Q1**B****B. fluctuations in**

Choice B is the best answer because it most logically completes the text's discussion of solar energy collection and storage. In this context, "fluctuations in" means irregular changes in. The text notes that economists recommend that countries that want to rely more on solar energy (energy captured from sunlight) should attempt to expand their storage capacity. The text goes on to explain that having a large amount of stored solar energy can lessen the negative effect of "unpredictable shifts in cloud cover and haze"—that is, unpredictable changes in environmental conditions that at times limit sunlight. This context suggests that having ample solar energy stored and ready to use can mitigate the issue of fluctuations in solar energy collection caused by irregular patterns of sunlight availability.

Choice A is incorrect because in this context, "developments of solar energy collection" would most clearly refer to the creation of ways to collect solar energy (energy captured from sunlight). The text focuses on collection and the idea that having stored energy can mitigate, or make less bad, the effects of a problem caused by unpredictable changes that affect sunlight ("cloud cover and haze"); there's no reason to think that the creation of new collection methods would be viewed as a problem that would need to be mitigated. Choice C is incorrect because in this context, "calibrations with" would most clearly refer to precise adjustments for a particular purpose. The text focuses on the collection of solar energy (energy captured from sunlight) and the idea that having stored energy can mitigate, or make less bad, the effects of a problem caused by unpredictable changes that affect sunlight ("cloud cover and haze"); there's no reason to think that precision in something related to solar energy collection would be viewed as a problem that would need to be mitigated. Choice D is incorrect. The text focuses on the collection of solar energy (energy captured from sunlight) and the idea that having stored energy can mitigate, or make less bad, the effects of a problem caused by unpredictable changes that affect sunlight ("cloud cover and haze"); nothing in the text suggests that "incentives for," or rewards for, solar energy collection would be viewed as a problem that would need to be mitigated, especially in countries that want to rely more on solar energy than they already do.

Q2

B

B. marginalize

Choice B is the best answer because it most logically completes the text's discussion of how historians have treated rank-and-file (ordinary) workers in their analyses. In this context, "marginalize" means treat as unimportant or relatively powerless within a group or society. The text explains that according to Austin McCoy, historians have tended to treat "political, business, and labor leaders" as the "major actors" involved in making changes in organized labor in the period after the Second World War. By emphasizing the contributions of these leaders, historians have in effect minimized the contributions of ordinary workers, treating them as relatively unimportant and "nearly devoid of agency," thereby marginalizing them.

Choice A is incorrect. In this context, "epitomize" would mean either serve as an ideal example of something or make into an example of something, neither of which would make sense. In stating that historians have tended to characterize political, business, and labor leaders as the primary actors responsible for changes in the post-Second World War labor movement in a manner that minimizes the influence of ordinary workers, the text suggests that historians have tended to present ordinary workers as unimportant to or uninfluential within the movement, not that historians themselves serve as examples of ordinary workers, or that historians in their analyses have made ordinary workers into examples of the changes that occurred. Choice C is incorrect because in this context, "extol" would mean praise highly or glorify. The text states that historians have tended to present ordinary workers as being "nearly devoid of agency," thereby minimizing their importance. It therefore wouldn't make sense to say that in doing so, historians have tended to praise or glorify them. Choice D is incorrect because "substantiate" would mean verify with evidence, and nothing in the text suggests that historians have verified rank-and-file workers or their contributions in their analyses. If anything, the text suggests the opposite, implying that by minimizing workers' agency in organized labor, historians have likely overlooked evidence demonstrating their influence.

Q3

B

B. rectify

Choice B is the best answer because it most logically completes the text's discussion of how Maggie Lena Walker addressed the lack of financial services available to Black residents in Richmond, Virginia, at the turn of the twentieth century. In this context, "rectify" means to correct or remedy something undesirable. The text indicates that by chartering the St. Luke Penny Savings Bank in 1903, Walker took action to provide local Black residents with greater access to financial services like home loans and savings opportunities. This context supports the idea that she aimed to rectify the undesirable situation affecting these residents.

Choice A is incorrect because in this context, "prolong" would mean to lengthen something in time. The text indicates that at the turn of the twentieth century, Black residents in Richmond, Virginia, were faced with a lack of formal banking options. The text then states that Walker founded a new bank that provided these residents with financial services. Therefore, instead of prolonging the situation, she took steps to rectify, or correct, it. Choice C is incorrect because in this context, "retain" would mean to continue to have or to keep something. According to the text, at the turn of the twentieth century, Black residents in Richmond, Virginia, had few formal banking options, and Walker chartered a new institution to provide these residents with expanded financial services; therefore, she took steps to rectify, not retain, the situation. Choice D is incorrect because in this context, "highlight" would mean to emphasize or call attention to something, but the text indicates that Walker took concrete steps beyond merely drawing attention to the situation Black residents were facing in Richmond, Virginia, at the turn of the twentieth century. According to the text, Walker worked to rectify, or correct, the lack of formal banking options that were available to these residents by establishing a bank that provided them with home loans and savings opportunities.

Q4

A

A. recognizable

Choice A is the best answer because it most logically completes the text’s discussion about handedness in animals. As used in this context, “recognizable” means apparent or identifiable. The text indicates that handedness is “easy to observe in humans,” but that animal-behavior researchers use special tasks to determine handedness in other animals. This context and the use of “less” before the blank indicate that compared with handedness in humans, handedness in other animals is less recognizable.

Choice B is incorrect because there’s nothing in the text to suggest that handedness is less “intriguing,” or fascinating, in nonhuman animals than it is in humans. The text focuses on how easy it is to observe handedness in humans as compared with other animals; the text doesn’t suggest that handedness is more fascinating in humans. Choice C is incorrect because there’s nothing in the text to suggest that handedness is less “significant,” or important or meaningful, in nonhuman animals than it is in humans. The text focuses on how easy it is to observe handedness in humans as compared with other animals; the text doesn’t suggest that handedness is more significant in humans. Choice D is incorrect because “useful,” or functional or helpful, wouldn’t make sense in context. The text focuses on the ease with which researchers can determine whether an animal or person is right- or left-handed, not on how useful handedness in nonhuman animals is compared with handedness in humans.

Q5

D

D. invalidate

Choice D is the best answer because it most logically completes the text’s discussion of the economist’s claim about sales of personal electronic devices. In this context, “invalidate” most nearly means nullify or make invalid. The text indicates that interruptions in the supply of microchips for personal electronics “have challenged” the economist’s claim that sales of personal electronics will show strong growth in the coming months. The text goes on to clarify the effect of the delays on the economist’s projection, stating that the delays are very likely to extend the time frame over which the projected growth in sales will occur. This context suggests that the delays are unlikely to invalidate the economist’s projection entirely—the delays will probably alter the time frame of the projection, not nullify it or make it invalid.

Choice A is incorrect because saying that the delays are unlikely to “dispute,” or argue against, the economist’s projection wouldn’t make sense. Since the delays are an inanimate circumstance, they couldn’t argue against a prediction about the sales of personal electronics. Choice B is incorrect because saying that the delays are unlikely to “withdraw,” or remove from consideration, the economist’s projection wouldn’t make sense. Although the economist could withdraw her projection because of the delays, the delays themselves couldn’t withdraw her projection since they’re an inanimate circumstance and thus can’t choose to remove something from consideration. Choice C is incorrect because there’s nothing in the text to suggest that the delays will “underscore,” or emphasize, the economist’s projection. Instead, the text suggests that the delays are likely to extend the time frame of the economist’s projection but not to undermine the projection entirely.

Q6

C

C. neglect

Choice C is the best answer because it most logically completes the text’s discussion of election polling. In this context, to “neglect” would mean to disregard or pay insufficient attention to something. The text states that there have been many cases of election pollsters incorrectly predicting presidential elections and then says that neuroscientist and pollster Sam Wang notes that campaigns shouldn’t react to these failures in a certain way. The text then adds that polls are valuable for informing strategists’ efforts throughout campaigns, not just for predicting the outcome. This context conveys that Wang’s advice is not to neglect, or disregard, polling because even though it sometimes fails to predict the winner, it can help improve campaign strategies.

Choice A is incorrect. In this context, to “distort” would mean to give a false or misleading account. Though the text states that many election pollsters have failed in their predictions in presidential elections, it gives no indication that Wang would therefore argue that campaigns shouldn’t react to such polling failures by giving inaccurate accounts of election polling. Instead, the text emphasizes that polls have value beyond predicting winners, suggesting that Wang’s point is that campaigns shouldn’t stop polling entirely. Choice B is incorrect because it wouldn’t make sense to suggest that Wang encourages campaigns not to “enact,” or establish, election polling; the text indicates that election polling is something that already takes place and that has value for campaign strategies even if it sometimes leads to inaccurate predictions of winners, suggesting an argument in favor of continuing to use election polling. Choice D is incorrect. Although the text indicates that many election pollsters have failed in their predictions in presidential elections, there’s no reason to think Wang would say that these failures should lead campaigns *not* to “supplement,” or add to, election polling; it would be reasonable to suggest that campaigns *would* want to consider more than just election polling information if that information may lead to inaccurate predictions. Moreover, the text’s main point is that polls provide some utility even if their predictions may be inaccurate, which suggests that Wang’s recommendations pertain to whether campaigns should or shouldn’t use polling data, not whether polling data should or shouldn’t be supplemented with other kinds of information.

Q7

A

A. indulge

Choice A is the best answer because it most logically completes the text's discussion of the Roman emperor Marcus Aurelius. In this context, "indulge" means treat with excessive leniency. The text states that according to historian Edward Gibbon, Marcus Aurelius, who was widely considered virtuous, had only a single character flaw: his mild temperament. The text suggests that because of this flaw, Marcus Aurelius had an overly permissive nature. This context, in turn, supports the idea that Marcus Aurelius treated the vices, or evils, of those around him with excessive leniency, indulging rather than punishing those vices.

Choice B is incorrect. While the text does state that Marcus Aurelius was widely considered virtuous, it gives no indication that he was inclined to "despise," or hate, others' vices. Rather, the text suggests that he showed undue tolerance for these vices because of his overly permissive nature—that is, his inclination to allow others to do as they wished. Choice C is incorrect because the text's description of Marcus Aurelius as overly permissive suggests that he showed undue tolerance for others' vices, not that he tried to "moderate" those vices, or lessen their intensity. Choice D is incorrect because the text's description of Marcus Aurelius as overly permissive suggests that he showed undue tolerance for others' vices, not that he attempted to "criticize," or speak disapprovingly of, those vices.

Q8

D

D. An extraordinary

Choice D is the best answer because as used in the text, “singular” most nearly means extraordinary. The text portrays an experiment in which a character rehydrates a dried rose by infusing it with moisture. After prolonged contact with the liquid, the rose begins to absorb it, undergoing an exceptional transformation: its color deepens, its previously “crushed and dried” petals shift, and the entire flower revives “from a deathlike slumber.” In other words, an extraordinary change is visible in the flower.

Choice A is incorrect. Although in some contexts “singular” can mean of or relating to an individual or to a single instance of something, this usage doesn’t imply loneliness or an otherwise unsatisfactory condition of isolation. Moreover, the text doesn’t attribute such a condition to the rose. Choice B is incorrect. Although “singular” has several related meanings, none of them relate to being disagreeable or unpleasant. Moreover, the text doesn’t portray the change undergone by the rose as necessarily disagreeable. Choice C is incorrect because “singular” means extraordinary, not acceptable. The change is portrayed as striking, not barely satisfactory.

Q9

A

A. insurmountable

Choice A is the best answer because it most logically completes the text's discussion of the difficulty in naming a large number of minor planets. In this context, "insurmountable" means impossible to overcome or too difficult to solve. The text establishes that coming up with distinct names for minor planets is already a difficult task that has become even more challenging because there are now more than 500,000 known minor planets. The logical conclusion is that finding unique names for such a vast number of celestial objects has become virtually impossible—or insurmountable—which explains why the majority of recently discovered minor planets receive only identification numbers instead of proper names.

Choice B is incorrect because "feasible" means possible to do or achieve, which would contradict the logic of the text. The text indicates that the task of naming minor planets has become more difficult because of their large number. The text then explains that this is why most new discoveries receive only identification numbers. If the task were feasible, there would be no reason to abandon the practice of giving proper names to minor planets in favor of using only numbers. Choice C is incorrect because "substantial" means considerable in size, amount, or importance. While the text does suggest that naming all minor planets would be a significant undertaking, describing the task as substantial wouldn't logically explain why the naming practice has been largely abandoned in favor of using only identification numbers. The text suggests that the task has become virtually impossible (insurmountable), not merely large or significant. Choice D is incorrect because "unnecessary," which means not needed, would suggest that giving proper names to minor planets serves no purpose. However, the text doesn't question the value or purpose of naming minor planets; rather, it explains that the sheer number of discoveries has made the already challenging naming task nearly impossible to complete. The text provides an example of a named minor planet (1227 Geranium), indicating that naming has been considered worthwhile but has become impractical because of the volume.

Q10

B

B. irrelevant

Choice B is the best answer because it most logically completes the text's discussion about people's tendency to dismiss claims from sources perceived as self-interested, or acting for their own advantage. In this context, "irrelevant" means not applicable to the matter at hand. The text explains that as a matter of logical reasoning, the source of a claim has nothing to do with the claim's truthfulness—a claim is either true or false in actuality, regardless of where it originates. This context suggests that even though people may distrust a claim based on its source, the source of the claim is actually irrelevant.

Choice A is incorrect because in this context, "indistinct" would mean uncertain or not clearly recognizable. Instead of suggesting that the source of a claim can't be determined with certainty, the text suggests that recognizing a source and having an opinion of it simply doesn't matter because as a matter of logic, a claim is true or false in actuality, regardless of where it originates. Choice C is incorrect because in this context, "indisputable" would mean impossible to question or deny. Although the text suggests that it isn't logical to assume a claim is false just because its source appears to be self-interested, it doesn't go so far as to suggest that the source of a claim can't be questioned—the text instead makes the point that from a logical standpoint, the source of a claim doesn't matter because the claim is either true or false in and of itself. Choice D is incorrect because in this context, "implicit" would mean suggested or understood without being directly expressed. Nothing in the text suggests that logically, the source of a claim is only suggested; instead of addressing whether sources can be directly identified, the text focuses on the idea that sources don't matter because a claim is true or false in actuality, regardless of where it originates.

Notes

Accept equivalent forms (e.g. $0.25 \equiv 1/4$). For grid-in items, decimal and fraction answers are both valid.
