then continues to imply that some businesses fail to take advantage of good opportunities to do so, citing the example of businesses that failed to use a free and effective marketing tool. Though it's possible that those businesses that did use the site therefore didn't unintentionally counteract their own marketing, the first sentence conveys that the text's focus is on things that some businesses do and that some businesses don't do when trying to promote themselves, and it wouldn't make sense to say that any businesses would actively try to undermine their own marketing in pursuit of that goal.

Q9

D

D. notional

Choice D is the best answer because it most logically completes the text's discussion of Theia and the origin of the Moon. In this context, "notional" means theoretical or only an idea. The text indicates that although something was once true of Theia, the protoplanet one theory holds collided with Earth and created debris that became the Moon, researchers now claim to have identified pieces of it deep in Earth's mantle. In other words, having direct evidence of Theia is a new development. This context suggests that before evidence was found, Theia was only theoretical—that is, that it was notional.

Choice A is incorrect because the text doesn't suggest that Theia, a protoplanet, was "desultory," which in this context would mean moving away from the matter at hand; indeed, the text focuses on the "big whack" theory of the origin of the Moon and indicates that Theia is a central part of that theory. Choice B is incorrect because the text makes the point that something was true of Theia until recently and suggests that this has changed now that researchers believe they have found pieces of the protoplanet deep in Earth's mantle. It wouldn't make sense to say that Theia was actually "spurious," or false, until researchers found direct evidence of the protoplanet. (Although Theia's existence might not have been certain, it would not have been false simply because there was no evidence of it.) Choice C is incorrect because the text makes the point that something was true of Theia until recently and suggests that this has changed now that researchers believe they have found pieces of the protoplanet deep in Earth's mantle. It wouldn't make sense to say that Theia was "veritable," or real, before researchers found direct evidence of its existence: the evidence would instead confirm that Theia was real.

Q10

D

D. variable

Choice D is the best answer because it most logically completes the text’s discussion of the sounds made by güiros. In this context, “variable” means able to change. The text begins by explaining that güiros are instruments made out of hollowed gourds with ridges cut into their sides and that players scrape the ridges with wooden sticks to produce sounds. The text goes on to say that güiros’ sounds can change depending on gourd thickness, the distance between ridges, and the types of strokes the player uses, thus supporting the idea that the sounds created by these instruments are variable.

Choice A is incorrect because “overlooked” means not being seen or noticed, and there is nothing in the text to suggest that the sounds produced by güiros are overlooked or not noticed. Choice B is incorrect because in this context, “powerful” would mean having a great ability to produce an effect. While it’s possible that the sounds produced by güiros have a strong effect on listeners, the text doesn’t discuss this aspect of their sounds. Choice C is incorrect because “routine” means usual and unvarying, and there is nothing in the text to suggest that the sounds produced by güiros are unvarying. In fact, the text describes how the sounds produced by güiros can differ based on several factors.

Notes

Accept equivalent forms (e.g. $0.25 \equiv 1/4$). For grid-in items, decimal and fraction answers are both valid.
