Q1**A****A. reduced**

Choice A is the best answer because it most logically completes the text's discussion of how the flow of information between two regions of the brain may affect the ease of people's decision making. In this context, "reduced" means decreased. The text presents the finding from a team of neuroeconomists that decision making may be connected to communication between the prefrontal cortex and the parietal cortex. In presenting this finding, the text suggests a contrast between people who tend to be more decisive and people who make decisions more slowly. According to the text, people tend to be more decisive when the flow of information between the two brain regions is intensified, or strengthened. On the other hand, this context suggests that people make choices more slowly when the flow of information between the two brain regions is decreased.

Choice B is incorrect because "evaluated" means assessed, which wouldn't make sense in context. According to the text, people tend to be more decisive when the flow of information between two brain regions is intensified, or strengthened. This suggests that people's ease of decision making varies based on the rate of information traveling between the regions, not based on an effort to assess the information. Choice C is incorrect because "determined" means judged or influenced, neither of which would make sense in context. According to the text, people tend to be more decisive when the flow of information between two brain regions is intensified, or strengthened. This suggests that people's ease of decision making varies based on the rate of information traveling between the regions, not based on an effort to judge or influence the information. Choice D is incorrect because "acquired" means developed or attained, neither of which would make sense in context. According to the text, people tend to be more decisive when the flow of information between two brain regions is intensified, or strengthened. This suggests that people's ease of decision making varies based on the rate of information traveling between the regions, not based on the development or attainment of the information.

Q2

C

C. comprises

Choice C is the best answer because it most logically completes the text’s discussion of Gardley’s play. In this context, “comprises” means constitutes or makes up the totality of, and the text indicates that *The House That Will Not Stand* had an “all-female cast” that stands in some relationship to “an array of female characters” in the play. Because all cast members are female, the characters must be played by these female cast members; therefore the cast constitutes, or comprises, the collection of characters.

Choice A is incorrect. In this context, “engulfs” would mean encloses or overwhelms, and although it is fairly common to describe an actor as embodying (or personifying realistically) a character, there is nothing in the text to suggest that the cast members enclosed or overwhelmed the characters they played. Choice B is incorrect because in this context, “encourages” would mean inspires with courage or hope. Although the text does mention “a strong mother and several daughters dealing with individual struggles,” which might suggest that there are moments of encouragement among the characters during the play, there is nothing to suggest that the cast members encouraged the characters they portrayed. Choice D is incorrect because, in this context, “provokes” would mean instigates or incites to anger. Nothing in the text addresses provocation or what it might mean for actors to provoke the characters they are playing.

Q3

C

C. advantageous

Choice C is the best answer because it most logically completes the text's discussion of businesses being featured in *The Illustrated History of San Mateo County*. In this context, "advantageous" means beneficial or providing a favorable position. The text explains that being included in the book "suggested that a business was an important part of the community," and it can be inferred that an enhanced reputation within the local community would benefit a business, commercially or otherwise. This context supports the idea that being featured in this publication would be advantageous.

Choice A is incorrect because in this context, "risky" would suggest that being featured in *The Illustrated History of San Mateo County* might have negative consequences for a business. However, the text implies only positive outcomes since inclusion indicated importance within the local community. Choice B is incorrect because "misleading" would mean deceptive or deliberately giving a wrong impression, but the text doesn't indicate there was something deceptive about being featured in *The Illustrated History of San Mateo County*; rather, it suggests that inclusion indicated community importance. Choice D is incorrect because "unremarkable" would mean common or ordinary, which doesn't make sense in context. The text suggests that inclusion in *The Illustrated History of San Mateo County* instead conferred a special status on a business by conveying its importance in the local community.

Q4

B

B. diminish

Choice B is the best answer because it most logically completes the text's discussion of birdsong. In this context, "diminish" means reduce or lessen. The text establishes that birds sing to communicate over potentially large distances and that researchers believe that birds that live in densely vegetated habitats sing at lower frequencies than birds that live in comparatively sparsely vegetated habitats. The text then explains that researchers hold this belief due to some effect of dense vegetation on the distance that high-frequency sounds can travel. If birds sing to communicate over long distances, it would be logical to conclude that researchers believe that birds in densely vegetated habitats sing at lower frequencies than birds in relatively sparse habitats do because dense vegetation diminishes the distance that high-frequency sounds can travel.

Choice A is incorrect because nothing in the text suggests that dense vegetation can "exceed," or surpass or go beyond, the distance that high-frequency sounds can travel. The text suggests that dense vegetation reduces the distance that high-frequency sounds can travel, not that dense vegetation goes farther than that distance. Choice C is incorrect because it would not be sensible to say that dense vegetation can "encompass," or enclose or encircle, the distance that high-frequency sounds can travel. The distance that sounds can travel is not an object that can be enclosed or encircled by vegetation. Choice D is incorrect because there is no information in the text indicating that dense vegetation can "conceal," or hide or keep from being observed, the distance that high-frequency sounds travel. Instead, the text suggests that dense vegetation reduces the distance that high-frequency sounds can travel.

Q5

D

D. accessible

Choice D is the best answer. When talking about a thing, “accessible” means “easy to understand.” This sets up the contrast in the next sentence, which tells us that critics mostly focus on art that is “cryptic or challenging” (meaning not easy to understand).

Choice A is incorrect. This doesn’t fit the logic of the text. The next sentence tells us that critics focus on art that is mysterious and challenging. If Hannock’s paintings are “innovative” (meaning advanced and original), then critics probably would comment on them. Choice B is incorrect. This doesn’t fit the logic of the text. The next sentence tells us that critics focus on art that is mysterious and challenging. If Hannock’s paintings are “subversive” (meaning disruptive and revolutionary), then critics probably would comment on them. Choice C is incorrect. This doesn’t fit the logic of the text. The next sentence tells us that critics focus on art that is mysterious and challenging. If Hannock’s paintings are “profound” (meaning very deep and insightful), then critics probably would comment on them.

Q6

D

D. consensus

Choice D is the best answer because it most logically completes the text's discussion of US forest land classifications. In this context, "consensus" means agreement. The text indicates that a percentage given in a US forest land report differs from other estimates and that this discrepancy isn't surprising, given that forest researchers regularly dispute one another's classifications of parts of US forest land as either mature or old growth. This context conveys that there is little agreement when it comes to these categories.

Choice A is incorrect because the text states that there is often dispute among forest researchers about classifications of US forest land as either mature or old growth, which directly indicates that when it comes to these categories, there is much "deliberation," or discussion and consideration, not little deliberation. Choice B is incorrect because the text indicates that there is often dispute among forest researchers about classifications of US forest land as either mature or old growth; this doesn't imply that there is little "vigilance," or careful attention, among researchers when it comes to these categories but rather conveys that researchers do pay attention to forest land classifications and question one another's decisions. Choice C is incorrect because the text indicates that there is often dispute among forest researchers about classifications of US forest land as either mature or old growth; this doesn't imply that there is little "interest," or concern, among researchers when it comes to these categories but rather conveys that researchers are concerned with forest land classifications and pay attention to one another's classifications.

Q7

B

B. rudimentary

Choice B is the best answer because it most logically completes the text’s discussion of single-celled organism behavior. As used in this context, “rudimentary” means basic or unsophisticated. According to the text, a study of the single-celled protozoan *Stentor roeseli* showed that the organisms can switch strategies for escaping certain stimuli, “sophisticatedly ‘changing their minds’” and using new strategies should other strategies fail. This context suggests that single-celled organisms may not be limited to behaviors that are basic or rudimentary, since the study showed that single-celled protozoans can respond complexly to irritating stimuli.

Choice A is incorrect because the text doesn’t suggest that single-celled organisms may not be limited to behavior that is “aggressive,” or threatening. Rather, the text suggests that single-celled organisms may not be limited to behaviors that are basic, since the study of *Stentor roeseli* showed that single-celled protozoans can respond complexly to irritating stimuli. Choice C is incorrect because the text doesn’t suggest that single-celled organisms may not be limited to behavior that is “evolving,” or advancing. Rather, the text suggests that single-celled organisms may not be limited to behaviors that are basic, since the study of *Stentor roeseli* showed that single-celled protozoans can respond complexly to irritating stimuli. Choice D is incorrect because the text doesn’t suggest that single-celled organisms may not be limited to behavior that is “advantageous,” or helpful. Rather, the text suggests that single-celled organisms may not be limited to behaviors that are basic, since the study of *Stentor roeseli* showed that single-celled protozoans can respond complexly to irritating stimuli.

Q8

C

C. impede

Choice C is the best answer. The first sentence tells us that video meetings are “less conducive to” (meaning less good for) brainstorming. This suggests that the video meeting participants’ focus is bad for their creativity. “Impede” means “delay” or “prevent,” which works perfectly in this context.

Choice A is incorrect. This choice is too positive to fit the context. The first sentence tells us that video meetings are “less conducive to” (meaning less good for) brainstorming. This suggests that the video meeting participants’ focus is bad for their creativity. Choice B is incorrect. This choice doesn’t make sense. The participants’ intense focus on the screen is the subject of the missing verb. It wouldn’t make sense to say that their over-focusing “criticizes” their creativity. Choice D is incorrect. “Construct” means “build” or “make,” which is too positive to fit the context. The first sentence tells us that video meetings are “less conducive to” (meaning less good for) brainstorming. This suggests that the video meeting participants’ focus is bad for their creativity.

Q9

D

D. an oddity

Choice D is the best answer because it most logically completes the text's discussion of the duration of gamma ray burst GRB 230307A. In this context, "an oddity" is something that is odd or unusual. The text explains that the burst lasted for 200 seconds and that other bursts generated by neutron mergers have usually lasted fewer than 2 seconds. In other words, the duration of gamma ray burst GRB 230307A was unusual.

Choice A is incorrect because the text focuses on a difference between the duration of gamma ray burst GRB 230307A and the typical duration of bursts caused by neutron mergers, not "a coincidence," or a point of correspondence, between them; the text indicates that GRB 230307A lasted much longer than what is typical of other bursts. Choice B is incorrect. In this context, "a reprieve" would be either a temporary relief from something or a delay of a punishment, neither of which would make sense as something that the duration of a gamma ray burst could provide to the burst itself. Choice C is incorrect. Although it would make sense to refer to gamma ray burst GRB 230307A itself as "an incident," or a thing that occurred, the missing word describes the duration of the burst, and it doesn't make much sense to describe a length of time as an incident. Further, the sentence emphasizes that the burst's duration was very unusual, not simply that the burst occurred.

Q10

B

B. ambivalence toward

Choice B is the best answer because it most logically completes the text’s description of how Pico feels about the natural world. In this context, to say that Pico portrays his “ambivalence toward” nature would mean that he portrays his mixed feelings about nature. The text explains that Pico “honors the centrality of nature” and also makes it clear that he doesn’t enjoy being in nature. This context suggests that Pico feels ambivalence toward nature.

Choice A is incorrect because saying that Pico portrays his “responsiveness to” nature would mean that he portrays himself as quick to react to nature, which isn’t supported by the text. Instead, the text focuses on Pico’s mixed feelings toward nature, describing him as both honoring nature’s role in his tribe’s beliefs and expressing his personal dislike for being in nature. Choice C is incorrect because saying that Pico portrays his “renunciation of” nature would mean that he portrays himself as rejecting nature, which isn’t supported by the text. The text conveys that Pico demonstrates both positive and negative responses toward nature, not that he’s giving it up completely. Choice D is incorrect because saying that Pico portrays his “mastery over” nature would mean that he portrays himself as having control over nature, which isn’t supported by the text. The text focuses on Pico’s mixed feelings about nature; nothing in the text suggests that Pico feels mastery over nature.
