Q1**B**

- B.** Vietnamese conveys information at approximately the same rate as Spanish despite being spoken at a slower rate.

Choice B is the best answer because it provides the most direct support from the table for the claim that two languages can convey similar amounts of information even if they're spoken at different rates. The table shows the approximate rates at which five languages are spoken and the rates at which those five languages convey information. Vietnamese is spoken at around 5.3 syllables per second, whereas Spanish is spoken at around 7.7 syllables per second, but the two languages convey information at very similar rates: Vietnamese at a rate of around 42.5 bits per second and Spanish at a rate of around 42.0 bits per second. Thus, the description of Vietnamese conveying information at around the same rate that Spanish does despite being spoken more slowly supports the claim in the text that languages can convey the same amount of information even if spoken at different rates.

Choice A is incorrect because it isn't true that Thai and Hungarian have the lowest rates of speech of the five languages shown. According to the table, Hungarian is spoken at around 5.9 syllables per second, which is faster than Vietnamese (5.3 syllables per second). Additionally, even if this statement were true, the assertion that two languages are spoken the slowest and convey information the slowest wouldn't support the claim that languages can convey the same amount of information even if they're spoken at different rates. Choice C is incorrect because it isn't true that the fastest-spoken language (Spanish, at 7.7 syllables per second) also conveys information the fastest: Spanish conveys information at 42.0 bits per second, which is slower than the 42.5 bits-per-second rate at which Vietnamese conveys information. Additionally, even if this statement were true, the assertion that the language spoken the fastest also conveys information the fastest has no bearing on the claim that languages can convey the same amount of information even if they're spoken at different rates. Choice D is incorrect because it isn't true that Serbian conveys information faster than Spanish does. According to the table, Serbian conveys information at a rate of around 39.1 bits per second, which is slower than the 42.0 bits-per-second rate at which Spanish conveys information.

Q2

c

- C. The publishers of the stand-alone volume requested the explanatory notes from the poet in order to make the book attractive to readers who already had a copy of the poem in a journal issue.
-

Choice C is the best answer because it would most directly support the student's claim about the motivation for including explanatory notes with the stand-alone volume of the poem. The text explains that the poem had previously been published without the notes in a quarterly journal. It stands to reason that readers who had purchased the journal issue containing the poem would be unlikely to purchase an unchanged version of the poem in a stand-alone volume. However, the inclusion of notes in that volume would encourage the purchase of a stand-alone volume, since the later text would differ from the original by including the author's own explanation of the poem. Therefore, if it were true that the publishers of the stand-alone volume had requested the notes to make the book attractive to readers who already had a copy of the journal issue, this fact would support the student's claim that the notes were included primarily as a marketing device.

Choice A is incorrect because the student's claim is about the motivation for including the explanatory notes in the stand-alone volume, not about changes that might have been made to the poem itself for publication in that volume; moreover, the text never suggests that such changes were made. Choice B is incorrect because the student's claim is about why the explanatory notes were included in the stand-alone volume, not about how the notes affected readers' and critics' subsequent experience of the poem. Choice D is incorrect because the fact that the poet drafted multiple versions of the explanatory notes doesn't directly address the issue of whether the notes were intended as a marketing device, as the student claims; the correspondence would support this claim only if it showed that the poet had revised the notes specifically to make them useful to the marketing of the stand-alone volume.

Q3

B

- B. saw a greater expansion than *Deschampsia antarctica* did, increasing the area of land it covered by more than half.
-

Choice B is the best answer because it most effectively uses data from the table to complete the comparison of how *Colobanthus quitensis* benefited from warming temperatures with how *Deschampsia antarctica* benefited from them. The table shows the land area covered by these two plant species at a site in Antarctica. According to the table, *Colobanthus quitensis* increased the area it covered by 55% from 2009 to 2018, whereas *Deschampsia antarctica* increased the area it covered by 28% during the same period. It therefore follows that *Colobanthus quitensis* saw a greater expansion than *Deschampsia antarctica* did and that *Colobanthus quitensis* increased the area of land it covered by more than half.

Choice A is incorrect because according to the table, *Deschampsia antarctica* covered 1,230 square meters of land in 2009 and 1,576 square meters of land in 2018. *Deschampsia antarctica* therefore covered a larger, not a smaller, area of land in 2018 than in 2009. Moreover, there's no information in the text or the table that suggests that one species of the plant suppressed the other. Choice C is incorrect because it inaccurately describes the data in the table. The table shows the land area covered by *Colobanthus quitensis* and *Deschampsia antarctica* and the percent increase in area covered by the two species from 2009 to 2018, not the average size of individual plants belonging to the two species. The data in the table therefore can't be used to make a comparison of the increase in individual plants' average size. Choice D is incorrect because the table shows the land area covered by *Colobanthus quitensis* and *Deschampsia antarctica* and the percent increase in area covered by the two species from 2009 to 2018, not the rate at which the species increased the area they covered. Moreover, there's nothing in the table or the text that suggests that the areas covered by the two species were newly freed from ice.

Q4

A

- A. Many surveyed visitors to the Galleria dell'Accademia indicated that the virtual tours convinced them to plan an in-person visit.
-

Choice A is the best answer because it presents a finding that, if true, would most directly support the museum administrators' claim that concerns about virtual tours replacing in-person visits were unjustified. The text explains that after the Galleria dell'Accademia began offering online tours, there were concerns that if people viewed these virtual tours, they would consider an in-person visit to be unnecessary. The finding that many visitors who were surveyed indicated that the virtual tours actually convinced them to plan an in-person visit directly contradicts these concerns. Rather than deterring in-person visits, virtual tours actively encouraged them, providing strong support for the administrators' claim that the initial concerns were unfounded.

Choice B is incorrect. The finding that most surveyed visitors were unaware of the virtual tours before their first in-person visit wouldn't directly address whether virtual tours affect decisions about in-person visits. This finding would only indicate that these particular visitors didn't have the opportunity to be influenced by virtual tours when making their decision to visit. Choice C is incorrect because the geographic location of visitors wouldn't address the impact of virtual tours on people's decisions to visit the museum in person. Whether visitors live in Florence or elsewhere would suggest nothing about whether virtual tours influenced their choice. This information is irrelevant to the administrators' claim about the relationship between virtual tours and in-person visits. Choice D is incorrect because visitors' intentions to view virtual tours after their in-person visit wouldn't address the initial concerns that virtual tours might make in-person visits seem unnecessary. This finding indicates that some visitors plan to use virtual tours as a way to remember their visit, but it provides no information about whether virtual tours influenced their decision to visit in person in the first place, which is what the administrators' claim addresses.

Q5

B

- B. “Dark figures start for work; / I watch them sadly shuffle on, / ’Tis dawn, dawn in New York. / But I would be on the island of the sea, / In the heart of the island of the sea.”
-

Choice B is the best answer because it presents a quotation illustrating the claim that the poem conveys McKay’s contrasting feelings about New York City and Jamaica. McKay first presents a somewhat negative view of New York City, describing watching “dark figures” who “sadly shuffle” to work at dawn, and then indicates that he would instead like to be “in the heart of the island of the sea.”

Choice A is incorrect because the quotation focuses on a description of only one place (New York City, with its “lonely newsboy” and “red streaks” in the sky at dawn) rather than on different feelings about two places. Choice C is incorrect because the quotation focuses on a description of only one place (which isn’t named) rather than on McKay’s different feelings about two places. Choice D is incorrect because though McKay presents a negative image of an unnamed place with “tired cars” that grumble, moan, and groan, and “old milk carts” that rumble by under “dull stars,” the quotation focuses on McKay’s feelings about only one place rather than on different feelings about two places.

Q6

A

- A. Chambi took many commissioned portraits of wealthy Peruvians, but he also produced hundreds of images carefully documenting the peoples, sites, and customs of Indigenous communities of the Andes.
-

Choice A is the best answer because it presents a finding that, if true, would support the claim about Chambi's photographs. The text describes a student advancing the claim that Chambi's photographs "have considerable ethnographic value"—meaning that they are valuable as records of cultures—and that they "capture diverse elements of Peruvian society" in a respectful way. If it's true that Chambi carefully photographed people from a range of different communities in Peru as well as photographed the customs and sites of different communities, that would lend support to the claim that the photographs have ethnographic value as depictions of diverse elements of society in Peru.

Choice B is incorrect because the student's claim is that Chambi's photographs have considerable ethnographic value because they depict diverse elements of Peruvian society; the student doesn't claim anything about the technical skill demonstrated in the photographs. Choice C is incorrect because neither Chambi's reputation nor the locations where his photographs may have been published would be relevant to the student's claim that his photographs are valuable as an ethnographic record of Peru's diverse society. Choice D is incorrect because the popularity among other photographers of the people and places that Chambi photographed would be irrelevant to the student's claim that Chambi's photographs are valuable as an ethnographic record of Peru's diverse society.

Q7

D

- D. "I heard a thousand blended notes, / While in a grove I [sat] reclined, / In that sweet mood when pleasant thoughts / Bring sad thoughts to the mind."
-

Choice D is the best answer because it most effectively illustrates the claim that the speaker has contradictory feelings while experiencing the sights and sounds of spring. This quotation indicates that the speaker is reclined in a grove listening to a thousand sounds. Even though the speaker is in a "sweet mood" and thinking "pleasant thoughts," those pleasant thoughts also bring to mind "sad thoughts." In other words, these lines illustrate the claim that the speaker is having contradictory thoughts while immersed in the sights and sounds of spring.

Choice A is incorrect. Although this quotation refers to several flowers (primroses and periwinkles) and indicates that the speaker is in a "bower," or shady spot among the trees—details which suggest that the speaker is experiencing the sights of spring—it doesn't suggest that the speaker is having contradictory feelings, only that the speaker believes that the flowers are experiencing enjoyment. Choice B is incorrect. Although this quotation focuses on the sights of spring—namely, new leaves on nearby trees appear to be opening up ("The budding twigs spread out their fan") to feel the breeze—the quotation doesn't suggest that the speaker feels conflicted about this: the statement "And I must think, do all I can" suggests the speaker's determination to attribute feelings of pleasure to the trees, not that the speaker is experiencing contradictory feelings. Choice C is incorrect. Although this quotation indicates that the speaker isn't certain what the birds are thinking ("Their thoughts I cannot measure"), there's nothing to suggest that the speaker is experiencing contradictory feelings. Rather, the quotation suggests that although the speaker is uncertain about the birds' feelings, the speaker believes that the birds' movements likely suggest their pleasure.

Q8

C

C. South Korea's annual international tourism revenue decreased from 2016 to 2017.

Choice C is the best answer because it most effectively uses data from the table to complete the text, providing an example that illustrates that the annual increases in international tourism revenue in 2017 and 2018 weren't universal. The table shows the annual spending by international tourists (which indicates annual international tourism revenue) in 2016–2018 in four Asian countries. According to the table, annual spending by international tourists in South Korea was \$21.0 billion in 2016 and then decreased to \$17.2 billion in 2017. This decrease shows that not all of the countries included in the table saw increases in annual international tourism revenue in 2017.

Choice A is incorrect because the table doesn't provide any data regarding revenue from tourism by residents of those countries. Even if that data were provided, it wouldn't be relevant to the claim that the trend of annual increases in international tourism revenue in 2017 and 2018 was not universal. Choice B is incorrect because the data in the table do not support the statement that Japan's international tourism revenue was higher in 2016 than it was in 2018: the table indicates that Japan's annual international tourism revenue was \$33.5 billion in 2016, which is less than Japan's annual international tourism revenue of \$45.3 billion in 2018. Choice D is incorrect. Although the table does indicate that Thailand's revenue from international tourism was higher than that of the other three Asian countries in 2016, 2017, and 2018, this information has no direct bearing on the text's claim that not all the Asian countries represented in the table saw an increase in revenue from international tourism.

Q9

A

- A. In interviews, a number of Latina authors say that *The House on Mango Street* inspired them to write about their own adolescence in their novels.
-

Choice A is the best answer because it presents a finding that, if true, would most strongly support the claim in the underlined sentence. The text begins by explaining that the portrayal of Mexican American culture in Sandra Cisneros's *The House on Mango Street* inspired later authors to explore their own heritage. Noting that Cisneros's novella was also influential for its depiction of a formative year in a female character's youth, the text then claims that this depiction inspired other Latina authors to use fiction to explore their own experiences of youth. Since this claim addresses how Cisneros encouraged Latina authors specifically to portray their youthful experiences, it would be directly supported by such authors stating that her novella influenced them to write about their own adolescence, or the transitional period between childhood and adulthood.

Choice B is incorrect. The text states that with its portrayal of Mexican American culture, *The House on Mango Street* inspired later authors to explore their own heritage, and since this statement isn't limited to only Latina authors, it can be inferred that authors who aren't Latina were also likely influenced by the novella. But because the claim in the underlined sentence concerns the novella's influence on Latina authors specifically, the finding that the book also influenced authors who weren't Latina would fail to provide support for the claim. Choice C is incorrect because the finding that *The House on Mango Street* has sold millions of copies and is widely read among students in the US doesn't relate directly to the text's claim that the novella has influenced Latina authors specifically. Choice D is incorrect. While comparisons of new novels about young Latina characters by Latina authors to Cisneros's *The House on Mango Street* would likely be founded on similarities between those novels and Cisneros's novella, such similarities wouldn't necessarily be evidence of the novella's influence; such similarities might arise if Cisneros and younger Latina authors alike depicted certain basic cultural and historical features of their communities. Testimony from younger Latina authors about how *The House on Mango Street* had inspired them would be far more persuasive evidence of the novella's influence.

Q10

D

D. around 40% urban in 1970 to more than 70% urban in 2020.

Choice D is the best answer. This choice effectively uses data from the graph to complete the example. The line representing the percent of Algeria's population living in cities is the black triangle line. According to the graph, it started at 40% in 1970 and reached 70% in 2020.

Choice A is incorrect. This choice misreads the graph. The line representing the percent of Algeria's population living in cities is the black triangle line. According to the graph, it started at 40% in 1970 and reached 70% in 2020. Choice B is incorrect. This choice misreads the graph. The line representing the percent of Algeria's population living in cities is the black triangle line. According to the graph, it started at 40% in 1970 and reached 70% in 2020. Choice C is incorrect. This choice misreads the graph. The line representing the percent of Algeria's population living in cities is the black triangle line. According to the graph, it started at 40% in 1970 and reached 70% in 2020.

Notes
